High Temperature Garolite (G-11)

- Color: Opaque green to greenish brown
- Max. Temperature: 335°F
- Tensile Strength: Excellent
- Impact Strength: Excellent
- Electrical Insulator: Excellent
- Machine: Use diamond-tipped tooling
- Hardness: Rockwell M110-M115

Suitable for continuous use in elevated temperatures, this fiberglass-based material retains at least 50% of its structural strength at temperatures above 300°F. It is sometimes called epoxy-grade industrial laminate and phenolic. Meets UL 94HB for flame retardance and MIL-I-24768/3.

Sheets—Smooth Finish

Width and length tolerances are ±1/2″ for 6″×6″ sheets and ±1″ for all other sizes. Flatness tolerance is not rated.

Ultra High Temperature Garolite (G-7)

- Color: Opaque off-white to light green
- Max. Temperature: 425° F
- Tensile Strength: Excellent
- Impact Strength: Excellent
- Electrical Insulator: Good
- Machine: Use diamond-tipped tooling
- Hardness: Rockwell M67-M105

Not only heat- and arc-resistant, this material also has good electrical insulating properties. It has a fiberglass-fabric base and is sometimes called silicone-grade industrial laminate, phenolic, and Bakelite. Meets MIL-I-24768/17 and UL 94V0 for flame retardance.

Sheets—Smooth Finish

Width and length tolerances are ±1″, except 4″×6″ sheets are ±½″. Flatness tolerance is not rated.

High-Strength Lightweight Carbon Fiber

- Color: Opaque black
- Max. Temperature: 180° F
- Tensile Strength: Excellent
- Impact Strength: Not rated
- Electrical Insulator: Not rated
- Machine: Use carbide tooling
- Hardness: Not rated

The carbon-fiber base of this material creates a strong, lightweight laminate with a sleek, attractive finish.

Also Available: Adhesive for use with carbon fiber. Please ask for 1813A243.

Carbon Fiber, Carbon Foam & Graphite

For additional information about carbon fiber, including mechanical and physical properties, go to mcmaster.com and search for **8549KAC**.

High Temperature Carbon Fiber

- Color: Opaque black
- Max. Temperature: 420° F
- Tensile Strength: Excellent
- Impact Strength: Not rated
- Electrical Insulator: Not rated
- Machine: Use carbide tooling
- Hardness: Rockwell M120

This composite of carbon fiber and high-strength plastic is resistant to chemicals as well as high temperatures. When heated to approximately 575° F, material can be formed.

Rectangular Bars—Smooth Finish

Thick. tolerance is ±0.017″ for 0.17″ thick bars and ±0.026″ for 0.26″ thick bars. Wd. and lg. tolerances are ±1/16″. Straightness tolerance is not rated.

Extreme High Temperature Carbon Fiber

- Color: Opaque black
- Max. Temperature: 750° F
- Tensile Strength: Excellent
- Impact Strength: Not rated
- Electrical Insulator: Not rated
- Machine: Use carbide tooling
- Hardness: Not rated

Also known as Carbon/Carbon, this material consists of carbon fiber reinforced with carbon to provide extra strength and durability. It won't deform or warp in extreme temperatures, making it well suited for fabricating furnace elements, studs, nuts, and jigs. Diameter tolerance is ±0.01″, and length tolerance is ±1/2″. Straightness tolerance is not rated. Finish is smooth. Maximum temperature in oxygen-free environments is 3630° F.

Dia.	12″ Length		39″ Length

Carbon Foam

- Color: Opaque charcoal gray
- Max. Temperature: 600° F
- Tensile Strength: Poor
- Impact Strength: Not rated
- Electrical Insulator: Not rated
- Machine: Use carbide tooling
- Hardness: Not rated

Often used in insulating, filtering, and electrical applications, this brittle foam resists high temperatures and chemicals. Sheets have an open-pore construction that allows fluid and air to flow through—the fewer pores per square inch (PPI), the greater the flow. Finish is textured. In oxygen-free environments, max. temperature is 6300° F.

To Order: Please specify flow rate: low flow (100 PPI), medium flow (60 PPI), or high flow (20 PPI).

Thick.	3″×3″		6″×6″		12″×12″	
1/4″	3947K11	$30.00	3947K14	$47.62	3947K17	$102.00

High Temperature Conductive Graphite

- Color: Opaque black
- Max. Temperature: 800° F
- Tensile Strength: Good
- Impact Strength: Not rated
- Electrical Insulator: Not rated
- Machine: Use carbide tooling
- Hardness: Not rated

The very fine grain of this graphite adds strength and density to this conductive, heat-resistant material. It is often used in applications that require resistance to high temperatures, such as fabricating furnace parts, and to manufacture crucibles or ingot molds because it does not adhere to metal. When oxygen is not present, the maximum temperature of this material is 5000° F.

Rectangular Bars—Smooth Finish

Grain size is 0.0004″. Thickness tolerance is ±0.005″. Width and length tolerances are +1/8″.

Thick.	Wd.	3″ Length		6″ Length		12″ Length	
1/4″	1/4″	1763T11	$7.31	1763T21	$8.02	1763T31	$15.03

Very High Temperature Mica

- Color: Opaque silver with brown spots, except clear film
- Max. Temperature: 930° F
- Electrical Insulator: Excellent
- Machine: Use carbide tooling
- Hardness: Not rated

Often used in thermal and electrical insulation, this material is also known as muscovite mica and is composed of laminated aluminum silicate and potassium, except clear film is not laminated. *Sheets* and *opaque film* meet UL 94V0 for flame retardance.

Sheets

Width and length tolerances are +0.635″, –0.015″.

Ultra High Temperature Mica

- Color: Opaque green with brown spots
- Max. Temperature: 1290° F
- Electrical Insulator: Excellent
- Machine: Use carbide tooling
- Hardness: Not rated

Use this material in circuit breakers, heating elements, and other applications that require resistance to extremely high temperatures. Also known as phlogopite and amber mica, material is made of aluminum silicate with magnesium and a high-temperature silicone-based binder. Meets UL 94V0 for flame retardance.

Wire-Reinforced Glass

- Color: Clear
- Temperature Range: Not rated
- Machine: Use glass-cutting tools
- Annealed

Standard glass has ±1/16″ width and length tolerances and a +0.047″ thickness tolerance. Edges are cut.

Fire- and safety-rated glass is coated with a safety film that increases the glass's impact resistance, allowing it to meet Consumer Product Safety Commission Cat. I and II. Also meets UL 9, 10B, and 10C, as well as NFPA 80, 252, and 257. Thickness, width, and length tolerances are ±1/16″. Edges are cut.

Heat-Resistant Borosilicate Glass

- Color: Clear
- Max. Temperature: 445° F, except tempered circular sight glasses are 500° F
- Machine: Use glass-cutting tools
- Annealed, unless noted

Also known as Pyrex and Schott glass, this glass resists clouding and pitting and is highly chemical and heat resistant. With a low rate of thermal expansion, it also stays dimensionally stable during changes in temperature. Meets MIL-G-47033, except balls do not.

Sheets

1/8″ to 1/4″ thick sheets have cut edges; 3/8″ to 3/4″ thick sheets have ground edges. Width and length tolerances are ±0.062″. Thickness tolerance is ±0.008″ for 1/8″ to 1/4″ thick sheets, ±0.011″ for 3/8″ thick sheets, and ±0.019″ for 5/8″ and 3/4″ thick sheets. **To Order:** Please specify thickness.

Also Available: Other sheet sizes. Please ask for 8476K81 and specify thickness, width, and length.

Very High Temperature Heat-Resistant Silica Glass

- Color: See below
- Max. Temperature: 1650° F
- Machine: Use carbide tooling
- Annealed

Consisting of 96% silica, this glass resists rapid and extreme temperature changes better than borosilicate glass. Sometimes called Vycor, these discs are commonly used as sight glasses in furnace applications.

Clear Discs

Edges are ground. Diameter tolerance is ±0.010″, and thickness tolerance is ±0.005″.

Very High Temperature Heat-Resistant Glass Ceramic

- Color: Transparent light rose
- Max. Temperature: 1255° F
- Machine: Use diamond tooling
- Annealed

Combining the transparency of glass with the high heat resistance of ceramics, this material offers good resistance to rapid temperature changes. Edges are cut. Thickness tolerance is ±0.016″, and width and length tolerances are ±0.062″.

Extreme Temperature Quartz Pure Glass

- Color: Clear
- Max. Temperature: 2100° F
- Machine: Use diamond tooling
- Annealed

Containing 99.995% silicon dioxide, this glass provides excellent UV transmission, as well as high transmission in the visible and infrared ranges. Use in high-intensity lighting, fiber-optic production, and optical lens systems. All sides are ground and polished. Diameter tolerance is ±0.010″; thickness tolerance is +0.005″.

Easy-to-Machine Glass-Mica Ceramic

- Color: See below
- Max. Temperature: See below
- Machine: Use carbide tooling
- Electrical Insulator: Excellent, except very high temperature sheets are good
- Porosity: Nonporous
- Compressive Strength: 32,000 to 50,000 psi

Machine complicated shapes and precision parts from this material, which doesn't require firing before use, in a fraction of the time it would take using fired ceramics. Use standard metalworking tools to machine. Its good electrical and thermal resistance make it a common choice for heating and soldering fixtures.

High Temperature Sheets

- Color: Opaque light gray
- Max. Temperature: 930° F

Also known as Mykroy/Mycalex. Thickness tolerance is ±0.015″, and width and length tolerances are ±1/8″.

Electrical-Insulating Boron-Nitride Ceramic

- Color: Opaque white
- Max. Temperature: 1020° F
- Machine: Use carbide tooling
- Electrical Insulator: Excellent
- Porosity: 7%
- Compressive Strength: 16,000 to 18,000 psi

Used primarily in high-power electrical applications for its excellent electrical insulating properties, this material also resists changes in temperature and is often used in arc welding and semiconductor equipment. Also known as white graphite, this ceramic has a slippery feel due to its low coefficient of friction.

High Temperature Machinable Alumina Bisque Ceramic

- Color: Opaque white
- Max. Temperature: 2475° F
- Machine: Use carbide tooling
- Electrical Insulator: Poor
- Porosity: 36%
- Compressive Strength: 9,000 psi

Often used to create prototype components, this ceramic is chemical and temperature resistant and comes semifired so it can be machined using conventional metalworking tools. Material can be fully fired to create a denser, harder material with increased electrical and mechanical properties. Shrinks 15% to 18% when fired.

Sheets

Alumina Silicate Ceramic

- Color: Opaque light gray
- Max. Temperature: 2010° F
- Machine: Use carbide tooling
- Electrical Insulator: Poor
- Porosity: 2% to 3%
- Compressive Strength: 25,000 psi

Also known as lava and wonderstone, this material is often used in applications that require corrosion resistance and low thermal expansion, such as in standoffs and welding jigs. Material is unfired but can be fully fired to increase strength and hardness if the sheets have been machined to 1/4″×6 1/2″×6 1/2″ or smaller and if rods or square bars have been machined to 1/2″×12″ or smaller.

Sheets

Very High Temperature Nonporous High-Alumina Ceramic

- Color: Opaque white
- Max. Temperature: 3075° F, except balls are 2000° F
- Machine: Use diamond grinding wheel
- Electrical Insulator: Poor
- Porosity: Nonporous
- Compressive Strength: 300,000 psi

Seal out air and gas in high-temperature and high-wear applications. This ultrahard ceramic can also be used in applications that require superior strength and corrosion resistance. Even after machining, no additional firing is required.

Rectangular Bars and Sheets

Width tolerance is ±0.008″ for rectangular bars and ±10% for sheets. Length tolerance is ±1/4″, except 6 1/4″ and 8 1/2″ lengths are ±7/16″.

Very High Temperature Machinable High-Alumina Ceramic

- Color: Opaque white
- Max. Temperature: 3000° F
- Machine: Use carbide tooling
- Electrical Insulator: Excellent
- Porosity: 48%
- Compressive Strength: 4,350 psi

Commonly used in induction furnace components and hot glass handling, this high-alumina ceramic combines excellent machinability with high temperature resistance and strength. The 99% alumina content makes it ideal for use in high-vacuum applications. Material comes fired and is unaffected by water.

Wear-Resistant Zirconia Ceramic

- Color: Opaque ivory
- Max. Temperature: 1000° F
- Machine: Use diamond grinding wheel
- Electrical Insulator: Poor
- Porosity: Nonporous
- Compressive Strength: 254,000 psi

As fracture-resistant and durable as many metals, this ceramic has been fired to obtain a high hardness and can be used in high-wear applications. Length tolerance is ±0.015″.

Dia.	Dia. Tolerance	12″ Length	
1/16″	±0.003″	8750K31	$47.82
1/8″	±0.004″	8750K33	51.64

Fracture-Resistant Silicon Nitride Ceramic

- Color: Translucent black
- Max. Temperature: 1470° F
- Machine: Use diamond tooling
- Electrical Insulator: Poor
- Porosity: Nonporous
- Compressive Strength: 580,000 psi

Often used to create bearings, silicon nitride ceramic is harder than many common bearing steels but is lightweight and can be easily polished. Balls have a 0.000005″ sphericity.

Wood

- Color: *Balsa* is light yellow; *Birch* is white to light brown; *Oak* is white to red; *Maple* is white to brown

Balsa is the lightest and softest of all woods but is still very strong. The surface is sanded and has either a straight or wavy grain.

Birch is softer than maple and oak. The surface is smooth and has a straight grain.

Oak is a heavy wood with high wear resistance and is much harder than birch. The surface is less smooth than birch and typically has a straight grain.

Maple is a heavy wood with high wear resistance and is much harder than birch. The surface is smooth and has a straight grain.

Strips

Material is balsa. Thickness, width, and length tolerances are not rated.

Marine Grade Plywood

When exposed to weather, water, steam, or dry heat, this premium plywood won't bubble, buckle, or delaminate. It is sanded equally on both sides and is free of surface and core defects. Width and length tolerances are ±3/8″. Meets BS1088 marine standards.

Modeling Clay

Clay stays workable when stored in a plastic bag. Sizes are approximate.

General Purpose Clay—Sold in packages of four 1/4-lb. sticks of the same color; each stick is 3/4″ Thick.×1″ Wd.×5″ Lg.

To Order: Please specify color: blue, brown, gray, green, red, or yellow.

1334T2 ..... **Pkg.** $4.62

Shrink-Resistant Clay—Smooth and nonhardening, clay will not shrink or crack. Sold in a 2-lb. block; 2 1/2″ Thick.×2 3/4″ Wd.×5 1/4″ Lg. Color is green-gray.

6102T11 ..... **Each** $21.37

Soft Sculpting Clay—The formula is sulfur-free, which reduces its potential to corrode metals. Often used when working with silicone rubber, the clay is smooth and can be melted and poured at 185° F. Sold in a 2-lb. block; 2 3/4″ Thick.×2 3/4″ Wd.×5″ Lg. Color is green-gray.

6102T21 ..... **Each** $17.46

Hard Styling Clay—Carve or extrude this crack-resistant clay or heat it to approximately 120° F for easier sculpting. Sold in a 2-lb. block; 2 3/4″ Thick.×2 3/4″ Wd.×5″ Lg. Color is brown.

6102T31 ..... **Each** $16.38

Extra-Hard Styling Clay—30% to 40% lighter than similar clays, this clay is crack and shrink resistant. It's also sulfur-free, which reduces its potential to corrode metals. Excellent for milling, it can be heated to 135° F for easier sculpting. Sold in a 1 3/4-lb. rod; 2 1/2″ Dia.×10″ Lg. Color is dark brown.

6102T41 ..... **Each** $15.47

Hard Natural Wax

Hard but brittle, this carnauba wax is the hardest natural wax available. It is wear resistant and often used as a polish because of its lustrous appearance. This wax is also used as a mold-release agent for wax blends. Softening temperature is 177° F. Hardness is not rated. Color is yellow. Sold in 1-lb. packages of wax flakes.

7259T22 ..... **Pkg.** $25.05

Sheet Lining Wax

Flexible enough to conform to angles, bends, and detailed surfaces, lining wax is even bendable at room temperature. Use it as lining in stamping prototypes and to produce castings of die patterns. Hardness is not rated. Thickness tolerance is ±0.002″. Sheets are approximately 12″×24″.

Standard Sheets—Softening temperature is 180° F. Color is brown.

High Temperature Sheets—The 220° F softening temperature is suitable for use with casting and laminate resins. Color is tan. *Adhesive-back sheets* have adhesive on one side and adhere to most oil-free surfaces.

Bonding Wax

Protect small or fragile items from vibration. This wax has good surface adhesion that holds temporarily. Remove wax with hot water. ***1-lb. tray*** is 1″ Thick.×5″ Wd.×8″ Lg.

	Melting Temp., °F	Color		
6-oz. Jar	165° to 175°	White	1129K14	$4.25
1-lb. Tray	140° to 150°	Yellow	1129K11	14.71

Sealing and Lubricating Wax

Seal your containers against water seepage or lubricate your tools. Hardness is not rated. Sizes are approximate.

Beeswax

Melting temperature is 160° F. Color varies from cream to yellow.

1-lb. block is 1 1/4″ Thick.×3 1/2″ Wd.×6 3/4″ Lg.

Candle is 1 1/4″ Dia.×6″ Lg.

Plugs are sold in packages of 16. Each plug weighs 1 oz. and is 1 3/8″ Dia.×1 1/4″ Lg.

Beads come in a 1-lb. package containing 14,700 beads.

		Each			Pkg.

Machinable Wax

Although this wax is hard and tough, it can be turned, milled, drilled, tapped, carved, and sawed easily without tool wear.

Nonabrasive Wax

Check CNC setups with this nonabrasive wax. Softening temperature is 214° F. Hardness is Shore 50D-52D. All dimensions have a ±1/8″ tolerance. **To Order:** Please specify color: blue, green, or purple.

Resin Fillers

Add these hollow spheres to epoxy, urethane, or polyester resins to reduce weight and shrinkage. Sold in 2-qt. containers.

Glass microspheres are a good choice when water resistance or sanding is required. Sphere diameter is 0.00236″. Color is clear.
1414T36 ..... $20.55

Ceramic spheres act as a thickening agent. Sphere diameter is 0.0055″. Color is gray.
1414T48 ..... $21.76

Casting Compounds

Capture intricate details when creating prototypes, molds, and linings with these easy-to-mix two-part compounds. For release agents, see page 2167. For hardness information, see page 3526.

Compounds cure at room temperature, except FDA-compliant urethane cures at 120°F. They shrink 1.5% or less during cure, except see-through urethane, FDA-compliant urethane, and foam urethane shrink 5%.

High Temperature Ceramic Casting Compounds

These two-part compounds harden in 20 minutes and cure in 16-24 hours at room temperature. Shrinkage rate is 1.5%.

Corrosion-resistant silicon carbide has a high heat transfer rate, making it ideal for use in metal casting molds. It has the added benefit of excellent erosion and oxidation resistance.

Shock-resistant silica withstands rapid changes in temperature without cracking and has a low rate of thermal expansion.

Ultra high temperature zirconium oxide is often used in metal handling applications. In addition to its high temperature resistance, it's also chemical resistant.

Low Melting Temperature Casting Alloys

Bar

Bismuth Alloys—When melted, bismuth alloys expand as they solidify, pushing into the crevices of your mold to produce a fine-detailed replica. They are also commonly used to repair dies and patterns and create fusible links.

Indium Alloys—The indium content lowers the melting temperature, so these alloys are especially easy to mold. They produce unblemished molds from glass, quartz, mica, and ceramic patterns.

Casting Alloys

Bar

Lead-Free Pewter Alloy—An alternative to lead, the low copper content of this alloy pours more easily at the casting temperature than standard pewter. Sold in a bag that contains two ingots, totaling approximately 1½ lbs. Each ingot is approximately 1¾″ Dia.×2″ Lg.

Zinc Alloy—Nonshrinking and corrosion resistant, zinc alloy can be used in casting applications that require easy machinability. Sold as a bar; approximately 6¼″ Thick.×2¾″ Wd.×11¼″ Lg.

Silicon-Bronze Alloy—This extremely high-temperature casting alloy provides an excellent surface finish. Sold in a bag that contains 1 lb. of ingots. Ingot size and number per bag varies.

	Melting Temp., °F	Composition (%) Copper	Zinc	Tin	Antimony	Aluminum	Silicon	Other	Approx. Wt., lbs.

Babbitt

Bar

Lead-Base Babbitt—Easy to cast, this soft metal offers superior antifriction properties for lighter-load applications.

Lead-Base Coppered Babbitt—For use in low-speed, heavy-load applications, coppered Babbitt withstands shock and vibration and requires less lubrication than other Babbitts.

Tin-Base Babbitt—The top choice for high-speed and high-wear applications, this Babbitt outperforms lead-base Babbitt and withstands heavy, sustained loads.

	Pouring Temp., °F	Composition (%) Lead	Tin	Antimony	Copper	Other	Approx. Size Thick.	Wd.	Lg.	Approx. Wt., lbs.

Zinc

A direct replacement for lead, zinc provides nonsparking and nonabrasive properties with only 0.003% lead content. Over time, a corrosion- and weather-resistant film develops on its surface. Material is often used in stamping, sound deadening, and EMI/RFI shielding applications. Melting temperature is 785°F. Thickness tolerance is ±0.003″.

Lead

Composed of at least 98% lead. Machine using carbide tooling. Melting temperature is 620° F, except shot and balls have a melting temperature range of 570° to 620° F. Color is gray to blue gray.

Sheets

Sheets are easy to form and can be used to line tanks and containers to prevent corrosion. They shield against small amounts of radiation and absorb sound and vibration. Sheets are cold rolled and have ±1/8″ width and length tolerances. Meet QQL-201F.

Wool

This easy-to-use wool packs into joints to create a watertight seal in pipe and plumbing connections. Cut with scissors.

5-lb. Bag 9021K11 $32.27

Vinyl-Coated Lead

Bend and twist into the shape you need. Often used as weights, these sheets contain 98% lead and have a red vinyl coating. Length, width, and thickness tolerances are ±0.020″. Maximum temperature is 250° F.

Thick.	2″×12″	
0.085″	2310K3	$46.32

Lead Hammer Metal

Chipping isn't a concern for this hard, ductile lead alloy. Used to fabricate nonmarring hammers, the material is composed of 94.25% lead and 5.75% antimony. Approximate size is 1 1/8″ Thick. × 1 5/8″ Wd. × 6 5/8″ Lg. and 5 lbs. Pouring temperature is 650° to 700° F (melting temperature is slightly lower).

9045K11 ..... $28.77

Tin

It's easy to cast and form this soft, malleable material. Composed of 99.85% to 100% tin, it is nontoxic and readily alloyed with lead, antimony, silver, copper, and other metals to form solder and Babbitt materials. Machine with standard steel tools. Color is silver.

Sheets

Commonly used to create gaskets and filters. Width and length tolerances are ±0.093″. Melting temperature is 425° F.

Triangular Bar

Approx. size is 1/2″ Ht. × 1″ Wd. (at base) × 11 1/2″ Lg. and 1 lb. Length, width, and thickness tolerances are not rated. Melting temperature is 450° F.

8886K11 ..... $54.55

About Aluminum Alloys

Aluminum is lightweight and offers moderate strength, as well as good corrosion resistance, formability, and machinability, especially when compared to steel. Aluminum typically melts at a lower temperature than steel; its capacity for conducting heat and electricity is about two-thirds that of copper.

About Temper

The temper shown indicates the processing done to achieve stabilized strength and hardness properties. A "T" temper means the material has been heat treated. An "H" temper indicates that the material is not heat treatable and may be hardened only by shaping without heat (often called strain hardening or cold working). "F" and "O" tempers are not hardened. Materials that share the same first letter and number are treated similarly.

Tempers shouldn't be used to compare alloys because the tempers only indicate the processes used to achieve properties. Comparisons among alloys can be made using the hardness and yield strength figures themselves.

Alloy	Page(s)	Alloy	Page(s)	Alloy	Page(s)
1100	3648	5052	3647	6063	3640-3641
2007	3650	5083	3648	7050	3646
2011	3650	5086	3647	7068	3646
2017	3651	5205	3648	7075	3645-3646
2024	3642-3645	6013	3639	MIC 6	3639
3003	3649-3650	6020	3651	Porous	3651
4032	3651	6060	3639	QC-10	3651
5005	3648	6061	3633-3639		

Hardness

The hardness of a material is its resistance to another material penetrating its surface. Harder metals offer more wear resistance, but they are more brittle. *Note:* Alloys 5005, 5083, 5205, 6060, 7050, and porous aluminum are not rated.

Yield Strength

Yield strength is the point at which material stretches and will not return to its original shape. At this point, the metal has changed shape permanently but does not break. *Note:* Alloys 2007 and 6060 and porous aluminum are not rated.

Weldability

Good— Weldable by all commercial procedures and methods.
Fair— May require special techniques and testing to develop procedures for welding.
Note: Alloy 2007 is not rated.

Welding Type	Good	Fair	Not Recommended
TIG/MIG	1100, 3003, 5052, 6013, 6061, 6063, MIC 6	5086, 6060	2011, 2017, 2024, 4032, 5005, 5083, 5205, 6020, 7050, 7068, 7075, Porous, QC-10
Arc	1100, 3003, 5052, 5083, 5086, 6013, 6061, 6063	2017, 2024, 4032, 6020, 6060	2011, 5005, 5205, 7050, 7068, 7075, MIC 6, Porous, QC-10
Spot	1100, 3003, 5052, 5083, 5086, 6013, 6061, 6063, 7050	2017, 2024, 6060, 7068, 7075	2011, 4032, 5005, 5205, 6020, MIC 6, Porous, QC-10

Corrosion Resistance

Indicates an alloy's suitability for outdoor use and high-salt spray applications. *Note:* Alloys 2007 and 6060 are not rated.

Excellent	Good	Fair	Poor
1100, 3003, 5052, 5083, 5086, QC-10	6013, 6020, 6061, 6063, Porous	4032, 5005, 5205, 7050, 7068, 7075	2011, 2017, 2024, MIC 6

Forming and Working

Also known as workability or bendability. It's the extent to which a material won't crack when bent without applying heat.

Excellent	Good	Fair	Poor
1100, 5052	3003, 5005, 5086, 5205	2011, 2024, 5083, 6060, 6061, 6063	2007, 2017, 4032, 6013, 6020, 7050, 7068, 7075, MIC 6, Porous, QC-10

Machinability

Machinable alloys can be cut, drilled, shaved, turned, reamed, tapped, threaded, or otherwise machined.

Excellent— These alloys are ideal for machining. When cut, they will not require extensive post-machining cleaning and will produce very small broken chips.

Good— These alloys will have a good to excellent finish after machining and will produce curled or easily broken chips.

Fair— Alloys have a satisfactory post-machining finish and will produce continuous chips.

Poor— Difficult to get clean part after machining.

Excellent	Good	Fair	Poor
2007, 2011, 6020, Porous, QC-10	2017, 2024, 4032, 6013, 7050, 7075, MIC 6	6060, 6061, 6063, 7068	1100, 3003, 5005, 5052, 5083, 5086, 5205

Warning! ***Hardness and yield strength are not guaranteed and are intended only as a basis for comparison.***

For information about aluminum alloys, see page 3632.

For information on the chemical composition of aluminum alloys, as well as physical and mechanical properties, go to mcmaster.com and search for **8975KAC**.

Multipurpose Aluminum (Alloy 6061)

A combination of good strength, corrosion resistance, and machinability makes this the most widely used aluminum. It has less strength than Alloys 2024 and 7075, but better corrosion resistance and weldability. It's heat treatable and resists cracking due to stress. Commonly used for vehicle parts and pipe fittings. Nonmagnetic. Temperature range is –320° to +300° F.

Rectangular Bars—Unpolished (Mill) Finish

- Hardness: 60-95 Brinell
- Yield Strength: 35,000 psi
- Temper: T6511, unless noted

Meet ASTM B221. Flatness tolerance is not rated. Length tolerance is +1/8″ for lengths up to 6″ and ±1″ for 1-, 3-, and 6-ft. lengths.

To Order: Please specify 1-, 3-, or 6-ft. length where prices are shown.

(Material continued on following page)

Warning! ***Hardness and yield strength are not guaranteed and are intended only as a basis for comparison.***

For information about aluminum alloys, see page 3632.

For information on the chemical composition of aluminum alloys, as well as physical and mechanical properties, go to mcmaster.com and search for **8975KAC**.

Multipurpose Aluminum (Alloy 6061) *(Material continued from previous page)*

A combination of good strength, corrosion resistance, and machinability makes this the most widely used aluminum. It has less strength than Alloys 2024 and 7075, but better corrosion resistance and weldability. It's heat treatable and resists cracking due to stress. Commonly used for vehicle parts and pipe fittings. Nonmagnetic. Temperature range is –320° to +300° F.

Rectangular Bars with Material Certification—Unpolished (Mill) Finish

• Hardness: 95 Brinell • Yield Strength: 40,000 psi • Temper: T6511

Meet ASTM B221. Each comes with a traceable lot number and physical test report. Flatness tolerance is 0.004″ per foot. Length tolerance is ±1″. Sold in 6-ft. lengths.

Also Available: Additional sizes in 6-ft. lengths. Offered in the same thicknesses and widths as 8975K series rectangular bars on page 3633. Please ask for 1614T995 and specify thickness and width.

Rectangular Bars—Hard Anodized Coating (Dark Brown)

• Hardness: Rockwell C70 • Yield Strength: 40,000 psi (before coating) • Temper: T6511 (before coating)

About half of the coating penetrates the material, while the other half covers the surface. The coating resists wear and corrosion, is 0.001″ to 0.002″ thick, and meets MIL-A-8625. Width tolerance is ±0.014″. Flatness tolerance is not rated. Length tolerance is ±1/16″. **To Order:** Please specify 1- or 3-ft. length.

■ Temper is T6511. Meet ASTM B221.

Sheets—Polished Finish

Brushed (#4 Satin) Finish

Mirror-Like (#8) Finish

- Hardness: 95 Brinell
- Yield Strength: 40,000 psi
- Temper: T6

Meet ASTM B209. Width and length tolerances are +1/32″. Flatness tolerance is 0.125″ across the width. All have a protective peel-off masking. ***Brushed (#4 satin) finish sheets*** are polished on one side, with grain lines running in one direction. ***Mirror-like (#8) finish sheets*** are also polished on one side, but are free of grain lines.

Tight-Tolerance Blanks with Material Certification—Precision Ground Finish

- Hardness: 95 Brinell
- Yield Strength: 40,000 psi
- Temper: T651

Meet ASTM B209. Consistently flat, square, and parallel on all six sides, you can simply place these blanks in your CNC machine and start machining. Each comes with a traceable lot number and physical test report. Tolerance on all dimensions is ±0.002″.

Multipurpose Aluminum (Alloy 6061) *(Material continued from previous page)*

A combination of good strength, corrosion resistance, and machinability makes this the most widely used aluminum. It has less strength than Alloys 2024 and 7075, but better corrosion resistance and weldability. It's heat treatable and resists cracking due to stress. Commonly used for vehicle parts and pipe fittings. Nonmagnetic. Temperature range is –320° to +300° F.

Sheets—Hard Anodized Coating

- Hardness: Rockwell C70
- Yield Strength: 40,000 psi (before coating)
- Temper: T6 for sheets up to 0.190″ thick; T651 for 0.250″ thick sheets and thicker (before coating)

About half of the coating penetrates the material, while the other half covers the surface. The coating is 0.001″ to 0.002″ thick, resists wear and corrosion, and meets MIL-A-8625. Width and length tolerances are ±¼″. Flatness tolerance is not rated.

★ Temper is T6.

Rods—Hard Anodized Coating

- Hardness: Rockwell C70
- Yield Strength: 40,000 psi (before coating)
- Temper: T6 or T6511 (before coating)

About half of the coating penetrates the material, while the other half covers the surface. The coating is 0.001″ to 0.002″ thick, resists wear and corrosion, and meets MIL-A-8625. Straightness tolerance is not rated. Length tolerance is ±1/16″.

To Order: Please specify 1- or 3-ft. length.

Dia.	Dia. Tolerance		1 ft.	3 ft.
1/8″	±0.007″	6750K11	$1.85	$4.63
3/16″	±0.007″	6750K12	2.78	6.17
1/4″	±0.008″	6750K13	3.60	8.00
5/16″	±0.008″	6750K14	$5.35	$11.88
3/8″	±0.008″	6750K15	5.94	13.19
1/2″	±0.009″	6750K16	6.29	13.97
5/8″	±0.009″	6750K17	$9.29	$20.65
3/4″	±0.010″	6750K18	13.93	30.96
1″	±0.012″	6750K19	23.22	51.61

Also Available: Chrome-coated rods with a slippery surface. Hardness is Rockwell C60-C65, yield strength is 40,000 psi (before coating), and temper is T6 (before coating). The coating is 0.0003″ to 0.0007″ thick. Meet AMS QQ-C-320 and AMS 2406. Offered in the same diameters and lengths listed above. Please ask for 7830K21 and specify diameter and length.

Tight-Tolerance Rods—Precision Ground Finish

- Hardness: Not rated
- Yield Strength: 35,000 psi
- Temper: T6511, unless noted

The 1/8″ to 1/4″ diameter rods meet ASTM B211; 5/16″ diameter and larger rods meet ASTM B221. Diameter tolerance is –0.0005″. Straightness tolerance is 0.001″ per foot. Length tolerance is ±1″.

To Order: Please specify 1-, 3-, or 6-ft. length where prices are shown.

For information on the chemical composition of aluminum alloys, as well as physical and mechanical properties, go to mcmaster.com and search for **8975KAC**.

Multipurpose Aluminum (Alloy 6061) *(Material continued from previous page)*

A combination of good strength, corrosion resistance, and machinability makes this the most widely used aluminum. It has less strength than Alloys 2024 and 7075, but better corrosion resistance and weldability. It's heat treatable and resists cracking due to stress. Commonly used for vehicle parts and pipe fittings. Nonmagnetic. Temperature range is –320° to +300° F.

Hexagonal Bars—Unpolished (Mill) Finish

- Hardness: 95 Brinell
- Yield Strength: 35,000 psi
- Temper: T651, unless noted

Meet ASTM B211, unless noted. Hex size is measured across the flats. Straightness tolerance is not rated. Length tolerance is ±1″.

To Order: Please specify 1-, 3-, or 6-ft. length where prices are shown.

Hex Size	Tolerance

90° Angles with Material Certification—Unpolished (Mill) Finish

- Hardness: 95 Brinell
- Yield Strength: 40,000 psi
- Temper: T6

Meet ASTM B308. Each comes with a traceable lot number and physical test report. Inside corner and leg edges are rounded; outside corner is squared. Straightness tolerance is 0.0125″ per foot. Length tolerance is +5″. Sold in 8-ft. lengths.

Leg Lg.	Tolerance

T-Bars—Unpolished (Mill) Finish

- Hardness: 80 Brinell
- Yield Strength: 35,000 psi
- Temper: T6

Meet ASTM B221. Edges are squared, unless noted. Flatness tolerance is 0.006″ per inch of width. Straightness tolerance is 0.050″ per foot for 0.050″ and 0.063″ thick bars; 0.0125″ per foot for 0.125″ and 0.188″ thick bars. Length tolerance is ±1/8″. Sold in 8-ft. lengths.

♦ Edges are rounded.

I-Beams—Unpolished (Mill) Finish

- Hardness: 95 Brinell
- Yield Strength: 40,000 psi
- Temper: T6

Meet ASTM B221 and B308. Also known as American Standard I-Beams. Edges are rounded. Width tolerance is ±0.024″. Thickness tolerance is ±0.008″. Straightness tolerance is 0.0125″ per foot. Length tolerance is ±1/4″. **To Order:** Please specify 3- or 6-ft. length.

Ht.	Tolerance
3″	±0.024″
4″	±0.034″

Ht.	Tolerance
6″	±0.044″

Multipurpose Aluminum (Alloy 6061) *(Material continued from previous page)*

U-Channels—Unpolished (Mill) Finish

- Hardness: 95 Brinell
- Yield Strength: 40,000 psi
- Temper: T6

Meet ASTM B308. Inside corners and leg edges are rounded; outside corners are squared. Base and leg thickness tolerances are not rated. Straightness tolerance is 0.0125″ per foot. Length tolerance is ±1/2″.

Base Wd. (A)	Tolerance

Metric Multipurpose Aluminum (Alloy 6060)

The European equivalent of Alloy 6061, this alloy combines good machinability, high strength, and corrosion resistance. It's heat treatable and its surface finish is good for anodizing. Use for light structural and architectural applications. Nonmagnetic. Temperature range is not rated.

Metric Rods—Unpolished (Mill) Finish

- Hardness: Not rated
- Yield Strength: Not rated
- Temper: Not rated

Diameter, straightness, and length tolerances are not rated. Sold in 1-meter lengths.

Precision-Cast Multipurpose Aluminum (MIC 6 Alloy)

For outstanding machinability and stability, turn to this stress-relieved cast alloy. Not heat treatable. Nonmagnetic. Temperature range is not rated.

Sheets—Precision Ground Finish

- Hardness: 65 Brinell
- Yield Strength: 18,000 psi
- Temper: As cast

Width and length tolerances are ±1/16″. Thickness tolerance is ±0.005″. Flatness tolerance is 0.015″ for all sheets 1/4″ to 5/8″ thick; 0.005″ for all sheets 3/4″ thick and thicker.

High-Strength Multipurpose Aluminum (Alloy 6013)

Get the corrosion resistance and thermal conductivity of Alloy 6061 with improved strength, hardness, and machinability. Heat treatable and nonmagnetic. Temperature range is not rated.

Sheets—Unpolished (Mill) Finish

- Hardness: 125-130 Brinell
- Yield Strength: 50,000 to 52,000 psi
- Temper: T651

Sheets 8″ wide and larger meet ASTM B209. Flatness tolerance is 0.004″ per inch of width. Length tolerance is ±1″.

Also Available: Alloy 6013 rods with an unpolished (mill) finish. Hardness is 125 Brinell; yield strength is 55,000 to 56,000 psi; and temper is T8. Please ask for 9049K49 and specify 1″ to 2 1/2″ diameter and 1-, 3-, or 6-ft. length.

Warning! Hardness and yield strength are not guaranteed and are intended only as a basis for comparison.

For information about aluminum alloys, see page 3632.

For information on the chemical composition of aluminum alloys, as well as physical and mechanical properties, go to mcmaster.com and search for **8975KAC**.

Ultra-Corrosion-Resistant Architectural Aluminum (Alloy 6063)

With superb corrosion resistance, this heat-treatable alloy is perfect for outdoor applications such as architectural trim, railings, and piping. It also has great weldability. Nonmagnetic. Temperature range is –320° to +212°F.

Rectangular Bars—Unpolished (Mill) Finish

- Hardness: 55-60 Brinell
- Yield Strength: 16,000 to 21,000 psi
- Temper: T5, unless noted

Meet ASTM B221. Flatness tolerance is 0.006″ per inch of width. Length tolerance is ±1″. Sold in 8-ft. lengths.

Round Tubes—Unpolished (Mill) Finish

- Hardness: 55-60 Brinell
- Yield Strength: 15,000 psi
- Temper: T5

Meet ASTM B221. Straightness tolerance is 0.010″ per foot. Length tolerance is ±1/4″. OD and ID tolerances are ±0.025″. Sold in 8-ft. lengths.

Ultra-Corrosion-Resistant Architectural Aluminum (Alloy 6063)

(Material continued from previous page)

Rods—Unpolished (Mill) Finish

- Hardness: 60 Brinell
- Yield Strength: 21,000 psi
- Temper: T52

Meet ASTM B221. Diameter tolerance is ±0.006″. Straightness tolerance is 0.0125″ per foot. Length tolerance is ±1″. Sold in 8-ft. lengths.

Dia.		
3/8″	1640T31	$7.34
1/2″	1640T33	12.51
3/4″	1640T35	25.66
1″	1640T37	43.18

Double-Wall Round Tube—Unpolished (Mill) Finish

- Hardness: 73-84 Brinell
- Yield Strength: 31,000 psi
- Temper: T6

OD tolerance is ±0.034″. Outer wall is 0.11″ thick and inner wall is 0.14″ thick. Wall thickness tolerance is ±0.020″. Straightness tolerance is 0.015″ per foot. Length tolerance is ±1/2″. **To Order:** Please specify 1-, 3-, or 6-ft. length.

OD	ID		1 ft.	3 ft.	6 ft.
3.062″	1.922″	8891K11	$39.00	$93.60	$156.00

90° Angles—Unpolished (Mill) Finish

- Hardness: 55-60 Brinell
- Yield Strength: 15,000 to 21,000 psi
- Temper: T5, unless noted

Meet ASTM B221. Edges are squared. Straightness tolerance is 0.0125″ per foot. Length tolerance is ±1″. Sold in 8-ft. lengths.

High-Strength Aluminum (Alloy 2024)

You trust it 30,000 feet in the air: Alloy 2024 combines superior strength and good machinability to make it the most widely used aircraft alloy. The addition of copper improves strength, but decreases corrosion resistance. Use for aircraft parts, screw machine parts, and wheels. Heat treatable. Nonmagnetic. Temperature range is –320° to +300° F.

Rectangular Bars—Unpolished (Mill) Finish

- Hardness: 120 Brinell
- Yield Strength: 42,000 to 45,000 psi
- Temper: T351, except 1/8″ to 3/8″ thicknesses are T4

Meet ASTM B211. Straightness tolerance is not rated. Length tolerance is ±1″.

To Order: Please specify 1-, 3-, or 6-ft. length where prices are shown.

Rectangular Bars with Material Certification—Unpolished (Mill) Finish

- Hardness: 120 Brinell
- Yield Strength: 47,000 psi
- Temper: T4, except 1/2″ thickness is T351

Meet ASTM B211. Each comes with a traceable lot number and physical test report. Width tolerance is ±0.003″, except 2″ widths are ±0.005″. Flatness tolerance is 0.004″ per inch of width. Length tolerance is ±1″. Sold in 6-ft. lengths.

Military Specification Sheets—Unpolished (Mill) Finish

- Hardness: 120 Brinell
- Yield Strength: 47,000 to 48,000 psi
- Temper: T351

Meet ASTM B209. Sheets also meet MIL-S-2154 and are ultrasonically inspected (USI) for defects below the surface of the material. Width and length tolerances are ±1/16″. Flatness tolerance is not rated.

Tight-Tolerance Blanks with Material Certification—Precision Ground Finish

- Hardness: 120 Brinell
- Yield Strength: 47,000 psi
- Temper: T351

Meet ASTM B209. You won't need to prepare this material for machining. Precision ground blanks are consistently flat, square, and parallel on all sides. Each comes with a traceable lot number and physical test report. Tolerance for all dimensions is ±0.002″.

High-Strength Aluminum (Alloy 2024) *(Material continued from previous page)*

You trust it 30,000 feet in the air: Alloy 2024 combines superior strength and good machinability to make it the most widely used aircraft alloy. The addition of copper improves strength but decreases corrosion resistance. Use for aircraft parts, screw machine parts, and wheels. Heat treatable. Nonmagnetic. Temperature range is –320° to +300° F.

Rods—Unpolished (Mill) Finish

- Hardness: 120 Brinell
- Yield Strength: 45,000 psi
- Temper: T351, except 1/4″ and 3/8″ diameters are T4

Meet ASTM B211. Straightness tolerance is not rated. Length tolerance is ±1″, except 6″ and smaller lengths have a length tolerance of +1/8″.

To Order: Please specify 1-, 3-, or 6-ft. length where prices are shown.

1/16″	1 1/8″	1 1/8″	**9931T16**	87.36

Corrosion-Resistant High-Strength Aluminum (Alloy 7075)

Exceptionally strong but still lightweight, this aircraft alloy has better corrosion resistance than Alloy 2024 due to the addition of zinc. Originally developed for aircraft frames, it is also used for keys, gears, and other high-stress parts. Heat treatable. Nonmagnetic. Temperature range is –320° to +212° F.

Rectangular Bars—Unpolished (Mill) Finish

- Hardness: 130 Brinell, unless noted
- Yield Strength: 56,000 psi, unless noted
- Temper: T7351, unless noted

Meet ASTM B211. Flatness tolerance is 0.004″ per inch of width. Length tolerance is ±1″. **To Order:** Please specify 1-, 3-, or 6-ft. length.

Corrosion-Resistant High-Strength Aluminum (Alloy 7075)

(Material continued from previous page)

Exceptionally strong but still lightweight, this aircraft alloy has better corrosion resistance than Alloy 2024 due to the addition of zinc. Originally developed for aircraft frames, it is also used for keys, gears, and other high-stress parts. Heat treatable. Nonmagnetic. Temp. range is –320° to +212° F.

Tight-Tolerance Blanks with Material Certification—Precision Ground Finish

- Hardness: 150 Brinell
- Yield Strength: 73,000 psi
- Temper: T651

Meet ASTM B209. There's no need to prepare these precision ground blanks for machining in a CNC machine. They're flat, square, and parallel on all six sides. Each comes with a traceable lot number and physical test report. Tolerance for all dimensions is ±0.002″.

Ultra-Strength Aluminum (Alloy 7068)

Due in part to a high zinc content, this heat-treatable alloy is significantly stronger and harder than Alloy 7075 with comparable corrosion resistance. Originally developed for military hardware applications, it is now being used for vehicle parts as well as other applications requiring extremely high strength. Nonmagnetic. Maximum temperature is 300° F; minimum temperature is not rated.

Rods—Unpolished (Mill) Finish

- Hardness: 190 Brinell
- Yield Strength: 95,000 psi
- Temper: T6511

Straightness tolerance is not rated. Length tolerance is ±1″. **To Order:** Please specify 1-, 3-, or 6-ft. length.

Ultra-Corrosion-Resistant High-Strength Aluminum (Alloy 7050)

This high-strength alloy offers better corrosion resistance than Alloy 7075 when under stress. It's heat treatable and commonly used in aircraft applications. Nonmagnetic. Temperature range is not rated.

Military Specification Sheets—Unpolished (Mill) Finish

- Hardness: Not rated
- Yield Strength: 68,000 psi
- Temper: T7451

Sheets meet MIL-S-2154 and are ultrasonically inspected (USI) for defects below the surface of the material. Also meet AMS 4050. Width and length tolerances are ±1/16″. Flatness tolerance is not rated.

Warning! Hardness and yield strength are not guaranteed and are intended only as a basis for comparison.

For information about aluminum alloys, see page 3632.

For information on the chemical composition of aluminum alloys, as well as physical and mechanical properties, go to mcmaster.com and search for **8975KAC**.

Super-Corrosion-Resistant Aluminum (Alloy 5086)

Choose this marine-grade aluminum alloy for its excellent corrosion resistance and good formability. Ideal for saltwater applications, it's commonly used in ships, oil rigs, tanks, and pressure vessels. Not heat treatable. Nonmagnetic. Temperature range is not rated.

Sheets—Unpolished (Mill) Finish

- Hardness: Not rated
- Yield Strength: 28,000 psi
- Temper: H32 (1/4 hard)

Meet ASTM B209. Width and length tolerances are ±1/16″, except 0.249″ thick sheets have ±1/4″ width and length tolerances. Flatness tolerance is not rated.

Thick.	Thick. Tolerance	12″×12″		12″×24″		24″×24″		24″×48″		48″×48″

Super-Corrosion-Resistant Easy-to-Weld Aluminum (Alloy 5052)

With excellent corrosion resistance and good formability, this alloy is similar to Alloy 5086 but also has good weldability for a wider range of applications. Not heat treatable. Nonmagnetic. Temperature range is –320° to +300° F.

Rectangular Bars with Material Certification—Unpolished (Mill) Finish

- Hardness: 60 Brinell
- Yield Strength: 28,000 psi
- Temper: H32 (1/4 hard)

Meet ASTM B209. Each comes with a traceable lot number and physical test report. Width and length tolerances are +1/16″. Bars are saw cut; flatness tolerance is not rated. **To Order:** Please specify 1-, 3-, or 6-ft. length.

Sheets

Unpolished (Mill) Finish

Brushed (#4 Satin) Finish

Mirror-Like (#8) Finish

- Hardness: 60 Brinell
- Yield Strength: 28,000 psi
- Temper: H32 (1/4 hard)

Meet ASTM B209. Flatness tolerance is not rated.

Unpolished (Mill) Finish—Width and length tolerances are ±1/8″.

Brushed (#4 Satin) Finish—Polished on one side, with grain lines running in one direction. Polished side has a peel-off protective masking. Width and length tolerances are +1/32″.

Mirror-Like (#8) Finish—Polished on one side and free of grain lines. Polished side has a peel-off protective masking. Width and length tolerances are +1/32″.

Finish Selector Pack—Includes one individually marked piece each of unpolished (mill), brushed (#4 satin), and mirror-like (#8) finishes. Each piece is approximately 1 1/2″×3″×1/32″ thick.

1115T11 ..... **Pkg.** $18.94

Warning! ***Hardness and yield strength are not guaranteed and are intended only as a basis for comparison.***

For information about aluminum alloys, see page 3632.

For information on the chemical composition of aluminum alloys, as well as physical and mechanical properties, go to mcmaster.com and search for **8975KAC**.

High-Strength Super-Corrosion-Resistant Aluminum (Alloy 5083)

The strongest of the marine-grade alloys, this aluminum alloy offers high strength in addition to excellent corrosion resistance and good weldability. Typically used in saltwater applications. Not heat treatable. Nonmagnetic. Temperature range is not rated.

Sheets—Unpolished (Mill) Finish

- Hardness: Not rated
- Yield Strength: 31,000 psi
- Temper: H116 (⅛ hard)

Meet ASTM B209 or B928. Width and length tolerances are ±¼″. Flatness tolerance is not rated.

Thick.	Thick. Tolerance	12″×12″		12″×24″		24″×24″

Basic Aluminum (Alloy 1100)

Considered commercially pure, Alloy 1100 is 99% aluminum and is an excellent conductor of heat and electricity. It offers excellent corrosion resistance and is easily welded and brazed. Ideal for chemical equipment, heat exchanger fins, and sheet metal work. Not heat treatable. Nonmagnetic. Temperature range is –200° to +300° F.

Alloy 1100 Sample—Size is 6″×6″×⅛″ **88685K1** $5.92

Rectangular Bars—Unpolished (Mill) Finish

- Hardness: 32 Brinell
- Yield Strength: 17,000 psi
- Temper: H14 (½ hard)

Meet ASTM B209. Width and length tolerances are ±¼″. Straightness tolerance is not rated.
To Order: Please specify 1-, 3-, or 6-ft. length.

Width		1 ft.	3 ft.	6 ft.
⅜″ Thick *(±0.015″)*				
1″	2474T51	$35.79	$94.35	$162.67

Soft (Annealed) Sheets—Unpolished (Mill) Finish

- Hardness: 23 Brinell
- Yield Strength: 5,000 psi
- Temper: O (annealed)

Meet ASTM B209. Also known as "dead soft," annealed sheets are pliable. Width and length tolerances are ±1/16″. Not rated for flatness.

Basic Aluminum (Alloy 5005/5205) with Colored Finishes

Get the performance of basic aluminum in your choice of colors. It's made from either Alloy 5005 or 5205 and anodized for good corrosion resistance and an attractive appearance. Not heat treatable. Nonmagnetic. Temperature range is not rated.

Sheets—Anodized Coating

- Hardness: Not rated
- Yield Strength: 15,000 psi
- Temper: H34 (½ hard)

Black sheets have a matte finish and are colored on one side; ***gold*** and ***silver*** sheets have a brushed finish and are colored on both sides. Width and length tolerances are ±1/32″. Flatness tolerance is not rated.

Color	12″×12″		12″×24″		24″×24″	
0.032″ Thick *(±0.002″)*						
Gold	6062K31	$9.96	6062K32	$17.79	6062K33	$32.53

Warning! ***Hardness and yield strength are not guaranteed and are intended only as a basis for comparison.***

For information about aluminum alloys, see page 3632.

For information on the chemical composition of aluminum alloys, as well as physical and mechanical properties, go to mcmaster.com and search for **8975KAC**.

Improved-Strength Basic Aluminum (Alloy 3003)

Good weldability, formability, and corrosion resistance make Alloy 3003 similar to Alloy 1100 but with slightly higher strength due to the addition of manganese. Use in chemical and food processing equipment, tanks, heat exchangers, and sheet metal work. Not heat treatable. Nonmagnetic. Temperature range is –320° to +300° F, unless noted.

Rectangular Bars with Material Certification—Unpolished (Mill) Finish

- Hardness: 40 Brinell
- Yield Strength: 21,000 psi
- Temper: H14 (½ hard)

Meet ASTM B209. Each comes with a traceable lot number and physical test report. Width tolerance is ±1/16″, except 1/4″ thick bars are +1/16″. All bars are saw cut; flatness tolerance is not rated. Length tolerance is ±1/2″.

To Order: Please specify 1-, 3-, or 6-ft. length.

Textured Sheets—Unpolished (Mill) Finish

Weave

Diamond

Tread

- Hardness: 40 Brinell
- Yield Strength: 17,000 psi
- Temper: H14 (½ hard)

Meet ASTM B209. The textured surface on these sheets minimizes surface contact area to reduce friction and static cling, increase rigidity, and hide fingerprints and dents. Width and length tolerances are +1/16″. Flatness tolerance is not rated. **To Order:** Please specify pattern: weave, diamond, or tread.

Texture Selector Pack—Includes one piece each of weave, diamond, and tread textures. Each piece is 1½″×3″×1/16″ thick. ..... **9058K1** **Pkg.** $2.05

Painted Sheets—Glossy Finish

- Hardness: Not rated
- Yield Strength: 17,000 psi
- Temper: H14 or H24 (½ hard)

Meet ASTM B209. May be either Alloy 3003 or 3105. Width and length tolerances are ±0.025″. Flatness tolerance is 7/8″. **To Order:** One side is white; please specify color for other side: black, orange, red, white, or yellow.

Thick.	Thick. Tolerance	12″×12″		12″×24″		24″×24″		24″×36″	
0.040″	±0.0025″	4279T11	$17.76	4279T12	$27.59	4279T13	$47.62	4279T14	$64.43

Tubes—Unpolished (Mill) Finish

- Hardness: 40 Brinell
- Yield Strength: 21,000 psi
- Temper: H14 (½ hard)

Create telescoping tubes by fitting a tube inside one that is the next larger size. Straightness tolerance is not rated. Length tolerance is ±1/32″.

OD	ID	1-ft. Lengths Pkg. Qty.	Pkg.	6-ft. Lengths	Each

(Material continued on following page)

Warning! ***Hardness and yield strength are not guaranteed and are intended only as a basis for comparison.***

For information about aluminum alloys, see page 3632.

For information on the chemical composition of aluminum alloys, as well as physical and mechanical properties, go to mcmaster.com and search for **8975KAC**.

Improved-Strength Basic Aluminum (Alloy 3003) *(Material continued from previous page)*

Good weldability, formability, and corrosion resistance make Alloy 3003 similar to Alloy 1100 but with slightly higher strength due to the addition of manganese. Use in chemical and food processing equipment, tanks, heat exchangers, and sheet metal work. Not heat treatable. Nonmagnetic.

Honeycomb Cores—Unpolished (Mill) Finish

- Hardness: Not rated
- Yield Strength: Not rated
- Temper: Not rated

Made of 3000 series aluminum. Temperature range is –30° to +300° F. Width and length tolerances are ±1/4″. Thickness tolerance is ±0.008″. Flatness tolerance is not rated.

Honeycomb Panels

- Hardness: Not rated
- Yield Strength: Not rated
- Temper: Not rated

Made of 3000 series aluminum. Temperature range is 0° to 180° F. Panels consist of an aluminum honeycomb core bonded between two aluminum covers. Honeycomb core has an unpolished (mill) finish; covers have a painted (glossy) white finish and a peel-off protective masking. Width and length tolerances are ±1/2″. Thickness tolerance is ±0.015″. Flatness tolerance is not rated.

Easy-to-Machine Aluminum (Alloy 2011)

Featuring the best machinability of all aluminum alloys, Alloy 2011 is the most widely selected for screw machine products, tube fittings, hose parts, and other items that require extensive machining. The addition of copper improves strength but decreases corrosion resistance. Heat treatable. Nonmagnetic. Maximum temperature is 212° F; minimum temperature not rated.

Rods—Unpolished (Mill) Finish

- Hardness: 95 Brinell, except 4 1/2″ and 5″ diameters are not rated
- Yield Strength: 18,000 to 38,000 psi
- Temper: T3, except 4 1/2″ and 5″ diameters are T4

Meet ASTM B211. Straightness tolerance is not rated. Length tolerance is ±1″.

To Order: Please specify 1-, 3-, or 6-ft. length where prices are shown.

Diameter	Tolerance
1/4″-1/2″	±0.0015″

Metric Easy-to-Machine Aluminum (Alloy 2007)

This heat-treatable alloy has excellent machinability for use in screw machine products, tube fittings, hose parts, and any component that requires extensive machining. Its high copper content increases strength but reduces resistance to corrosion. Nonmagnetic. Temperature range is not rated.

Rods (Metric Sizes)—Unpolished (Mill) Finish

- Hardness: 100-140 Brinell
- Yield Strength: Not rated
- Temper: T3 or T4

Diameter, straightness, and length tolerances are not rated. Sold in 1-meter lengths.

Dia., mm			Dia., mm			Dia., mm			Dia., mm

Warning! ***Hardness and yield strength are not guaranteed and are intended only as a basis for comparison.***

For information about aluminum alloys, see page 3632.

For information on the chemical composition of aluminum alloys, as well as physical and mechanical properties, go to mcmaster.com and search for **8975KAC**.

Weldable Easy-to-Machine Aluminum (Alloy 2017)

With machinability approaching that of Alloy 2011, Alloy 2017 is great for use in items that require extensive machining such as fasteners and fittings. Unlike Alloy 2011, it can also be welded. The addition of copper increases strength but reduces corrosion resistance. Heat treatable. Nonmagnetic.

Rods—Unpolished (Mill) Finish

- Hardness: 105 Brinell
- Yield Strength: 32,000 psi
- Temper: T451

Meet ASTM B211. Temperature range is –320° to +300° F. Straightness tolerance is not rated. Length tolerance is ±1″.

To Order: Please specify 1-, 3-, or 6-ft. length where prices are shown.

Mold-Quality Aluminum (QC-10 Alloy)

Outstanding thermal conductivity, when compared to steel, along with high strength and surface hardness make this heat-treatable alloy suitable for use in production injection molds and blow molds. Nonmagnetic. Temperature range is not rated.

Sheets—Unpolished (Mill) Finish

- Hardness: 140-175 Brinell
- Yield Strength: 82,000 psi
- Temper: Not rated

Width and length tolerances are ±1/16″. Flatness tolerance is 3/16″.

Thick.	Thick. Tolerance	6″×6″		12″×12″	
1″	+0.098″	1643T31	$73.22	1643T32	$266.27

Porous Mold-Quality Aluminum

Perfect for creating molds used in vacuum forming and thermoforming, this aluminum alloy is porous to let air and moisture through, preventing bubbles and blemishes in your material when forming. It can also be used to filter air, gases, and even thin liquids. Not heat treatable. Nonmagnetic. Maximum temperature is 230° F; minimum temperature is not rated.

Metric Sheets—Unpolished (Mill) Finish

- Hardness: Not rated
- Yield Strength: Not rated
- Temper: Not rated

Sheets must be ground to expose the pores; average pore diameter is 0.0006″ with a total porosity of 15%. Width and length tolerances are ±2 mm. Sheets are saw cut; flatness tolerance is not rated.

50 mm	+2 mm	—	—	8189K63	1,333.33

Warning! *Hardness and yield strength are not guaranteed and are intended only as a basis for comparison.*

About Steel

Steel is composed mainly of iron, carbon, and other alloying elements that offer a wide range of characteristics including high strength, shock resistance, and machinability. Metals in which there is more than 10.5% chromium as an alloying element are considered to be stainless steel (pages 3685-3709).

Carbon steel, designated by 1XXX (example: 1018), is a simple alloy of iron with carbon, manganese, and silicon. Note that as a material's carbon content increases, its strength improves but its formability and weldability lessen.

Alloy steel, designated by 2XXX-9XXX (example: 4140) or 52XXX (example: E52100), contains additional elements such as chromium and molybdenum to enhance properties such as machinability, weldability, hardness, abrasion resistance, and corrosion resistance.

Tool steel, designated by <letter>,<number> (example: D2), is highly alloyed, resulting in increased hardness, wear resistance, and temperature resistance. Tool steel is ideal for the creation of tools used for cutting, shaping, and forming materials—applications in which metals can withstand shock without breaking or deforming. Tool steel is generally categorized by method of hardening, mechanical features, or major alloying element.

Hardness

The hardness of a material is its resistance to another material penetrating its surface. Harder metals have more wear resistance. Tool steels are rated after hardening; all other materials are rated in their annealed conditions.

Yield Strength

Yield strength is the point at which a metal bends and will not return to its original shape. At this point, the metal has changed shape permanently but does not break. All are rated in their annealed conditions. *Note*: Yield strength is not rated in the annealed condition for 1074/1075, 1095, 1144, 4340, M42, and M50.

Machinability

Machinability refers to a material's ability to be cut, drilled, reamed, tapped, threaded, etc. All are rated in their annealed conditions. Carbon and alloy steel ratings use AISI 1112/1212 as a basis, while tool steels use W1.

Note: Machinability is not rated for 1074/1075 and 1095.

	Excellent	Very Good	Good	Fair
Carbon and alloy steels	12L14, 1215	1144, 41L40	A36, 1018, 1045, 1065, 4130, 4140/4142, 8620	4150, 4340, E52100
Tool steels	W1	_____	O1, P20	A2, A6, D2, H13, M2/M7, M4, S7

Weldability

Refers to a material's ability to be welded. All are rated in their annealed conditions.

Note: Weldability is not rated for 1074/1075, 1095, 41L40, M4, P20, and S2.

Good	Fair	Difficult
A36, 1018, 4130, 4150, 4340, 8620, O1	1045, 4140/4142, A2, A6, H13, S7	1065, 1144, 12L14, 1215, E52100, D2, M2/M7, W1

Toughness

Toughness refers to a material's ability to absorb energy before fracturing. Tool steels are rated after hardening; all others are rated in their annealed conditions.

Note: Toughness is not rated for A36, 1018, 1045, 1065, 1074/1075, 1095, 1215, 4130, and 4150.

Excellent	Good	Fair	Poor
41L40, H13, S7, S2	4140/4142, 4340, 8620, E52100, O1, P20, W1	A2, A6	1144, 12L14, D2, M2/M7, M4

Wear Resistance

Wear resistance measures a material's ability to resist surface loss due to motion between that surface and a contacting substance. Tool steels are rated after hardening; all other materials are rated in their annealed conditions.

Note: Wear resistance is not rated for A36, 1018, 1045, 1065, 1074/1075, 1095, 1215, 4130, and 4150.

Excellent	Good	Fair	Poor
8620, E52100 D2, M2/M7, M4	41L40, A2, A6, H13	1144, 4140/4142, 4340, W1, O1, S7, S2, P20	12L14

Formability

Formability is also known as bendability. It is the ease with which a material can be shaped. All are rated in their annealed conditions.

Note: Formability is not rated for A36, 1018, 1065, 1074/1075, 4150, 4340, M4, P20, and S2.

Good	Fair	Difficult	Not Recommended
41L40, 4130, 8620, O1, W1	12L14, 4140/4142, A6, S7	1045, 1144, E52100, A2, D2, H13, M2/M7	1215

Warning! ***Hardness and yield strength are not guaranteed and are intended only as a basis for comparison.***

General Purpose Low-Carbon Steel

Often used for structural and automotive applications, this low-carbon steel also has good weldability.

Rectangular Bars—Unpolished Mill Finish (Cold Finished)

- Hardness: Rockwell B72-B86
- Yield Strength: 45,000-55,000 psi
- Furnished as drawn

Meet ASTM A108. This 1018 carbon steel material can be surface hardened to a maximum attainable hardness of Rockwell C60-C62. Thickness and width tolerances are –0.005″ for 1/8″-3″ sizes and –0.008″ for 3 1/4″-6″ sizes. Flatness tolerance is not rated. Length tolerance is ±1/8″ for 6″ lengths, ±1″ for 1-ft. lengths, ±3″ for 3-ft. lengths, and ±6″ for 6-ft. lengths.

To Order: Please specify 1-, 3-, or 6-ft. length where prices are shown.

General Purpose Low-Carbon Steel *(Material continued from previous page)*

Often used for structural and automotive applications, this low-carbon steel also has good weldability.

Rectangular Bars—Unpolished Mill Finish (Cold Finished) (Cont.)

- Hardness: Rockwell B72-B86
- Yield Strength: 45,000-55,000 psi
- Furnished as drawn

Meet ASTM A108. This 1018 carbon steel material can be surface hardened to a maximum attainable hardness of Rockwell C60-C62. Thickness and width tolerances are –0.005″ for 1/8″-3″ sizes and –0.008″ for 3 1/4″-6″ sizes. Flatness tolerance is not rated. Length tolerance is ±1/8″ for 6″ lengths, ±1″ for 1-ft. lengths, ±3″ for 3-ft. lengths, and ±6″ for 6-ft. lengths.

To Order: Please specify 1-, 3-, or 6-ft. length.

Rectangular Bars with Rounded Edges—Unpolished Mill Finish (Cold Finished)

- Hardness: Rockwell B80
- Yield Strength: 35,000 psi
- Cold rolled

Material is 1008-1010 carbon steel. Thickness and width tolerances are ±0.005″. Flatness tolerance is not rated. Length tolerance is ±0.015″.

Rectangular Bars—Nickel Coated

- Hardness: Rockwell C45-C50 (with coating)
- Yield Strength: 45,000 psi
- Cold rolled (before coating)

Material is 1018 carbon steel and has a 0.0003″-0.0007″ thick nickel coating (also called electroless nickel) that improves wear and corrosion resistance. Coating meets AMS 2404, ASTM B733, and MIL-C-26074. Thickness tolerance is ±0.002″. Width tolerance is ±0.004″. Flatness tolerance is not rated. Length tolerance is +1/16″.

To Order: Please specify 1- or 3-ft. length.

Rectangular Bars—Zinc Galvanized

- Hardness: Rockwell B66-B68 (with coating)
- Yield Strength: 30,000-44,000 psi
- Cold rolled (before coating)

Meet ASTM A108. Material is 1010 carbon steel and has a 0.0002″ thick zinc coating to make it more corrosion resistant. Thickness tolerance is ±0.008″. Width tolerance is ±0.010″. Flatness tolerance is not rated. Length tolerance is ±1/8″.

To Order: Please specify 1-, 3-, or 6-ft. length where prices are shown.

General Purpose Low-Carbon Steel *(Material continued from previous page)*

Perforated Rectangular Bars—Zinc Galvanized

8962K28 & K26

- Hardness: Not rated
- Yield Strength: Not rated
- Cold rolled (before coating)

Material is 1006-1020 carbon steel with a G60 coating that offers improved corrosion resistance. All holes are 3/8″ diameter on 3/4″ centers. The 1 3/8″-wd. bars have one row of holes and the 2 1/4″- and 2 3/4″-wd. bars have two rows of holes. Width tolerance is ±0.010″. Flatness tolerance is not rated. Length tolerance is ±1/8″. **To Order:** Please specify 3- or 6-ft. length.

Wd.	Thickness Tolerance		3 ft.	6 ft.

Tight-Tolerance Flat Stock—Precision Ground Finish

- Hardness: Rockwell B85
- Yield Strength: 30,000-36,000 psi
- Furnished as rolled

Material is either 1018 carbon steel or meets ASTM A36. Can be surface hardened; maximum attainable hardness is Rockwell C65. Thickness tolerance is ±0.001″. Width tolerance is ±0.005″. Flatness tolerance is not rated. Length tolerance is +1/4″.

Sheets—Unpolished Mill Finish (Cold Finished)

- Hardness: Not rated for 0.0299″ and 0.0598″ sizes; all others are Rockwell B85
- Yield Strength: 54,000 psi
- Cold rolled

Material is 1006-1020 carbon steel. Can be surface hardened; maximum attainable hardness is not rated. Width and length tolerances are ±1/8″. Flatness tolerance is not rated.

General Purpose Low-Carbon Steel *(Material continued from previous page)*

Often used for structural and automotive applications, this low-carbon steel also has good weldability.

Sheets—Ground Finish (Decarb Free)

- Hardness: 1/16″-3/16″ thick sheets Rockwell B85; 1/4″-2″ thick sheets not rated
- Yield Strength: 30,000-36,000 psi
- Furnished as rolled

Material is either 1018 carbon steel or meets ASTM A36. The *1/16″-3/16″ thick sheets* can be surface hardened to attain a maximum attainable hardness of Rockwell C65; width tolerance is +0.005″; flatness tolerance is not rated; length tolerance is –1/16″, +1/2″. The *1/4″-2″ thick sheets* can be surface hardened; maximum attainable hardness is not rated; width and length tolerances are ±1/8″; flatness tolerance is not rated.

Sheets—Antimicrobial Coated

- Hardness: Rockwell B55-B72
- Yield Strength: 39,000-55,000 psi
- Cold rolled, base-galvanized G-90 (before coating)

An antimicrobial coating on one side inhibits the growth of bacteria, mold, and fungi, making these sheets ideal for medical and food processing applications. Antimicrobial coating is blue. Sheets meet ASTM A653. Material is CS Type B carbon steel. Width and length tolerances are ±0.031″. Flatness tolerance is 0.625″.

Thick.	Thickness Tolerance	30″×24″		30″×48″

Sheets—Zinc Galvanized

- Hardness: Rockwell B50-B60 (with coating)
- Yield Strength: 36,000 psi
- Cold rolled (before coating), unless noted

Meet ASTM A653. Material is CS Type B carbon steel and has a G60 zinc coating to make it more corrosion resistant. Thickness tolerance is ±0.006″. Width and length tolerance is ±1/16″. Flatness tolerance is not rated.

Perforated Square Tubes—Zinc Galvanized (unless noted)

- Hardness: Not rated
- Yield Strength: 1 3/4″ and 2″ tubes 60,000 psi; all others not rated
- 1″, 1 1/4″, and 1 1/2″ tubes cold rolled (before coating); 1 3/4″ and 2″ tubes hot rolled (before coating)

The 1″-1 1/2″ tubes have a G60 coating and meet either ASTM A569 or A570. The 1 3/4″ and 2″ tubes have a heavier G90 coating for improved corrosion resistance and meet ASTM A653. Material is grade 50 carbon steel. Each size tube fits inside the next largest size, allowing you to create custom lengths. Tubes are perforated so multiple pieces can be joined and attached to objects such as signs. The 1″ and 1 1/4″ tubes have 11/32″ diameter holes on 1″ centers. The 1 1/2″-2″ tubes have 7/16″ diameter holes on 1″ centers. Straightness tolerance is not rated. Length tolerance is ±1/8″.

Rods—Chrome Coated

- Hardness: Rockwell C60-C65 (with coating)
- Yield Strength: 45,000 psi
- Cold rolled (before coating)

Material is 1018 carbon steel. All have a 0.0003″-0.0007″ thick chrome coating that meets AMS QQ-C-320 and AMS 2406. Coating provides good wear and corrosion resistance as well as extended life. Coating is not intended for aesthetic purposes. Diameter tolerance is +0.001″, –0.002″. Straightness tolerance is not rated. Length tolerance is ±1/16″.

To Order: Please specify 1- or 3-ft. length.

Dia.		1 ft.	3 ft.
1/4″	7936K31	$5.07	$11.80

1″	7936K36	34.87	81.10

Rods—Zinc Galvanized

- Hardness: Rockwell B68 (with coating)
- Yield Strength: 30,000-44,000 psi
- Cold drawn (unless noted)

Meet ASTM A108. Material is 1006-1018 carbon steel except for 7/8″ and 1″ dia. rods, which are 1035 carbon steel. A 0.0002″ thick zinc coating makes steel more corrosion resistant. Diameter tolerance is ±0.003″. Straightness tolerance is not rated. Length tolerance is ±1/8″. **To Order:** Please specify 1-, 3-, or 6-ft. length where prices are shown.

Dia.		1 ft.	3 ft.	6 ft.

General Purpose Low-Carbon Steel *(Material continued from previous page)*

Often used for structural and automotive applications, this low-carbon steel also has good weldability.

Hexagonal Bars—Unpolished Mill Finish (Cold Finished)

- Hardness: 126 Brinell
- Yield Strength: 54,000 psi
- Furnished as drawn

Meet ASTM A108. Material is 1018 carbon steel and can be surface hardened to a maximum attainable hardness of Rockwell C62. Hex size is measured across the flats. Straightness tolerance is not rated. Length tolerance is ±1″ for 1-ft. lengths, ±3″ for 3-ft. lengths, and ±6″ for 6-ft. lengths.

To Order: Please specify 1-, 3-, or 6-ft. length where prices are shown.

Hex Size	Hex Tolerance

90° Angles—Unpolished Mill Finish

- Hardness: Not rated
- Yield Strength: 36,000 psi
- Hot rolled

Meet ASTM A36. Can be surface hardened; maximum attainable hardness is not rated. All corners are rounded. Thickness tolerance is ±0.015″. Straightness tolerance is not rated. Length tolerance is ±6″.

Perforated 90° Angles—Zinc Galvanized

- Hardness: Not rated
- Yield Strength: Not rated
- Cold rolled (before coating)

Material is 1006-1020 carbon steel with a G60 coating. Zinc coating makes steel more corrosion resistant. All holes are 3/8″ diameter on 3/4″ centers. Angles have rounded outside corners and squared inside corners. Straightness tolerance is not rated. Length tolerance is ±1/8″. Leg length tolerance is ±0.010″.

To Order: Please specify 3- or 6-ft. length.

Leg Lg. × Leg Lg.		3 ft.	6 ft.
3/64″ Thick *(±0.006″)*

Machinable 1117 Low-Carbon Steel

Material has a high manganese and sulfur content to increase hardness and strength while maintaining better machinability than other low-carbon steels.

Rods—Unpolished Mill Finish (Cold Finished)

- Hardness: 137 Brinell
- Yield Strength: 58,000 psi
- Cold drawn

Meet ASTM A108. Can be surface hardened to a maximum attainable hardness of 183 Brinell. Diameter tolerance is –0.003″. Straightness tolerance is not rated. Length tolerance is ±1″ for 1-ft. lengths, ±3″ for 3-ft. lengths, and ±6″ for 6-ft. lengths.

To Order: Please specify 1-, 3-, or 6-ft. length where prices are shown.

High Strength 1045 Medium-Carbon Steel

This material is the highest strength carbon steel we offer. It has fair machinability and is often used for bolts, studs, and shaft parts.

Square Bars—Unpolished Mill Finish (Cold Finished)

- Hardness: 245 Brinell
- Yield Strength: 55,000 psi
- Annealed

Meet ASTM A108. Material can be surface hardened to a maximum attainable hardness of Rockwell C60. Flatness tolerance is not rated. Length tolerance is ±1″ for 1-ft. lengths, ±3″ for 3-ft. lengths, and ±6″ for 6-ft. lengths.

To Order: Please specify 1-, 3-, or 6-ft. length.

General Purpose 1074/1075 Spring Steel

An excellent general purpose spring steel, this material can be easily formed and heat treated. Often used for less exacting requirements, it is more formable than 1095 Spring Steel but does not have the same degree of bounce-back in the heat-treated condition.

Sheets—Unpolished Mill Finish (Cold Finished)

- Hardness: Rockwell B86
- Yield Strength: 81,000 psi
- Annealed

Meet ASTM A684. Material can be heat treated to a maximum attainable hardness of Rockwell C64. Thickness tolerance is ±0.003″. Width tolerance is ±1/64″ for 8″ widths and ±2 1/2″ for 17 1/2″ widths. Length tolerance is ±1/16″ for 12″ and 24″ lengths and ±1/2″ for 48″ lengths. Flatness tolerance is 3/8″.

Tough Wear-Resistant 1095 Spring Steel

This spring steel is engineered to meet your most demanding requirements. It has good wear resistance due to its high carbon content and is commonly used to make spring clips, washers, and parts that are repeatedly stressed. The ***annealed*** material is easy to form and can be heat treated for springlike properties. The ***spring-tempered*** material, also known as blue-tempered, is the most common spring steel.

Annealed Sheets—Unpolished Mill Finish (Cold Finished)

- Hardness: Rockwell B90
- Yield Strength: 60,000-75,000 psi
- Annealed

Meet ASTM A684. Material can be heat treated to a maximum attainable hardness of Rockwell C66. Thickness tolerance is ±0.002″ for sheets up to 0.050″ thick and ±0.003″ for sheets 0.062″-0.187″ thick. Width tolerance is ±0.016″ for 8″ widths and +5″ for 15″ widths. Flatness tolerance is 3/8″. Length tolerance is ±1/2″.

Spring-Tempered Strips and Sheets—Polished (Blue Finish)

- Hardness: Rockwell C53-C59
- Yield Strength: Not rated
- Spring tempered (hardened)

Width tolerance is ±0.005″ for strips and sheets up to 4″ wide; ±0.0236″ for strips and sheets 6″ to 12 3/8″ wide. Flatness tolerance is not rated. Length tolerance for 1- to 9-ft. lengths is +3″, −1/8″ and for 10- to 100-ft. lengths is +12″, −1″.

Warning! ***Hardness and yield strength are not guaranteed and are intended only as a basis for comparison.***

For information about steel, see page 3652.

For information on the physical, chemical, and mechanical properties of steel, go to mcmaster.com and search for **88645KAC**.

Tough Wear-Resistant 1095 Spring Steel *(Material continued from previous page)*

This spring steel is engineered to meet your most demanding requirements. It has good wear resistance due to its high carbon content and is commonly used to make spring clips, washers, and parts that are repeatedly stressed. The ***spring-tempered*** material, also known as blue-tempered, is the most common spring steel.

Spring-Tempered Strips and Sheets—Polished (Blue Finish) (Cont.)

- Hardness: Rockwell C53-C59
- Yield Strength: Not rated
- Spring tempered (hardened)

Width tolerance is ±0.005″ for strips and sheets up to 4″ wide; ±0.0236″ for strips and sheets 6″ to 12⅜″ wide. Flatness tolerance is not rated. Length tolerance for 1- to 9-ft. lengths is +3″, −⅛″ and for 10- to 100-ft. lengths is +12″, −1″.

Fatigue-Resistant 5160 Spring Steel

Due to its high carbon content this material is often used for a variety of spring applications where fatigue resistance is required, such as the manufacturing of flat springs. It is sometimes called chrome-silicon because these are its main alloying elements.

Rectangular Bars—Unpolished Mill Finish

- Hardness: Rockwell C28-C32
- Yield Strength: 97,000 psi
- Hot rolled

Meet ASTM A689. Can be heat treated to a maximum attainable hardness of Rockwell C63. Thickness tolerance is ±0.012″. Width tolerance is ±0.090″. Straightness tolerance is ⅛″ per 5 feet.

Ultra-Machinable 12L14 Carbon Steel

The addition of lead, which acts as an internal lubricant, provides superior machining characteristics, including improved surface appearance. Material is commonly used for high-speed screw machine products.

Square Bars—Unpolished Mill Finish (Cold Finished)

- Hardness: 163 Brinell
- Yield Strength: 60,000 psi
- Cold drawn

Meet ASTM A108. Can be heat treated to a maximum attainable hardness of Rockwell C55-C60. Square tolerance is –0.004″. Straightness tolerance is not rated. Length tolerance is ±1″ for 1-ft. lengths, ±3″ for 3-ft. lengths, and ±6″ for 6-ft. lengths.
To Order: Please specify 1-, 3-, or 6-ft. length where prices are shown.

High-Strength Easy-to-Machine 1144 Carbon Steel

Also known as stressproof. This medium-carbon steel offers good strength, while added sulfur gives it good machinability.

Rods—Unpolished Mill Finish (Cold Finished)

- Hardness: Rockwell C24-C27
- Yield Strength: 100,000 psi
- Cold drawn and stress relieved

Meet ASTM A311. Can be heat treated to a maximum attainable hardness of Rockwell C57-C60. Diameter tolerance is –0.006″. Straightness tolerance is not rated. Length tolerance is ±1″ for 1-ft. lengths, ±3″ for 3-ft. lengths, and ±6″ for 6-ft. lengths.
To Order: Please specify 1-, 3-, or 6-ft. length where prices are shown.

Easy-to-Machine 1215 Carbon Steel

Similar to 12L14 steel without the lead.

Rods—Unpolished Mill Finish (Cold Finished)

- Hardness: 167-187 Brinell
- Yield Strength: 60,000 psi
- Cold drawn

Meet ASTM A108. Can be heat treated; maximum attainable hardness is not rated. Straightness tolerance is 1/8″ per 5 feet. Length tolerance is ±1″ for 1-ft. lengths, ±3″ for 3-ft. lengths, and ±6″ for 6-ft. lengths.

To Order: Please specify 1-, 3-, or 6-ft. length where prices are shown.

Multipurpose 4140/4142 Alloy Steel

Also called "chrome-moly" steel because of its main alloying elements (chromium and molybdenum), which give it good fatigue, abrasion, and impact resistance. It is readily formed and machined in its annealed state and can be heat treated to increase toughness and wear resistance. Material is a good choice for crankshafts, gears, axles, and shafts.

Rectangular Bars—Unpolished Mill Finish (Cold Finished)

- Hardness: 241-245 Brinell
- Yield Strength: 60,000 psi
- Annealed

Meet ASTM A29 and A108. Can be induction hardened to a maximum surface hardness of Rockwell C58-C60 with a maximum through hardness of Rockwell C30-C40. Thickness and width tolerances are –0.012″. Straightness tolerance is not rated. Length tolerance is ±1″ for 1-ft. lengths, ±3″ for 3-ft. lengths, and ±6″ for 6-ft. lengths.

To Order: Please specify 1-, 3-, or 6-ft. length where prices are shown.

Multipurpose 4140/4142 Alloy Steel *(Material continued from previous page)*

Hardened Tight-Tolerance Flat Stock—Precision Ground Finish

- Hardness: Rockwell C28-C32
- Yield Strength: 85,000-130,000 psi
- Quenched and tempered

Thickness tolerance is ±0.001″ for 1½- and 3-ft. lengths and ±0.002″ for 6-ft. lengths. Flatness tolerance is 0.015″ for lengths up to 3 ft. and 0.03″ for 6-ft. lengths. Width tolerance is +0.005″. Length tolerance is +½″ for 1½-ft. lengths, +¾″ for 3-ft. lengths, and +1″ for 6-ft. lengths. **To Order:** Please specify 1½-, 3-, or 6-ft. length.

Multipurpose 4140/4142 Alloy Steel *(Material continued from previous page)*

Also called "chrome-moly" steel because of its main alloying elements (chromium and molybdenum), which give it good fatigue, abrasion, and impact resistance. It is readily formed and machined in its annealed state and can be heat treated to increase toughness and wear resistance. Material is a good choice for crankshafts, gears, axles, and shafts.

Sheets—Ground Finish (Decarb Free)

- Hardness: Rockwell C22
- Yield Strength: 115,000 psi
- Annealed

Can be hardened through heat treating; maximum attainable hardness is not rated. Thickness tolerance is +0.040″. Flatness tolerance is not rated. Width and length tolerances are +1/8″.

Tubes—Unpolished Mill Finish (Hot Rolled)

- Hardness: 195 Brinell
- Yield Strength: 64,000 psi
- Annealed

Meet ASTM A519. Can be induction hardened to a maximum surface hardness of Rockwell C58-C60 with a maximum through hardness of Rockwell C30-C40. OD tolerance is ±0.025″. Straightness tolerance is not rated. Wall thickness tolerance is ±10%. Length tolerance is ±1″ for 1-ft. lengths, ±3″ for 3-ft. lengths, and ±6″ for 6-ft. lengths. **To Order:** Please specify 1-, 3-, or 6-ft. length.

Rods—Unpolished Mill Finish (Cold Finished)

- Hardness: 200-241 Brinell
- Yield Strength: 60,000 psi
- Annealed

Meet ASTM A29 and A108. Can be heat treated to a maximum attainable hardness of Rockwell C28-C40. Diameter tolerance is –0.007″ for 1/4″-2 1/2″ diameters and –0.009″ for 2 5/8″-6″ diameters. Straightness tolerance is not rated. Length tolerance is +1/8″ for 1/2″-6″ lengths and ±1″ for 1-ft. and up lengths. **To Order:** Please specify 1-, 3-, or 6-ft. length where prices are shown.

Multipurpose 4140/4142 Alloy Steel *(Material continued from previous page)*

Tight-Tolerance Rods—Precision Ground Finish

- Hardness: Rockwell B92
- Yield Strength: 60,000 psi
- Annealed

Meet ASTM A331. Can be induction hardened to a maximum surface hardness of Rockwell C55 with a maximum through hardness of Rockwell C50-C55. Diameter tolerance is –0.0005″. Straightness tolerance is 1/16″ per 3 feet. Length tolerance is ±6″. Sold in 6-ft. lengths.

Hardened Tight-Tolerance Rods—Chrome-Plated Finish

- Hardness: Rockwell C30-C32
- Yield Strength: 100,000 psi
- Quenched and tempered

Use in applications such as hydraulic cylinders. Chrome plating is 0.005″ thick. Diameter tolerance is –0.0015″. Straightness tolerance is not rated. Length tolerance is +1/16″. **To Order:** Please specify 3- or 6-ft. length.

Hardened High-Strength Rods—Unpolished Mill Finish

- Hardness: Rockwell C32
- Yield Strength: 130,000 psi
- As drawn

Also known as ETD-150, this specially modified version of 4140 alloy steel has been drawn at high temperatures to achieve greater strength; further heat treating is unnecessary. Diameter tolerance is –0.005″ for 5/8″-1 1/2″ diameters and –0.006″ for 1 3/4″ and 2″ diameters. Straightness tolerance is 3/16″ per 10 feet. Length tolerance is ±1″ for 1-ft. lengths, ±3″ for 3-ft. lengths, and ±6″ for 6-ft. lengths. **To Order:** Please specify 1-, 3-, or 6-ft. length where prices are shown.

Hardened Hexagonal Bars—Unpolished Mill Finish (Cold Finished)

- Hardness: 321 Brinell
- Yield Strength: 95,000-105,000 psi
- Quenched, tempered, and stress relieved

Meet ASTM A29, A108, and A193. Hex size is measured across the flats. Hex tolerance is –0.008″. Straightness tolerance is not rated. Length tolerance is ±1″ for 1-ft. lengths, ±3″ for 3-ft. lengths, and ±6″ for 6-ft. lengths.

To Order: Please specify 1-, 3-, or 6-ft. length where prices are shown.

Easy-to-Machine 41L40 Alloy Steel

Similar to 4140 alloy steel. The addition of lead, which acts as an internal lubricant, provides increased machinability.

Rods—Unpolished Mill Finish (Cold Finished)

- Hardness: Rockwell B96-B100
- Yield Strength: 85,000 psi
- Annealed

Meet ASTM A331. Can be heat treated to a maximum attainable hardness of Rockwell C52. Diameter tolerance is –0.004″. Straightness tolerance is 3/16″ per 10 feet. Length tolerance is ±1″ for 1-ft. lengths, ±3″ for 3-ft. lengths, and ±6″ for 6-ft. lengths. **To Order:** Please specify 1-, 3-, or 6-ft. length where prices are shown.

For information on the physical, chemical, and mechanical properties of steel, go to mcmaster.com and search for **88645KAC**.

Easy-to-Weld Aircraft-Grade 4130 Alloy Steel

This steel is very similar to 4140, but has a lower carbon content, giving it better weldability and formability while retaining good fatigue, abrasion, and impact resistance. Use it when military specifications must be met and for your most demanding structural applications.

Sheets—Unpolished Mill Finish

- Hardness: Rockwell B85
- Yield Strength: 50,000 psi
- Annealed

Meet AMS 6350-6351. Can be heat treated to a maximum attainable hardness of Rockwell C56. Sheets 0.040″-0.125″ thick are furnished cold rolled; 0.190″-0.250″ thicknesses are hot rolled. Thickness tolerance is ±0.009″. Flatness tolerance is not rated. Width and length tolerances are ±1/16″.

Rectangular Tubes—Unpolished Mill Finish (Cold Finished)

- Hardness: Rockwell C19-C26
- Yield Strength: 75,000 psi
- Annealed and stress-relieved or normalized

Meet AMS-T-6736A and MIL-T-6736B. Also known as hollow bar. Can be heat treated to a maximum attainable hardness of Rockwell C49. Width and height tolerances are ±0.020″. Straightness tolerance is 0.075″ per 3 feet. Length tolerance is ±1″.
To Order: Please specify 1-, 3-, or 6-ft. length.

Rods—Unpolished Mill Finish (Cold Finished)

- Hardness: 241 Brinell
- Yield Strength: 63,000 psi
- Normalized

Meet ASTM A108, AMS-2301-J, and AMS-6348-C. Can be heat treated to a maximum attainable hardness of Rockwell C49. Diameter tolerance is –0.006″. Straightness tolerance is not rated. Length tolerance is ±1″ for 1-ft. lengths, ±3″ for 3-ft. lengths, and ±6″ for 6-ft. lengths. **To Order:** Please specify 1-, 3-, or 6-ft. length.

For information about steel, see page 3652.

For information on the physical, chemical, and mechanical properties of steel, go to mcmaster.com and search for **88645KAC**.

Wear-Resistant 4150 Alloy Steel

Though this material is similar to 4140 alloy steel, it has a higher carbon content, which makes it harder and more wear resistant.

Rods—Unpolished Mill Finish (Cold Finished)

- Hardness: 235 Brinell
- Yield Strength: 48,000 psi
- Annealed

Meet ASTM A29 and ASTM A108. Can be heat treated to a maximum attainable hardness of Rockwell C59-C65. Diameter tolerance is –0.006″. Straightness tolerance is not rated. Length tolerance is ±1″ for 1-ft. lengths, ±3″ for 3-ft. lengths, and ±6″ for 6-ft. lengths. **To Order:** Please specify 1-, 3-, or 6-ft. length.

Easy-to-Weld Wear-Resistant 8620 Alloy Steel

Added nickel, chromium, and molybdenum give this lower-carbon steel improved weldability and wear resistance compared to 4140 alloy steel.

Rods—Unpolished Mill Finish (Cold Finished)

- Hardness: 223 Brinell
- Yield Strength: 100,000 psi
- As produced (rolled)

Meet ASTM A29 and ASTM A108. Can be heat treated to a maximum attainable hardness of Rockwell C41-C64. Diameter tolerance is –0.005″. Straightness tolerance is not rated. Length tolerance is +1/8″ for lengths less than 1 ft., ±1″ for 1-ft. lengths, ±3″ for 3-ft. lengths, and ±6″ for 6-ft. lengths. **To Order:** Please specify 1-, 3-, or 6-ft. length where prices are shown.

High-Strength Shock-Resistant 4340 Alloy Steel

Specially designed for applications involving severe impact, wear, heat, and stress, this highly alloyed steel (nickel, chromium, and molybdenum) is stronger and more shock resistant than 4140.

Rods—Unpolished Mill Finish

- Hardness: Rockwell C22
- Yield Strength: 68,500 psi
- Annealed

Can be heat treated to a maximum attainable hardness of Rockwell C40-C53. Rods with diameters of 1/2″ and 3/4″ are cold finished; all others are hot rolled. Straightness tolerance is 0.025″ per foot. Length tolerance is ±1/8″.
To Order: Please specify 1-, 3-, or 6-ft. length.

Bearing-Quality Aircraft-Grade E52100 Alloy Steel

E52100 is considered bearing quality because of its high carbon content, which gives it high hardness. It is often called chrome steel as chromium is the primary alloying element, which makes it very wear resistant.

Rods—Unpolished Mill Finish (Cold Finished)

- Hardness: 248 Brinell
- Yield Strength: 62,000-87,500 psi
- Annealed

Meet ASTM A108 and ASTM A295. Can be heat treated to a maximum attainable hardness of Rockwell C39-C65. Diameter tolerance is –0.008″. Straightness tolerance is not rated. Length tolerance is ±1″ for 1-ft. lengths, ±3″ for 3-ft. lengths, and ±6″ for 6-ft. lengths. **To Order:** Please specify 1-, 3-, or 6-ft. length where prices are shown.

Bearing-Quality High-Temperature M50 Tool Steel

Alloyed with chromium, molybdenum, and vanadium, this bearing-quality steel is suitable for applications requiring high wear resistance and strength at elevated temperatures.

Hardened Precision Balls—Reflective Finish

- Hardness: Rockwell C60-C65
- Yield Strength: 320,000 psi
- Quenched and tempered

Balls are Grade 10. Diameter tolerance is +0.00005″, –0.00004″. Sphericity is 0.00001″.

General Purpose Water-Hardened W1 Tool Steel

Because W1 is not heavily alloyed, it is one of the easiest tool steels to machine. Its high carbon content makes it suitable for many applications even without heat treating. Heat treatment results in a tough core and a hard, wear-resistant surface. Can be used for hammers and files.

Rectangular Bars—Unpolished Mill Finish (Cold Finished)

- Hardness: Rockwell B82-B93
- Yield Strength: 55,000-100,000 psi
- Annealed

Meet ASTM A686. Can be heat treated to a maximum attainable hardness of Rockwell C57-C60. Thickness and width tolerances are ±0.0005″ for 1/16″ to 3/16″ sizes and ±0.0015″ for 1/4″ to 1″ sizes. Flatness tolerance is not rated. Length tolerance is +1/8″. **To Order:** Please specify 3- or 6-ft. length.

Warning! ***Hardness and yield strength are not guaranteed and are intended only as a basis for comparison.***

For information about steel, see page 3652.

For information on the physical, chemical, and mechanical properties of steel, as well as heat-treating data for tool steel, go to mcmaster.com and search for **88645KAC**.

General Purpose Water-Hardened W1 Tool Steel *(Material continued from previous page)*

Rods—Ground Finish (Decarb Free)

- Hardness: 241 Brinell
- Yield Strength: 50,000-100,000 psi
- Annealed

Meet ASTM A686. Also known as drill rod. Can be heat treated to a maximum attainable hardness of Rockwell C60. Straightness tolerance is 0.005″ per foot. Length tolerance is ±1/4″ for 1-ft. lengths, ±1/8″ for 3-ft. lengths, and ±1/2″ for 6-ft. lengths. Rods with diameters less than 0.5000″ are sold in 3-ft. lengths. Rods with diameters of 0.5000″ and larger are sold in 1-, 3-, and 6-ft. lengths. **To Order:** Please specify 1-, 3-, or 6-ft. length where necessary.

Multipurpose Oil-Hardened O1 Tool Steel

One of the original tool steels, O1 has a good combination of machinability and resistance to wear and abrasion. It is used extensively in dies and punches for blanking, forming, and trimming, as well as in cams, bushings, guides, and gauges.

Oversize Tight-Tolerance Flat Stock—Precision Ground Finish

- Hardness: Rockwell B95
- Yield Strength: 80,000 psi
- Annealed

Meet ASTM A681. Can be heat treated to a maximum attainable hardness of Rockwell C63-C65. Thickness and width tolerances are +0.015″. Flatness tolerance is not rated. Length tolerance is +17/64″ for 1½-ft. length and +½″ for 3-ft. length. **To Order:** Please specify 1½- or 3-ft. length.

Warning! ***Hardness and yield strength are not guaranteed and are intended only as a basis for comparison.***

For information about steel, see page 3652.

For information on the physical, chemical, and mechanical properties of steel, as well as heat-treating data for tool steel, go to mcmaster.com and search for **88645KAC**.

Multipurpose Oil-Hardened O1 Tool Steel *(Material continued from previous page)*

One of the original tool steels, O1 has a good combination of machinability and resistance to wear and abrasion. It is used extensively in dies and punches for blanking, forming, and trimming, as well as in cams, bushings, guides, and gauges.

Tight-Tolerance Flat Stock—Precision Ground Finish

- Hardness: Rockwell B85-B96
- Yield Strength: 50,000-60,000 psi
- Annealed

Meets ASTM A681 (unless noted). Can be heat treated to a maximum attainable hardness of Rockwell C60-C65. Flatness tolerance is not rated. ***Inch sizes*** have a thickness tolerance of ±0.001″. Width tolerance is +0.005″. Length tolerance is +1/4″ for 1 1/2-ft. lengths and +5/8″ for 3-ft. lengths (unless noted). **To Order:** Please specify 1 1/2- or 3-ft. length. ***Metric sizes*** have a thickness tolerance of +0.05 mm. Width tolerance is +0.2 mm. Length tolerance is +8 mm. Sold in 1-meter lengths.

Multipurpose Oil-Hardened O1 Tool Steel *(Material continued from previous page)*

Tight-Tolerance Flat Stock with Material Certification—Precision Ground Finish

- Hardness: 190 Brinell
- Yield Strength: Not rated
- Annealed

Meets ASTM A681. Material type (O1) is stamped the length of the material for easy identification. Can be heat treated to a maximum attainable hardness of Rockwell C62-C64. Thickness tolerance is ±0.001″. Flatness tolerance is 0.010″. Width tolerance is –0.005″. Length tolerance is +1/4″. Sold in 1 1/2-ft. lengths. Each comes with a traceable lot number and physical test report.

Tight-Tolerance Sheets—Precision Ground Finish

- Hardness: 185 Brinell
- Yield Strength: 70,000 psi
- Annealed

Can be heat treated to a maximum attainable hardness of Rockwell C60. Thickness tolerance is ±0.001″. Flatness tolerance is not rated. Width tolerance is +0.005″. Length has a plus tolerance.

Tight-Tolerance Rods—Inch Sizes—Precision Ground Finish

- Hardness: Rockwell B89-B110
- Yield Strength: 50,000-99,000 psi
- Annealed

Meet ASTM A681. Also known as drill rod. Can be heat treated to a maximum attainable hardness of Rockwell C57-C62. Straightness tolerance is 0.005″ per foot. Length tolerance is ±1/4″. Rods with diameters less than 0.5000″ are sold in 3-ft. lengths. Rods with diameters 0.5000″ and larger are sold in 1-, 3-, and 6-ft. lengths.

To Order: Please specify 1-, 3-, or 6-ft. length where necessary.

Multipurpose Oil-Hardened O1 Tool Steel *(Material continued from previous page)*

One of the original tool steels, O1 has a good combination of machinability and resistance to wear and abrasion. It is used extensively in dies and punches for blanking, forming, and trimming, as well as in cams, bushings, guides, and gauges.

Tight-Tolerance Rods—Metric Sizes—Precision Ground Finish

- Hardness: Rockwell B89-B96
- Yield Strength: 50,000-99,000 psi
- Annealed

Meet ASTM A681 and MIL-STD-163. Also known as drill rod. Can be heat treated to a maximum attainable hardness of Rockwell C60-C62. Diameter tolerance is ±0.013 mm for 2-12 mm diameters and ±0.025 mm for 13-30 mm diameters. Straightness tolerance is not rated. Length tolerance is +1/4″. Sold in 3-ft. lengths.

Multipurpose Air-Hardened A2 Tool Steel

A very fine grain structure results in a superior-quality steel. Compared to O1 tool steel, this material has better wear resistance, which means it can hold a sharper cutting edge. Compared to D2 tool steel and other high-carbon/high-chromium steels, this material offers better machinability. Ideal for making thin parts that are usually prone to cracking during heat treating.

Tight-Tolerance Flat Stock—Precision Ground Finish

- Hardness: Rockwell B89-B99
- Yield Strength: 51,000-108,000 psi
- Annealed

Can be heat treated to a maximum attainable hardness of Rockwell C58-C65. Flatness tolerance is not rated.

Inch Sizes— Meet ASTM A681 and MIL-QQT-570A, except 1/32″ and 3/64″ thicknesses which only meet ASTM A681. Thickness tolerance is ±0.001″. Width tolerance is +0.005″. Length tolerance is +3/16″ for 3″ and 6″ lengths, +1/4″ for 1 1/2-ft. lengths, +1/2″ for 3-ft. lengths, and +1″ for 6-ft. lengths. **To Order:** Please specify 1 1/2-, 3-, or 6-ft. length where prices are shown.

Metric Sizes— Thickness tolerance is ±0.25 mm. Width tolerance is +0.15 mm. Length tolerance is +12.7 mm. Sold in 1-meter lengths.

Oversize Tight-Tolerance Flat Stock—Precision Ground Finish

- Hardness: Rockwell B89-B99
- Yield Strength: 55,000-108,000 psi
- Annealed

Meets ASTM A681 and MIL-QQT-570A. Can be heat treated to a maximum attainable hardness of Rockwell C58-C62. Thickness and width tolerances are +0.015″. Flatness tolerance is 0.010″ per foot. Length tolerance is +¼″ for 1½-ft. lengths and +½″ for 3-ft. lengths. **To Order:** Please specify 1½- or 3-ft. length.

Multipurpose Air-Hardened A2 Tool Steel *(Material continued from previous page)*

A very fine grain structure results in a superior-quality steel. Compared to O1 tool steel, this material has deeper hardening and better wear resistance, which means it can hold a sharper cutting edge. Compared to D2 tool steel and other high-carbon/high-chromium steels, it offers better machinability. Ideal for making thin parts that are usually prone to cracking during heat treating.

Tight-Tolerance Flat Stock with Material Certification—Precision Ground Finish

- Hardness: 215 Brinell
- Yield Strength: Not rated
- Annealed

Meets ASTM A681. Material type (A2) is stamped the length of the material for easy identification. Can be heat treated to a maximum attainable hardness of Rockwell C60-C62. Thickness tolerance is ±0.001″. Flatness tolerance is 0.010″. Width tolerance is +0.005″. Length tolerance is +1/4″. Sold in 1 1/2-ft. lengths. Each comes with a traceable lot number and physical test report.

Multipurpose Air-Hardened A2 Tool Steel *(Material continued from previous page)*

Tight-Tolerance Rods—Precision Ground Finish

- Hardness: Rockwell B85-B103
- Yield Strength: 55,000 psi
- Annealed

Meet ASTM A681. Also known as drill rods. Can be heat treated to a maximum attainable hardness of Rockwell C62-C65. Straightness tolerance is 0.005″ per foot. Length tolerance is ±3/16″ for 1-ft. lengths, +1/8″ for 3-ft. lengths, and ±1 1/2″ for 6-ft. lengths.

To Order: Please specify 1-, 3-, or 6-ft. lengths. Rods with 1/16″ to 31/64″ diameters are available only in 3- and 6-ft. lengths.

High-Temperature Air-Hardened H13 Tool Steel

Because it is alloyed with chromium, molybdenum, tungsten, and vanadium, this steel is able to withstand the heat, pressure, and abrasion associated with high-temperature (up to 1000° F) applications.

Oversize Flat Stock—Ground Finish (Decarb Free)

- Hardness: Rockwell B92-B99
- Yield Strength: 50,000 psi
- Annealed

Meets ASTM A681. Can be heat treated to a maximum attainable hardness of Rockwell C54. Thickness and width tolerances are +0.015″. Flatness tolerance is 0.015″. Length tolerance is +1/2″. Sold in 2-ft. lengths.

Wear-Resistant Air-Hardened D2 Tool Steel

If you're looking for a versatile high-carbon/high-chromium tool steel that has great wear and abrasion resistance, D2 is the choice for you. It also offers high hardness and is commonly used for long-run dies and blanking, as well as shear blades, burnishing tools, and gauges.

Tight-Tolerance Flat Stock—Precision Ground Finish

- Hardness: Rockwell B89-B102
- Yield Strength: 50,000 psi
- Annealed

Meets ASTM A681. Can be heat treated to a maximum attainable hardness of Rockwell C62-C65. Thickness tolerance is ±0.001″. Flatness tolerance is 0.015″ per 3 feet. Width tolerance is +0.005″. Length tolerance is +¼″ for 1½-ft. lengths and +½″ for 3-ft. lengths. **To Order:** Please specify 1½- or 3-ft. length.

Wear-Resistant Air-Hardened D2 Tool Steel *(Material continued from previous page)*

Tight-Tolerance Rods—Precision Ground Finish

- Hardness: Rockwell B89-B102
- Yield Strength: 50,000 psi
- Annealed

Meet ASTM A681. Also known as drill rod. Can be heat treated to a maximum attainable hardness of Rockwell C62-C65. Diameter tolerance is ±0.0005″ for 1/8″ to 7/16″ diameters and ±0.001″ for 1/2″ to 2″ diameters. Straightness tolerance is 0.005″ per foot. Length tolerance is ±3/16″ for 1-ft. lengths, +1/8″ for 3-ft. lengths, and ±1 1/2″ for 6-ft. lengths.

To Order: Please specify 1-, 3-, or 6-ft. length.

Shock-Resistant Water-Hardened S2 Tool Steel

An extremely rugged tool steel, S2 is used in applications requiring hardness, toughness, and resistance to shock and wear.

Hardened Balls—Reflective Finish

- Hardness: Rockwell C55-C58
- Yield Strength: 290,000 psi
- Quenched and tempered

Meet ASTM A681. Grade is 200. Diameter tolerance is ±0.002″. Sphericity is 0.0002″.

Shock-Resistant Air-Hardened S7 Tool Steel

Even under repeated shock loads, this tool steel will retain its high strength and toughness, which makes it an ideal choice for tools such as chisels, rivet sets, punches, and driver bits.

Oversize Tight-Tolerance Flat Stock—Precision Ground Finish

- Hardness: Rockwell C22-C23
- Yield Strength: 55,000-105,000 psi
- Annealed

Meets ASTM A681. Can be heat treated to a maximum attainable hardness of Rockwell C56. Width and thickness tolerances are +0.015″. Flatness tolerance is 0.015″ per 3 feet. Length tolerance is +1/2″ for 1 1/2-ft. lengths and +3/4″ for 3-ft. lengths. **To Order:** Please specify 1 1/2- or 3-ft. length.

Mold-Quality A6 Tool Steel

Often used for making plastic molds as it won't lose its shape and is easily heat treated, A6 also has good strength, wear resistance, and toughness.

Oversize Flat Stock—Ground Finish (Decarb Free)

- Hardness: 217-248 Brinell
- Yield Strength: 110,000 psi
- Annealed

Meets ASTM A681. Can be heat treated to a maximum attainable hardness of Rockwell C61-C62. Width and thickness tolerances are +0.015″. Flatness tolerance is not rated. Length tolerance is +⅜″ for 1½-ft. lengths and +⅝″ for 3-ft. lengths.

Easy-to-Machine Mold-Quality P20 Tool Steel

Furnished in a hardened condition, this material is readily machinable. It is often used to make molds for plastics and die-casting dies for low-temperature alloys such as zinc.

Hardened Rods—Unpolished Mill Finish (Decarb Free)

- Hardness: 285-340 Brinell
- Yield Strength: 110,000 psi
- Quenched and tempered

Diameter tolerance is +0.043″ for 1/2″ to 1 3/4″ diameters, +0.051″ for 2″ to 2 1/2″ diameters, +0.135″ for 3″ to 6″ diameters, +0.157″ for 8″ diameter, and +0.250″ for 10″ diameter. Straightness tolerance is 3/16″ per foot. Length tolerance is +1/4″.

To Order: Please specify 1-, 3-, or 6-ft. length where necessary.

Very Hard M2/M7 High-Speed Tool Steel

A high molybdenum content increases this material's hardness, which means it will resist softening and maintain sharp cutting edges even at elevated temperatures. It is a great choice for high-speed cutting operations such as drilling, reaming, tapping, milling, and piercing.

Tight-Tolerance Flat Stock—Precision Ground Finish

- Hardness: 255 Brinell
- Yield Strength: Not rated
- Annealed

Meets ASTM A600. Can be heat treated to a maximum attainable hardness of Rockwell C64. Thickness tolerance is ±0.001″. Flatness tolerance is not rated. Width tolerance is +0.005″. Length tolerance is +1/4″ for 1 1/2-ft. lengths and +1/2″ for 3-ft. lengths. **To Order:** Please specify 1 1/2- or 3-ft. length.

Hardened Sheets—Unpolished Mill Finish

- Hardness: Rockwell C62-C66
- Yield Strength: Not rated
- As produced (rolled)

Sheets 0.029″-0.039″ thick are furnished cold rolled and have a thickness tolerance of ±0.003″; 0.055″ thicknesses are hot rolled and have a thickness tolerance of ±0.01″. Flatness, width, and length tolerances are not rated.

Thick.		6″×12″

Tight-Tolerance Rods—Precision Ground Finish

- Hardness: Rockwell B99-B101
- Yield Strength: 105,000 psi
- Annealed

Meet ASTM A600. Also known as drill rod. Can be heat treated to a maximum attainable hardness of Rockwell C65. Diameter tolerance is ±0.0005″ for 1/16″ to 7/16″ diameters and ±0.001″ for 1/2″ to 1 1/4″ diameters. Straightness tolerance is 0.005″ per foot. Length tolerance is +1/8″. Sold in 3-ft. lengths.

Oversize Rods—Polished Finish (Decarb Free)

- Hardness: 217-255 Brinell
- Yield Strength: 60,000 psi
- Annealed

Can be heat treated to a maximum attainable hardness of Rockwell C66. Diameter tolerance is +0.045″. Straightness tolerance is 3/16″ per foot. Length tolerance is +1/4″.

To Order: Please specify 1-, 3-, or 6-ft. length.

Hardened Oversize Tight-Tolerance Rods—Precision Ground Finish

- Hardness: Rockwell C62-C64
- Yield Strength: Not rated
- Triple tempered

Also known as reamer blanks. Diameter tolerance is +0.0002″. Straightness tolerance is 0.001″. Length tolerance is ±1/32″.

Also Available: Other fractional sizes through 1″, letter sizes A to Z, and wire gauge size Nos. 1 to 80. Please ask for 3023A71 and specify size.

Very Hard M2/M7 High-Speed Tool Steel *(Material continued from previous page)*

A high molybdenum content increases this material's hardness, which means it will resist softening and maintain sharp cutting edges even at elevated temperatures. It is a great choice for high-speed cutting operations such as drilling, reaming, tapping, milling, and piercing.

Hardened Undersize Tight-Tolerance Rods—Precision Ground Finish

- Hardness: Rockwell C62-C64
- Yield Strength: Not rated
- Triple tempered

Also known as drill rods. Diameter tolerance is –0.0002″. Straightness tolerance is 0.001″. Length tolerance is ±1/32″.
Rod sets are furnished in metal indexed cases with fold-out panels for easy size selection.

Ultra-Hard M42 High-Speed Tool Steel

This material is often called cobalt steel. It also contains molybdenum, making it suitable for working the hardest metals.

Hardened Undersize Tight-Tolerance Rods—Precision Ground Finish

- Hardness: Rockwell C66-C68
- Yield Strength: Not rated
- Triple tempered

Also known as drill rod. Diameter tolerance is –0.0002″. Straightness tolerance is not rated. Length tolerance is +0.060″.

Ultra-Wear-Resistant M4 High-Speed Tool Steel

Comparable to CPM Rex M4, this material has a high vanadium content and is made from powdered metal, leading to excellent wear resistance. Ideal for cold work punches, die inserts, and cutting applications involving high speed and fine cuts.

Oversize Tight-Tolerance Flat Stock—Precision Ground Finish

- Hardness: 223-255 Brinell
- Yield Strength: 60,000 psi
- Annealed

Can be heat treated to a maximum attainable hardness of Rockwell C66. Thickness and width tolerances are +0.015″. Flatness tolerance is not rated. Length tolerance is +1/4″. Sold in 1 1/2-ft. lengths.

Oversize Rods—Polished (Decarb Free)

- Hardness: 215-280 Brinell
- Yield Strength: 60,000 psi
- Annealed

Can be heat treated to a maximum attainable hardness of Rockwell C66. Diameter tolerance is +0.017″ for 1/2″ to 1 3/4″ diameters and +0.034″ for 2″ diameter. Straightness tolerance is ±3/16″ per foot. Length tolerance is +1/4″.

To Order: Please specify 1-, 3-, or 6-ft. length.

For information on the physical, chemical, and mechanical properties of iron, as well as heat-treating data for iron, go to mcmaster.com and search for **88645KAC**.

Machinable Cast Gray Iron

- Hardness: 241 Brinell
- Yield Strength: Not rated
- Furnished as continuous cast

Because it contains graphite flakes, gray iron has greater machinability than ductile iron. It is strong, wear resistant, and known for its vibration-damping qualities. Often used in dies, molds, and automotive applications. Material can be heat treated to a maximum attainable hardness of Rockwell C50. Material is oversized to finish to dimensions ordered.

Flat Stock—Unpolished Mill Finish

To Order: Please specify 1- or 2-ft. length where prices are shown.

High-Strength Cast Ductile Iron

- Hardness: 229 Brinell
- Yield Strength: 55,000 psi
- Furnished as continuous cast

Also known as nodular iron, this high-strength iron contains rounded graphite spheres that make it stronger and more shock resistant than gray iron. It is commonly used for crankshafts, gears, and hinges. Material meets ASTM A536 and can be heat treated to a maximum attainable hardness of Rockwell C50. Material is oversized to finish to dimensions ordered.

About Stainless Steel

Stainless steel is an alloy of iron that has had at least 10% chromium added to improve corrosion resistance. The designation 18-8 refers to stainless steel that has approximately 18% chromium and 8% nickel—it generally applies to types 301, 302, 303, and 304.

Most types of stainless steel harden while being worked and cannot be hardened by heat treating. They usually are provided in an annealed (not hardened) condition although some of these alloys, such as Type 301, may be work-hardened to a greater hardness (½ hard, full hard, or spring temper) for applications such as springs.

Other types of stainless steel, such as Type 410 and Type 440C, can be heat treated to improve strength and toughness. Usually these are provided in an annealed (not hardened) condition to make them easier to work. They also may be heat treated after the final product is formed to achieve better strength and toughness. For applications requiring limited machining and cutting prior to use, some alloys are provided already heat treated.

Type	Page(s)	Type	Page(s)	Type	Page(s)
13-8 PH	3707	303	3698-3700	420	3706-3707
15-5 PH	3707	304	3686-3692	420V	3707
17-4 PH	3708-3709	309	3701-3702	430	3693
20	3697	316	3694-3697	440A	3707
2205	3702-3703	321	3702	440C	3704-3706
301	3692-3693	410	3703-3704	A286	3697
302	3692	416	3700-3701	Nitronic 60	3697

Hardness

The hardness of a material is its resistance to another material penetrating its surface. Harder metals have more wear resistance, but they are also more brittle. *Note:* The types listed below are annealed (unless noted).

Yield Strength

Yield strength is the point at which metal bends and will not return to its original shape. At this point the metal has changed shape permanently but does not break. *Note:* The types listed below are annealed (unless noted). 13-8 PH and 420V are not rated.

Forming and Working

Stainless steel offers excellent forming and working (also known as bendability) due to its mechanical properties.
Note: 302, 20, and 15-5 PH are not rated.

	Excellent	Good	Fair	Difficult
Blanking	301, 410	303, 304, 309, 316, 321, 430, Hardened 440A	13-8 PH, 17-4 PH, 2205, 416, 420, Hardened 440C	420V, 440C, A286, Nitronic 60
Brake Forming	321, 410	304, 316, 430	13-8 PH, 2205, 301, 309, 420, 440C, Hardened 440C, A286	17-4 PH, 303, 416, 420V, Hardened 440A, Nitronic 60
Punching	410	301, 303, 304, 316, 321, 416, 430	13-8 PH, 17-4 PH, 2205, 309, 420, 420V, Hardened 440C, A286	440C, Hardened 440A, Nitronic 60
Sawing	301	17-4 PH, 2205, 303, 410, 416, 420V, 430, Hardened 440C	13-8 PH, 304, 309, 316, 321, 420, 440C, A286, Nitronic 60	Hardened 440A

Machinability

Stainless steel is more difficult to cut, drill, ream, tap, thread, etc. than steel because of its higher strength and hardness. It tends to become gummy when machined, however, high-speed steel tooling generally can be used. The ratings given are in relation to speed, life of the tooling, and the ease of attaining a satisfactory post-machining finish.

Good	Fair	Poor
303, 410, 430	13-8 PH, 17-4 PH, 2205, 301, 304, 316, 321, 416, 420, 420V, 440C, Hardened 440C, A286	15-5 PH, 20, 302, 309, Hardened 440A, Nitronic 60

Weldability

Stainless steel is more difficult to weld than steel due to the additional cleaning and machining required to create a weldable surface that won't corrode.

Note: 302 and 15-5 PH are not rated.

Good	Fair	Difficult
17-4 PH, 20, 301, 304, 309, 316, 321, Nitronic 60	13-8 PH, 2205, 410, 420, 430, A286	303, 416, 420V, 440C, Hardened 440A, Hardened 440C

Corrosion Resistance

Excellent—Resists outdoor, industrial, marine, and most chemical environments.

Good—Resists outdoor, industrial, marine, and mild chemical environments.

Fair—Resists outdoor, industrial, and mild chemical environments.

Poor—Resists outdoor environments.

Excellent	Good	Fair	Poor
20, 2205, 302, 316, Hardened 440A, A286, Nitronic 60	17-4 PH, 321	13-8 PH, 301, 303, 304, 309, 420V, Hardened 440C	15-5 PH, 410, 416, 420, 430, 440C

Warning! ***Hardness and yield strength are not guaranteed and are intended only as a basis for comparison.***

For information about stainless steel, see page 3685.

For information on the chemical composition of stainless steel alloys, as well as physical and mechanical properties, go to mcmaster.com and search for **8984KAC**.

Multipurpose Stainless Steel (Type 304)

The most widely used stainless steel, Type 304 has good weldability and formability and maintains corrosion resistance up to 1500° F. Commonly used in chemical and food processing equipment. It may become slightly magnetic when worked and is not heat treatable.

Rectangular Bars—Unpolished (Mill) Finish

- Hardness: 140-255 Brinell
- Yield Strength: 30,000 psi
- Annealed

The 6″×6″ bars meet ASTM A240 and A480. The 1-, 3-, and 6-ft. length bars in 1/8″ to 1/2″ thicknesses are hot rolled (unless noted); in 5/8″ to 2″ thicknesses are cold finished. The 6″×6″ bars are hot rolled. Width tolerance is ±1/8″. Straightness tolerance is not rated. Length tolerance is ±1/8″ for 6″ lengths, ±1″ for 1-ft. lengths, ±3″ for 3-ft. lengths, and ±6″ for 6-ft. lengths.

To Order: Please specify 1-, 3-, or 6-ft. length where prices are shown.

Rectangular Bars with Material Certification—Unpolished (Mill) Finish

- Hardness: 150-241 Brinell
- Yield Strength: 35,000 psi
- Annealed

Meet ASTM A276 and A479. Each comes with a traceable lot number and physical test report. Bars are hot rolled. Straightness tolerance is 0.0375″ per 3 feet. Length tolerance is ±3″ for 3-ft. lengths and ±6″ for 6-ft. lengths.

To Order: Please specify 3- or 6-ft. length.

Multipurpose Stainless Steel (Type 304) *(Material continued from previous page)*

Strips

Unpolished (#2B Mill)

Brushed (#3 Satin)

- Hardness: *Unpolished*, 163 Brinell; *Brushed*, 202 Brinell
- Yield Strength: 30,000 psi
- Annealed

Meet ASTM A240. Strips are cold finished. Length tolerance is ±1/8″.

Unpolished (#2B Mill) Finish— Width tolerance is ±0.005″. Flatness tolerance is 0.040″.

Brushed (#3 Satin) Finish— Strips are polished to a brushed finish on one side with grain lines in one direction. The polished side has a peel-off protective masking. Meet MIL-S-5059 and AMS5513. Width tolerance is ±1/16″. Flatness tolerance is 1/2″.

Sheets

Unpolished (#2B Mill)

Brushed (#3 Satin)

Brushed (#4 Satin)

Mirror-Like (#8)

- Hardness: 150-241 Brinell
- Yield Strength: 30,000 to 40,000 psi
- Annealed

Meet ASTM A240. All are cold finished, except sheets 0.375″ thick and thicker, which are hot rolled. Sheets have a peel-off protective masking on one side.

Unpolished (#2B Mill) Finish— The most widely used finish, it has a semireflective appearance on one side. Width and length tolerances are ±1/16″. Flatness tolerance is not rated. **Also Available:** 0.036″ thick sheets in larger sizes. For 30″×96″ size, please ask for 8983K18; for 48″×48″ size, please ask for 8983K12.

Brushed (#3 Satin) Finish— Polished to a brushed finish on one side with grain lines in one direction. Sheets also meet ASTM A167. Width and length tolerances are ±1/16″. Flatness tolerance is ±1/8″.

Brushed (#4 Satin) Finish— Polished to a fine brushed finish on one side with grain lines in one direction. Width and length tolerances are ±1/8″. Flatness tolerance is not rated.

Mirror-Like (#8) Finish— Polished to a mirror-like finish on one side with no grain lines. Sheets also meet ASTM A167. Width and length tolerances are ±1/32″. Flatness tolerance is not rated.

Finish Selector Pack— Includes one individually marked piece each of the four finishes listed above. Each piece is approximately 1 3/4″×3″×1/32″ thick.

1113T11 ..... **Pkg.** $25.33

For information on the chemical composition of stainless steel alloys, as well as physical and mechanical properties, go to mcmaster.com and search for **8984KAC**.

Multipurpose Stainless Steel (Type 304) *(Material continued from previous page)*

The most widely used stainless steel, Type 304 has good weldability and formability and maintains corrosion resistance up to 1500° F. Commonly used in chemical and food processing equipment. It may become slightly magnetic when worked and is not heat treatable.

Textured Sheets—Unpolished (#2B Mill) Finish

Weave

Diamond

Honeycomb

Tread

- Hardness: Rockwell B92
- Yield Strength: 30,000 psi
- Annealed

Meet ASTM A480. Textured sheets have less surface contact area, which reduces friction and static cling, increases rigidity, and hides fingerprints and dents. Sheets are cold finished. Width and length tolerances are +⅛″. Flatness tolerance is not rated.

To Order: Please specify pattern: weave, diamond, honeycomb, or tread.

Texture Selector Pack—Includes one 1⅝″×3⅛″×0.018″ thick piece each of the four texture styles listed above.

Machinable Sheets—Unpolished (Mill) Finish

- Hardness: 153-201 Brinell
- Yield Strength: 30,000 psi
- Annealed

Meet ASTM A240 and A480 and AMS5513. Also known as Prodec, this stainless steel offers faster machining and longer tool life than standard Type 304 stainless steel. Sheets are hot rolled. Width and length tolerances are ±⅛″. Flatness tolerance is not rated.

Tight-Tolerance Blanks with Material Certification—Precision Ground Finish

- Hardness: 163 Brinell
- Yield Strength: 40,000 psi
- Annealed

Meet ASTM A167 and A240 and AMS5513. These precision ground blanks are consistently flat, square, and parallel on all six sides, so you can immediately put them in your CNC machine and start machining. Each comes with a traceable lot number and physical test report. Blanks are hot rolled. Tolerance on all dimensions is ±0.002″.

Warning! ***Hardness and yield strength are not guaranteed and are intended only as a basis for comparison.***

For information about stainless steel, see page 3685.

For information on the chemical composition of stainless steel alloys, as well as physical and mechanical properties, go to mcmaster.com and search for **8984KAC**.

Multipurpose Stainless Steel (Type 304) *(Material continued from previous page)*

Rectangular Tubes

- Hardness: 192 Brinell, unless noted
- Yield Strength: 30,000 psi, unless noted
- Annealed, unless noted

Meet ASTM A554. Tubes are cold finished. Also known as hollow bar. Outside and inside corners are rounded. Straightness tolerance is 0.075″ per 3 feet. Length tolerance is ±1/8″. **To Order:** Please specify 1-, 3-, or 6-ft. length.

Brushed (#4 Satin) Finish—Polished to a fine brushed finish with grain lines in one direction.

Small-Diameter Round Tubes—Unpolished (Mill) Finish

- Hardness: Not rated
- Yield Strength: 35,000 psi
- Annealed

Meet ASTM A269. This dual-certified Type 304/304L stainless steel is a reduced carbon version of Type 304. OD tolerance is ±0.005″. Straightness tolerance is not rated. Length tolerance is ±1/32″. **To Order:** Please specify 1- or 6-ft. length where prices are shown.

(Material continued on following page)

Warning! ***Hardness and yield strength are not guaranteed and are intended only as a basis for comparison.***

For information about stainless steel, see page 3685.

For information on the chemical composition of stainless steel alloys, as well as physical and mechanical properties, go to mcmaster.com and search for **8984KAC**.

Multipurpose Stainless Steel (Type 304) *(Material continued from previous page)*

The most widely used stainless steel, Type 304 has good weldability and formability and maintains corrosion resistance up to 1500° F. Commonly used in chemical and food processing equipment. It may become slightly magnetic when worked and is not heat treatable.

Round Tubes—Mirror-Like (#7) Finish

- Hardness: Not rated
- Yield Strength: Not rated
- Work hardened

Meet ASTM A554. Tubes are cold finished. All are polished to a highly reflective finish with minimal grain lines. OD tolerance is ±0.005″ for ¾″ to 1″ sizes and ±0.008″ for 1¼″ and 1½″ sizes. Straightness tolerance is 0.030″ per 3 feet. Length tolerance is +⅛″. **To Order:** Please specify 3- or 6-ft. length.

Rods—Unpolished (Mill) Finish

- Hardness: 140-223 Brinell
- Yield Strength: 30,000 to 35,000 psi
- Annealed

Meet ASTM A276 and A479. 1-, 3-, and 6-ft. lengths are cold finished (except 4″ diameter, which is hot rolled) and made of dual-certified Type 304/304L stainless steel, a reduced carbon version of Type 304. ½″ to 3″ lengths may be cold finished or hot rolled. Straightness tolerance is not rated. Length tolerance is ±1/16″ for ½″ to 3″ lengths (unless noted), ±½″ for 1-ft. lengths, ±1½″ for 3-ft. lengths, and ±3″ for 6-ft. lengths. **To Order:** Please specify 1-, 3-, or 6-ft. length where prices are shown.

Also Available: Rods with material certification. Each comes with a traceable lot number and physical test report. Offered in the same diameters and lengths listed below. Please ask for 1301T16 and specify diameter and length.

Machinable Rods—Unpolished (Mill) Finish

- Hardness: 154 Brinell, except ⅜″ to ¾″ diameters are 201 Brinell
- Yield Strength: 30,000 to 44,000 psi, except ⅜″ to ¾″ diameters are 45,000 to 97,000 psi
- Annealed

Meet ASTM A276 and A479 as well as AMS5639 and AMS5647. Also known as Project 70+, this stainless steel offers better machinability for an improved finish and longer tool life. It's dual-certified Type 304/304L stainless steel, which is a reduced carbon version of Type 304. Rods are cold finished. Straightness tolerance is 1/16″ per 5 feet. Length tolerance is ±1″ for 1-ft. lengths, ±3″ for 3-ft. lengths, and ±6″ for 6-ft. lengths. **To Order:** Please specify 1-, 3-, or 6-ft. length where prices are shown.

U-Channels—Unpolished (Mill) Finish

- Hardness: Not rated
- Yield Strength: 42,000 psi
- Annealed

Meet ASM A276 and A479 and AMS5639. U-channels are hot rolled. Inside corners and leg edges are rounded; outside corners are squared. Base tolerance is ±0.062″. Straightness tolerance is 1/8″ per 5 feet. Leg tolerance is ±3/32″. Length tolerance is ±1″ for 1-ft. lengths, ±3″ for 3-ft. lengths, and ±6″ for 7-ft. lengths. **To Order:** Please specify 1-, 3-, or 7-ft. length.

★ Hardness is not rated.

(Material continued on following page)

Warning! ***Hardness and yield strength are not guaranteed and are intended only as a basis for comparison.***

For information about stainless steel, see page 3685.

For information on the chemical composition of stainless steel alloys, as well as physical and mechanical properties, go to mcmaster.com and search for **8984KAC**.

Multipurpose Stainless Steel (Type 304) *(Material continued from previous page)*

The most widely used stainless steel, Type 304 has good weldability and formability and maintains corrosion resistance up to 1500° F (except for balls, which are not rated for temperature). Commonly used in chemical and food processing equipment. It may become slightly magnetic when worked and is not heat treatable.

T-Bars—Unpolished (Mill) Finish

- Hardness: 156 Brinell
- Yield Strength: 30,000 psi
- Annealed

Meet ASTM A276 and A479. T-bars are hot rolled. Edges are rounded. Height and width tolerances are ±0.141″, except 1″×1″ and 1½″×1½″ sizes are ±0.078″. Flatness tolerance is not rated. Straightness tolerance is not rated. Length tolerance is ±1″ for 1-ft. lengths, ±3″ for 3-ft. lengths, and ±6″ for 6-ft. lengths. **To Order:** Please specify 1-, 3-, or 6-ft. length.

Half Rounds—Unpolished (Mill) Finish

- Hardness: Rockwell B80
- Yield Strength: 45,000 psi
- Annealed

Meet ASTM A276 and A479 and AMS5639. Half rounds are cold finished. Diameter tolerance is ±0.002″. Straightness tolerance is not rated. Length tolerance is ±1″ for 1-ft. lengths, ±3″ for 3-ft. lengths, and ±6″ for 6-ft. lengths.
To Order: Please specify 1-, 3-, or 6-ft. length.

Wear-Resistant Multipurpose Stainless Steel (Type 301)

Commonly used for fasteners and springs, this chromium-nickel (austenitic) stainless steel offers better wear resistance and fatigue strength than Type 304. It also has good weldability and maintains corrosion resistance up to 1550° F. May be slightly magnetic. Not heat treatable.

Sheets—Unpolished (Mill) Finish

- Hardness: *1/4 Hard*, Rockwell C25; *1/2 Hard*, Rockwell C32; *Full Hard*, Rockwell C41
- Yield Strength: *1/4 Hard,* 75,000 psi; *1/2 Hard*, 110,000 psi; *Full Hard*, 140,000 psi

Meet ASTM A240 and MIL-S-5059. Sheets are cold finished. Width and length tolerances are ±1/32″. Flatness tolerance is not rated.

Use ***1/4 hard*** sheets for light drawing, stretching, and forming operations where heat and corrosion resistance are needed. Sheets also meet AMS5517. Use ***1/2 hard*** when forming applications require greater hardness and yield strength. Sheets also meet AMS5518. ***Full hard*** sheets are cold worked to the ideal mechanical properties desired for springs. Sheets also meet AMS5519.

Spring-Tempered Strips—Unpolished (#2B Mill) Finish

- Hardness: Rockwell C42
- Yield Strength: 147,000 psi
- Spring tempered

Meet ASTM A666. Strips are cold finished. Width tolerance is ±0.005″ for 1/8″ to 4″ widths; ±0.010″ for 6″ to 12″ widths. Flatness tolerance is not rated. Length tolerance is ±1″.

Economy-Grade Stainless Steel (Type 430)

Chosen more for aesthetic purposes, this chromium-based (ferritic) alloy has good formability and is magnetic. Considered a room temperature alloy, Type 430 is not recommended for temperature extremes or outdoor use. Not heat treatable.

Strips—Unpolished (#2B Mill) Finish

- Hardness: Rockwell B88
- Yield Strength: 30,000 psi
- Annealed

Meet ASTM A240. All have a peel-off protective film on one side. Width tolerance is ±0.005″. Flatness tolerance is not rated. Length tolerance is ±1/32″.

Sheets

- Hardness: Rockwell B75-B88
- Yield Strength: 30,000 to 50,000 psi
- Annealed

Meet ASTM A240. All except 6″×12″ sheets also meet AMS5504. Width and length tolerances are ±1/32″. Flatness tolerance is 1/8″ for all sheets, except 6″×12″ sheets are not rated.

Unpolished (#2B Mill) Finish—6″×12″ sheets have a peel-off protective film on one side.

Brushed (#3 Satin) Finish—Polished to a brushed finish on one side with grain lines in one direction. The polished side has a peel-off protective film.

Warning! Hardness and yield strength are not guaranteed and are intended only as a basis for comparison.

For information about stainless steel, see page 3685.

For information on the chemical composition of stainless steel alloys, as well as physical and mechanical properties, go to mcmaster.com and search for **8984KAC**.

Super-Corrosion-Resistant Stainless Steel (Type 316)

With its higher molybdenum content, Type 316 stainless steel has better corrosion resistance than Type 304 so it is often used in applications such as chemical processing. Type 316 is a low carbon chromium-nickel (austenitic) stainless steel with good weldability and temperature resistance. It maintains corrosion resistance up to 800° F and may become slightly magnetic when worked. Not heat treatable.

Rectangular Bars—Unpolished (Mill) Finish

- Hardness: Rockwell B82-B95
- Yield Strength: 25,000 to 42,000 psi
- Annealed

Meet ASTM A276 and A479. All are dual-certified 316/316L (unless noted), which is a lower carbon version of Type 316 stainless steel. Bars are hot rolled, unless noted. Straightness tolerance is not rated. Length tolerance is ±1″ per foot. **To Order:** Please specify 1-, 3-, or 6-ft. length where prices are shown.

Sheets

Unpolished (#2B Mill) Finish

Brushed (#4 Satin) Finish

Mirror-Like (#8) Finish

- Hardness: 200-217 Brinell
- Yield Strength: 30,000 psi
- Annealed

Meet ASTM A240 and MIL-S-5059. Sheets are cold finished. All have a peel-off protective masking on one side. Flatness tolerance is 1/2″.

Unpolished (#2B Mill) Finish—Has a semireflective appearance on both sides. Also meets AMS5507. Width and length tolerances are ±1/8″.

Brushed (#4 Satin) Finish—Polished to a fine brushed finish on one side with grain lines in one direction. Also meets ASTM A167. Width and length tolerances are ±1/32″.

Mirror-Like (#8) Finish—Polished to a mirror-like finish on one side with no grain lines. Also meets ASTM A167. Width and length tolerances are ±1/32.″

Finish Selector Pack—Includes one individually marked 1 3/4″ × 3″ × 1/32″ thick piece of each finish above.

1121T11 ..... **Pkg.** $32.00

Super-Corrosion-Resistant Stainless Steel (Type 316) *(Material continued from previous page)*

Thick Sheets—Unpolished (Mill) Finish

- Hardness: 215 Brinell
- Yield Strength: 30,000 to 42,000 psi
- Annealed

Meet ASTM A240. All are dual-certified 316/316L, which is a reduced carbon version of Type 316. Sheets are hot rolled. Width and length tolerances are ±1/16″. Flatness tolerance is not rated.

Thick.	Thick. Tolerance	6″×6″		12″×12″		12″×24″		24″×24″		24″×48″

Tight-Tolerance Blanks with Material Certification—Precision Ground Finish

- Hardness: 211 Brinell
- Yield Strength: 30,000 psi
- Annealed

Meet ASTM A167 and A240. These blanks are consistently flat, square, and parallel on all six sides, so you can immediately put them in your CNC machine and start machining. Each comes with a traceable lot number and physical test report. Blanks are hot rolled. Tolerance on all dimensions is ±0.002″.

Rectangular Tubes—Unpolished (Mill) Finish

- Hardness: 192-217 Brinell
- Yield Strength: 25,000 to 40,000 psi
- As welded condition

Meet ASTM A554. This dual-certified Type 316/316L stainless steel is a reduced carbon version of Type 316. Tubes are cold finished. Also known as hollow bar. Outside and inside corners are rounded. Straightness tolerance is 0.075″ per 3 feet. Length tolerance is ±1″ for 1-ft. lengths, ±3″ for 3-ft. lengths, and ±6″ for 6-ft. lengths. **To Order:** Please specify 1-, 3-, or 6-ft. length.

Metric Rods—Unpolished (Mill) Finish

- Hardness: Rockwell B80-B90, unless noted
- Yield Strength: 29,000 to 31,000 psi
- Annealed

Rods are cold finished. Diameter tolerance is −0.036 mm. Straightness tolerance is not rated. Length tolerance is +66 mm, −6 mm. Sold in 1-meter lengths.

Dia.			Dia.			Dia.			Dia.		
2 mm	1335T21 ♦	$9.76	6 mm	1335T25	$22.17	10 mm	1335T29	$69.64	14 mm	1335T33	$103.80

♦ Hardness is Rockwell B95-B97.

(Material continued on following page)

Warning! ***Hardness and yield strength are not guaranteed and are intended only as a basis for comparison.***

For information about stainless steel, see page 3685.

For information on the chemical composition of stainless steel alloys, as well as physical and mechanical properties, go to mcmaster.com and search for **8984KAC**.

Super-Corrosion-Resistant Stainless Steel (Type 316) *(Material continued from previous page)*

With its higher molybdenum content, Type 316 stainless steel has better corrosion resistance than Type 304 so it is often used in applications such as chemical processing. Type 316 is a low carbon chromium-nickel (austenitic) stainless steel with good weldability and temperature resistance. It maintains corrosion resistance up to 800° F and may become slightly magnetic when worked. Not heat treatable.

Rods—Unpolished (Mill) Finish

- Hardness: 135-215 Brinell
- Yield Strength: 30,000 to 60,000 psi
- Annealed

Meet ASTM A276 and A479. The 1/2″ to 3″ long rods also meet ASTM A182, A193, and A484. All are cold finished, except 3 5/8″ to 8″ diameters, which are hot rolled. The 1-, 3-, and 6-ft. length rods are dual-certified Type 316/316L stainless steel, which is a reduced carbon version of Type 316 stainless steel. Straightness tolerance is not rated. Length tolerance is +1/8″ for 1/2″ to 3″ lengths, ±1/2″ for 1-ft. lengths, ±1 1/2″ for 3-ft. lengths, and ±3″ for 6-ft. lengths. **To Order:** Please specify 1-, 3-, or 6-ft. length where prices are shown.

Also Available: 1-, 3-, and 6-ft. lengths shown below, with material certification. Each comes with a traceable lot number and physical test report. Please ask for 1305T778 and specify diameter and length.

Tight-Tolerance Rods—Precision Ground Finish

- Hardness: 150-180 Brinell
- Yield Strength: 30,000 to 40,000 psi
- Annealed

Meet AMS5648 and MIL-S-7720. The 1/8″ to 1/2″ diameter rods also meet ASTM A580; 5/8″ diameter and larger rods also meet ASTM A276. Rods are cold finished. Diameter tolerance is ±0.0005″. Straightness tolerance is 1/8″ per 5 feet, except 1/8″ to 3/8″ diameters are not rated. Length tolerance for 1-ft. lengths is ±1″, 3-ft. lengths is ±3″, and 6-ft. lengths is ±6″. **To Order:** Please specify 1-, 3-, or 6-ft. length where prices are shown.

Machinable Rods—Unpolished (Mill) Finish

- Hardness: 150 Brinell, except 3/8″ to 3/4″ diameters are 203 Brinell
- Yield Strength: 33,000 to 42,000 psi, except 3/8″ to 3/4″ diameters are 80,000 to 88,000 psi
- Annealed

Meet ASTM A276 and A479 as well as AMS5648 and AMS5653. Also known as Project 70+, this stainless steel offers better machinability for an improved finish and longer tool life. It's dual-certified Type 316/316L stainless steel, which is a reduced carbon version of Type 316. Rods are cold finished. Diameter tolerance is ±0.002″ for 3/8″ to 7/8″ diameters and ±0.003″ for 1″ to 2″ diameters. Straightness tolerance is 1/16″ per five feet. Length tolerance is ±1″ for 1-ft. lengths, ±3″ for 3-ft. lengths, and ±6″ for 6-ft. lengths. **To Order:** Please specify 1-, 3-, or 6-ft. length where prices are shown.

Passivated Rods—Unpolished (Mill) Finish

- Hardness: 235 Brinell
- Yield Strength: 30,000 to 45,000 psi
- Annealed

Meet ASTM A276, A479, and A484, AMS5648 and AMS-S-7720, and MIL-S-7720. Rods are passivated for improved corrosion resistance. All are cold finished. Diameter tolerance is ±0.004″. Straightness tolerance is not rated. Length tolerance is ±1/16″. Sold in 6-ft. lengths.

Super-Corrosion-Resistant Stainless Steel (Type 316) *(Material continued from previous page)*

Hexagonal Bars—Unpolished (Mill) Finish

- Hardness: 160 Brinell
- Yield Strength: 30,000 psi
- Annealed

Meet ASTM A182, A193, A276, A479, and A484, and AMS5648 and 5653. This dual-certified Type 316/316L stainless steel is a reduced carbon version of Type 316. Hex bars are cold finished. Hex size is measured across the flats. Hex size tolerance is –0.008″. Straightness tolerance is not rated. Length tolerance is ±1″ for 1-ft. lengths, ±3″ for 3-ft. lengths, and ±6″ for 6-ft. lengths. **To Order:** Please specify 1-, 3-, or 6-ft. length.

90° Angles—Unpolished (Mill) Finish

- Hardness: 160-235 Brinell
- Yield Strength: 30,000 psi
- Annealed

Meet ASTM A276 and A479. Angles are hot rolled. Inside corner and leg edges are rounded; outside corner is squared. Leg length tolerance is ±1/8″. Thickness and straightness tolerances are not rated. Length tolerance is ±1″ for 1-ft. lengths, ±3″ for 3-ft. lengths, and ±7″ for 7-ft. lengths. **To Order:** Please specify 1-, 3-, or 7-ft. length.

Super-Corrosion-Resistant Stainless Steel (A286)

This heat-treatable alloy has corrosion resistance similar to Type 316 and contains titanium for increased strength. It retains its strength in high and low temperatures and maintains corrosion resistance up to 1500° F. Nonmagnetic. Heat treatable.

Sheets—Unpolished (Mill) Finish

- Hardness: Rockwell B90
- Yield Strength: 50,000 psi
- Annealed

Meet AMS5525. Can be heat treated to a maximum attainable hardness of Rockwell C30-C35. Sheets are cold finished. Width and length tolerances are ±1/16″. Flatness tolerance is 1/4″ per 3 feet.

Thick.	Thick. Tolerance	*6″×6″*		*12″×12″*		*12″×24″*		*24″×24″*		*24″×48″*

Super-Corrosion-Resistant Stainless Steel (Nitronic 60)

The addition of nitrogen gives Nitronic 60 better corrosion resistance than Type 304 plus more strength in temperature extremes. Commonly used in the chemical industry. Nonmagnetic. Not heat treatable. Maximum temperature for corrosion resistance is not rated.

Rods—Unpolished (Mill) Finish

- Hardness: 229 Brinell
- Yield Strength: 50,000 psi
- Annealed

Meet ASTM A276 and A479 as well as AMS5848. Rods are hot rolled. Diameter tolerance is ±0.003″. Straightness tolerance is 0.0125″ per foot. Length tolerance is +1/8″. **To Order:** Please specify 1-, 3-, or 6-ft. length.

Also Available: Ultra-corrosion-resistant Alloy 20 stainless steel (equivalent to Carpenter 20) rods. Alloy 20 is commonly used in the chemical industry due to its resistance to aggressive environments. Hardness is Rockwell B95, yield strength is 30,000 psi, and material is annealed. Meet ASTM B473. Rods are cold finished. Nonmagnetic. Not heat treatable. Please ask for 9091K26 and specify 1/4″ to 2″ diameter and 1-, 3-, or 6-ft. length.

***Warning!* Hardness and yield strength are not guaranteed and are intended only as a basis for comparison.**

For information about stainless steel, see page 3685.

For information on the chemical composition of stainless steel alloys, as well as physical and mechanical properties, go to mcmaster.com and search for **8984KAC**.

Easy-to-Machine Stainless Steel (Type 303)

Commonly used for screw machine products, Type 303 stainless steel has good machinability due to the addition of sulfur and phosphorus. It's a low-carbon chromium-nickel (austenitic) stainless steel with good corrosion resistance and temperature resistance, and it maintains corrosion resistance up to 1500°F. It may become slightly magnetic when worked and is not heat treatable.

Rectangular Bars—Unpolished (Mill) Finish

- Hardness: 262 Brinell
- Yield Strength: 30,000 to 50,000 psi
- Annealed

Meet ASTM A582. Bars are hot rolled. Straightness tolerance is not rated. Length tolerance is +1/8", –5/32" for 3" to 6" lengths, ±1/2" for 1-ft. lengths, ±1 1/2" for 3-ft. lengths, and ±3" for 6-ft. lengths.

To Order: Please specify 1-, 3-, or 6-ft. length where prices are shown.

Tight-Tolerance Rectangular Bars—Unpolished (Mill) Finish

- Hardness: 160-241 Brinell
- Yield Strength: 35,000 psi
- Annealed

Meet ASTM A484 and A582 as well as AMS5640. Bars are cold finished. Straightness tolerance is not rated. Length tolerance is ±1" for 1-ft. lengths, ±3" for 3-ft. lengths, and ±6" for 6-ft. lengths.

To Order: Please specify 1-, 3-, or 6-ft. length where prices are shown.

Easy-to-Machine Stainless Steel (Type 303) *(Material continued from previous page)*

Tight-Tolerance Rectangular Bars with Material Certification—Unpolished (Mill) Finish

- Hardness: 160-241 Brinell
- Yield Strength: 35,000 psi
- Annealed

Meet ASTM A320, A484, and A582, and AMS5640. Each comes with a traceable lot number and physical test report. Bars are cold finished. Width tolerance is ±0.006″. Straightness tolerance is 0.0125″ per foot. Length tolerance is ±1″ for 1-ft. lengths, ±3″ for 3-ft. lengths, and ±6″ for 6-ft. lengths. **To Order:** Please specify 1-, 3-, or 6-ft. length where prices are shown.

Warning! ***Hardness and yield strength are not guaranteed and are intended only as a basis for comparison.***

For information about stainless steel, see page 3685.

For information on the chemical composition of stainless steel alloys, as well as physical and mechanical properties, go to mcmaster.com and search for **8984KAC**.

Easy-to-Machine Stainless Steel (Type 303) *(Material continued from previous page)*

Commonly used for screw machine products, Type 303 stainless steel has good machinability due to the addition of sulfur and phosphorus. It's a low-carbon chromium-nickel (austenitic) stainless steel with good corrosion resistance and temperature resistance, and it maintains corrosion resistance up to 1500° F. It may become slightly magnetic when worked and is not heat treatable.

Tight-Tolerance Rods—Precision Ground Finish

- Hardness: 190-220 Brinell
- Yield Strength: Not rated
- Annealed

Meet ASTM A314, A581, and A582, MIL-S-52283, MIL-S-862, and AMS5640. Rods are cold finished. Diameter tolerance is –0.0005″. Straightness tolerance is 1/16″ per foot. Length tolerance is ±1″ for 1-ft. lengths, ±3″ for 3-ft. lengths, and ±6″ for 6-ft. lengths. **To Order:** Please specify 1-, 3-, or 6-ft. length where prices are shown.

Super-Tight-Tolerance Rods with Material Certification—Precision Ground Finish

- Hardness: 160 Brinell
- Yield Strength: 35,000 psi
- Annealed

Meet ASTM A314, A581, and A582, and AMS5640. Each comes with a traceable lot number and physical test report. Rods are cold finished. Diameter tolerance is –0.0002″. Straightness tolerance is 0.006″ per foot. Length tolerance is ±1″. Sold in 6-ft. lengths.

Hexagonal Bars—Unpolished (Mill) Finish

- Hardness: 262 Brinell
- Yield Strength: 35,000 psi
- Annealed

Meet ASTM A484 and A582 as well as AMS5640. Bars are cold finished. Hex size is measured across the flats. Straightness tolerance is 1/16″ per 5 feet. Length tolerance is ±1″ for 1-ft. lengths, ±3″ for 3-ft. lengths, and ±6″ for 6-ft. lengths.

To Order: Please specify 1-, 3-, or 6-ft. length where prices are shown.

Wear-Resistant Easy-to-Machine Stainless Steel (Type 416)

A chromium alloy (martensitic) stainless steel, Type 416 can be heat treated for increased hardness and wear resistance. It offers better machinability than Type 410 due to the addition of sulfur and is commonly used for rivets and screws. Type 416 is magnetic and maintains corrosion resistance up to 400° F.

Sheets—Unpolished (Mill) Finish

- Hardness: 143 Brinell
- Yield Strength: 37,000 psi
- Annealed

Meet ASTM A895. Sheets are hot rolled. Can be heat treated to a maximum attainable hardness of Rockwell C42. Width and length tolerances are ±1/8″. Flatness tolerance is not rated.

Thick.	Thick. Tolerance		12″×12″		12″×24″

High-Temperature Stainless Steel (Type 309)

Excellent temperature resistance makes Type 309 a good alternative to Type 304 with similar composition. Commonly used in heat exchangers and furnace parts, Type 309 is a low carbon chromium-nickel (austenitic) stainless steel with good corrosion resistance. It maintains corrosion resistance up to 1470° F. When worked, it may become slightly magnetic. Not heat treatable.

Rectangular Bars—Unpolished (Mill) Finish

- Hardness: 167-217 Brinell
- Yield Strength: 35,000 psi
- Annealed

Meet ASTM A240. Bars are hot rolled. Width and length tolerances are ±1/16″ for ¼″ to ½″ thick bars and +⅛″ for ⅝″ to 1″ thick bars unless noted. Flatness tolerance is ¼″ per 3 feet.

To Order: Please specify 1-, 3-, or 6-ft. length.

High-Strength Corrosion-Resistant Stainless Steel (Type 2205)

This duplex (austenitic-ferritic) stainless steel has high strength and good resistance to corrosion caused by stress. Type 2205 maintains corrosion resistance up to 600° F and is commonly used for heat exchangers and oil and gas industry equipment. Magnetic. Not heat treatable.

Sheets—Unpolished (Mill) Finish

• Hardness: Rockwell C31 • Yield Strength: 65,000 psi • Annealed

Meet ASTM A240 and A923. Sheets up to 0.135″ thick are cold finished; sheets 0.1875″ thick and thicker are hot rolled. Width and length tolerances are +1/8″, –1/16″. Flatness tolerance is not rated.

High-Strength Corrosion-Resistant Stainless Steel (Type 2205)

(Material continued from previous page)

Rods—Unpolished (Mill) Finish

- Hardness: 290 Brinell
- Yield Strength: 65,000 psi
- Annealed

Meet ASTM A182 and A276. Rods are cold finished. Straightness tolerance is 1/16″. Length tolerance is ±1″ for 1-ft. lengths, ±3″ for 3-ft. lengths, and ±6″ for 6-ft. lengths. **To Order:** Please specify 1-, 3-, or 6-ft. length where prices are shown.

Wear-Resistant Stainless Steel (Type 410)

Heat treatable for extra hardness and improved wear resistance, Type 410 stainless steel is commonly used for fasteners, machine parts, and shafts. It's a chromium alloy (martensitic) stainless steel and maintains corrosion resistance up to 1200° F. Magnetic.

Tight-Tolerance Flat Stock—Precision Ground Finish

- Hardness: 217 Brinell
- Yield Strength: 30,000 psi
- Annealed

Meet ASTM A240. Flat stock is hot rolled and can be heat treated to a maximum attainable hardness of Rockwell C41-C43. Width tolerance is +0.005″. Flatness tolerance is 0.001″ per inch. Length tolerance is +1/2″. Sold in 2-ft. lengths.

For information about stainless steel, see page 3685.

For information on the chemical composition of stainless steel alloys, as well as physical and mechanical properties, go to mcmaster.com and search for **8984KAC**.

Wear-Resistant Stainless Steel (Type 410) *(Material continued from previous page)*

Heat treatable for extra hardness and improved wear resistance, Type 410 stainless steel is commonly used for fasteners, machine parts, and shafts. It's a chromium alloy (martensitic) stainless steel and maintains corrosion resistance up to 1200° F. Magnetic.

Sheets—Unpolished (Mill) Finish

• Hardness: 183 Brinell • Yield Strength: 30,000 psi • Annealed

Meet ASTM A240 and AMS5504. Sheets up to 0.090″ thick are cold finished; 0.1875″ to 1.000″ thick sheets are hot rolled. Can be heat treated to a maximum attainable hardness of Rockwell C35-C45. Width and length tolerances are +⅛″, –1/16″. Flatness tolerance is not rated.

Ultra-Hard Wear-Resistant Stainless Steel (Type 440C)

Ideal for use in bearings, valve parts, and knife blades, this high-carbon stainless steel offers good wear resistance and is one of the hardest stainless steels when heat treated. It maintains corrosion resistance up to 800° F. Magnetic.

Rectangular Bars—Unpolished (Mill) Finish

• Hardness: 225 Brinell • Yield Strength: 65,000 psi • Annealed

Meet ASTM A276 and AMS5630. Bars are hot rolled and can be heat treated to a maximum attainable hardness of Rockwell C58. Flatness tolerance is not rated. Length tolerance is ±1″ for 1-ft. lengths, ±3″ for 3-ft. lengths, and ±6″ for 6-ft. lengths. **To Order:** Please specify 1-, 3-, or 6-ft. length where prices are shown.

Rods—Unpolished (Mill) Finish

- Hardness: 230 Brinell
- Yield Strength: 65,000 psi
- Annealed

Meet ASTM A276 and AMS5630. Diameters up to 2″ are cold finished; 2 1/8″ to 5″ diameters are hot rolled. All rods can be heat treated to a maximum attainable hardness of Rockwell C60. Straightness tolerance is 0.15″ per 6 feet for 1/4″ to 2″ diameters and 0.075″ per 6 feet for 2 1/8″ to 5″ diameters. Length tolerance is +1/8″ for 1″ and 3″ lengths, ±1″ for 1-ft. lengths, ±3″ for 3-ft. lengths, and ±6″ for 6-ft. lengths. **To Order:** Please specify 1-, 3-, or 6-ft. length where prices are shown.

Ultra-Hard Wear-Resistant Stainless Steel (Type 440C) *(Material continued from previous page)*

Ideal for use in bearings, valve parts, and knife blades, this high-carbon stainless steel offers good wear resistance and is one of the hardest stainless steels when heat treated. It maintains corrosion resistance up to 800° F. Magnetic.

Hardened Rods—Precision Ground Finish

- Hardness: Rockwell C55-C60
- Yield Strength: 275,000 psi
- Hardened

Meet ASTM A276 and AMS5630. Rods are cold finished. Diameter tolerance is –0.0002″. Straightness tolerance is not rated. Length tolerance is ±1/2″. Sold in 6″ lengths.

Mold-Quality Wear-Resistant Stainless Steel (Type 420)

With its excellent polishability and high hardness, Type 420 stainless steel is ideal for manufacturing plastic molds. It is also used for knives, shafts, and surgical instruments. Type 420 is heat treatable and magnetic. It maintains corrosion resistance up to 1150° F.

Sheets—Unpolished (#2B Mill) Finish

Tough Wear-Resistant Stainless Steel (Type 440A)

This high-carbon, high-chromium martensitic stainless steel offers greater hardness than Type 420 stainless steel and greater toughness than Type 440C stainless steel while still providing good corrosion resistance. It maintains corrosion resistance up to 795° F. Often used for cutlery, valve parts, and surgical instruments.

Sheets—Unpolished (Mill) Finish

- Hardness: Rockwell C58
- Yield Strength: Not rated
- Hardened

Hollow Ball—Reflective Finish

- Hardness: Rockwell C54-60
- Yield Strength: Not rated
- Hardened

Meets AMSQQS763B. Grade is 1000. Sphericity is 0.001″. Diameter is 1″. Diameter tolerance is ±0.005″.

9327K33 ..... $9.45

Corrosion- and Wear-Resistant Stainless Steel (Type 420V)

Use Type 420V in place of tool steels, such as D2, when extra corrosion resistance is important. It offers better wear resistance than other stainless steels due to the addition of vanadium and carbon, and it has increased corrosion resistance because it's made of powdered metal. Maximum temperature for corrosion resistance is not rated. Magnetic.

Strips—Unpolished (Mill) Finish

- Hardness: 255-277 Brinell
- Yield Strength: Not rated
- Annealed

Strips are hot rolled and can be heat treated to a maximum attainable hardness of Rockwell C58-C60. Width tolerance is +3/16″. Length tolerance is +1/8″. Flatness tolerance is 0.030″.

Thick.	Thick. Tolerance	1″ × 18″		1 1/2″ × 18″		2″ × 18″	
0.140″	+0.050″	9520K12	$51.86	9520K22	$70.33	9520K32	$87.54
0.156″	+0.050″	9520K42	60.53	9520K52	83.14	9520K62	102.33

High-Strength Stainless Steel (Type 13-8 PH)

Once heat treated, this precipitation-hardenable stainless steel offers increased strength and good corrosion resistance, even under stress. It maintains corrosion resistance up to 1100° F. Magnetic.

Rods—Unpolished (Mill) Finish

- Hardness: 363 Brinell
- Yield Strength: Not rated
- Annealed

Meet AMS5629. Rods are cold finished. Not rated for maximum attainable Rockwell hardness. Diameter tolerance is ±0.0025″. Straightness tolerance is 0.0125″ per foot. Length tolerance is ±1″ for 1-ft. lengths and ±3″ for 3-ft. lengths and 6-ft. lengths. **To Order:** Please specify 1-, 3-, or 6-ft. length.

Dia.		1 ft.	3 ft.	6 ft.

1″	3667T24	209.04	485.26	746.56

Wear-Resistant High-Strength Stainless Steel (Type 15-5 PH)

Commonly used in gears, cams, and aircraft parts, Type 15-5 PH combines high strength and wear resistance. It can be heat treated at low temperatures to increase its mechanical properties. It maintains corrosion resistance up to 1100° F. Magnetic.

Rods—Unpolished (Mill) Finish

- Hardness: 332 Brinell
- Yield Strength: 145,000 psi
- Annealed

Meet ASTM A564 as well as AMS2300 and AMS5659. Rods are cold finished. Not rated for maximum attainable Rockwell hardness. Straightness tolerance is 0.075″. Length tolerance is ±1″ per foot. **To Order:** Please specify 1-, 3-, or 6-ft. length.

Warning! ***Hardness and yield strength are not guaranteed and are intended only as a basis for comparison.***

For information about stainless steel, see page 3685.

For information on the chemical composition of stainless steel alloys, as well as physical and mechanical properties, go to mcmaster.com and search for **8984KAC**.

Corrosion-Resistant High-Strength Stainless Steel (Type 17-4 PH)

Not only does Type 17-4 PH stainless steel have high strength but it also offers better corrosion resistance than Type 15-5 PH due to its slightly higher chromium content. It's also known as Type 630 stainless steel and can be strengthened by precipitation hardening at low temperatures to increase mechanical properties. It maintains corrosion resistance up to 1100° F. Magnetic.

Rectangular Bars—Unpolished (Mill) Finish

- Hardness: 353 Brinell
- Yield Strength: 110,000 psi
- Annealed

Meet ASTM A564 and AMS5643. Bars are hot rolled and can be heat treated to a maximum attainable hardness of Rockwell C47-C48. Flatness tolerance is not rated. Length tolerance is ±1″ for 1-ft. lengths, ±3″ for 3-ft. lengths, and ±6″ for 6-ft. lengths. **To Order:** Please specify 1-, 3-, or 6-ft. length.

Corrosion-Resistant High-Strength Stainless Steel (Type 17-4 PH)

(Material continued from previous page)

Rods—Unpolished (Mill) Finish

- Hardness: 341-363 Brinell
- Yield Strength: Not rated, except 1/2″ and 1″ lengths, which are 110,000 psi
- Annealed

Meet ASTM A564 and AMS5643. Diameters up to 3 1/2″ are cold finished; 4″ to 6″ diameters are hot rolled. Rods can be heat treated to a maximum attainable hardness of Rockwell C45-C48. Straightness tolerance is not rated. Length tolerance is ±1/16″ for 1/2″ and 1″ lengths, ±1/2″ for 1-ft. lengths, ±1 1/2″ for 3-ft. lengths, and ±3″ for 6-ft. lengths. **To Order:** Please specify 1-, 3-, or 6-ft. length where prices are shown.

For information about the physical and mechanical properties of tungsten, as well as machining data, go to mcmaster.com and search for **8788AAC**.

Tungsten Carbide

Commonly called carbide, tungsten carbide offers excellent corrosion resistance. Use it to machine tools that are harder and longer lasting than those made from tool steel.

Tight-Tolerance Rods—Precision Ground Finish

Notched at Both Ends

- Hardness: Rockwell A92
- Yield Strength: Not rated
- Pressure formed (sintered)

Rods are C2 tungsten carbide (10% cobalt). ***Inch Sizes—*** Diameter tolerance is –0.0003″ for rods up to 4½″ long; –0.0005″ for 6″ and 12″ lengths. Length tolerance is ±0.06″, except 12″ lengths have a plus tolerance. Straightness tolerance is not rated. ***Metric Sizes—*** Diameter tolerance is –0.007 mm and length tolerance is ±1.5 mm. Straightness tolerance is not rated.

High-Strength Durable Tungsten

The addition of copper and nickel to tungsten creates a rigid, strong material that is great as a weight or counterbalance. Fabricate tools from this high-density chatter-free tungsten to dampen noise and vibration while machining.

Rods—Ground Finish

- Hardness: Rockwell C24
- Yield Strength: 80,000 psi
- Pressure formed (sintered)

Meet ASTM B777. Rods have a plus length tolerance, and straightness tolerance is not rated.

High-Strength Nickel (Alloy 625)

Nickel, chromium, and molybdenum form this high-strength alloy that provides excellent corrosion resistance and weldability. Material is also known as Inconel 625 and Haynes 625.

Sheets—Unpolished Mill Finish (Cold Finished)

- Hardness: 145-241 Brinell
- Yield Strength: 60,000 psi
- Annealed

Meet ASTM B443 and AMS 5599. Thickness tolerance is ±0.005″. Width and length tolerances are ±1/16″. Flatness tolerance is not rated.

Ultra-Corrosion-Resistant Titanium (Grade 2)

Commercially pure with 98.9% titanium content, Grade 2 titanium offers the best combination of strength, formability, and weldability of our titanium offering. Durable and corrosion resistant, it's approximately 40% lighter than steel with a high strength-to-weight ratio.

Rectangular Bars—Unpolished Mill Finish (Hot Rolled)

- Hardness: Rockwell B68-B80
- Yield Strength: 40,000 psi
- Annealed

Meet ASTM B265. Width and length tolerances are +1/8″. Straightness tolerance is not rated. **To Order:** Please specify length.

Also Available: Rectangular bars with material certification in sizes shown below. Each comes with a traceable lot number and physical test report. Please ask for 9139K78 and specify thickness, width, and length.

About Copper, Brass, and Bronze

Often referred to as red metals, copper, brass, and bronze are materials composed mainly of copper. They are excellent conductors of electricity and heat, plus they're corrosion resistant and easily shaped and joined by soldering and brazing. An alloy is called ***copper*** when it has a minimum copper content of 99.3%. ***Brass*** is a copper alloy in which zinc is the main alloying element. ***Bronze*** is a copper alloy with a main alloying element other than zinc or nickel.

Copper, brass, and bronze are either worked into a specific shape (typically called wrought) or cast into shape. A product may also be additionally worked or heat treated for strength and hardness. The ***temper*** of a product indicates its final condition after any working or heat treating. Products that are worked will have a temper ranging from soft to full-hard, designated with an "H". Cast products will not have an "H" temper since they're not very formable, though some cast products can be heat treated.

Hardness

The hardness of a material is its resistance to another material penetrating its surface. Harder materials have more wear resistance, but they're also more brittle. *Note:* Alloy 122 is not rated.

Yield Strength

The yield strength is the point at which metal bends and will not return to its original shape. At this point the material has changed shape permanently, but does not break. *Note:* Alloys 122 and 385 are not rated.

Weldability

Excellent— Superior performance for all commercial procedures and methods.
Good— Weldable by all commercial procedures and methods.
Fair— May require special techniques or testing to develop procedures.

Note: Alloys 145, 630, 642, and SAE 841 are not rated for TIG/MIG welding. Alloys 863, 903, 954, and SAE 841 are not rated for spot welding.

Welding Type	Excellent	Good	Fair	Not Recommended
TIG/MIG	122	101, 260, 655	220, 316, 464, 510, 903, 954	110, 182, 330, 353, 360, 385, 485, 544, 863, 932, 936
Arc		220, 510, 630, 655, 863, 954	101, 145, 260, 316, 330, 464, 642, 903	110, 122, 182, 353, 360, 385, 485, 544, 932, 936, SAE 841
Spot	655	260, 630	330, 464, 510, 642	101, 110, 122, 145, 182, 220, 316, 353, 360, 385, 485, 544, 932, 936

Electrical Conductivity

Copper alloys are known for their excellent electrical conductivity. Ratings for electrical conductivity use Alloy 101 as the standard. *Note:* SAE 841 is not rated.

Excellent	Good	Fair	Poor
101, 110, 145	182	122, 220, 260, 316	330, 353, 360, 385, 464, 485, 510, 544, 630, 642, 655, 863, 903, 932, 936, 954

Forming and Working

Forming and working indicate the extent to which a material won't crack when bent without applying heat.

Excellent	Good	Fair	Poor
101, 110, 122, 182, 220, 260, 330, 510	145, 316, 544	353, 464, 936	360, 385, 485, 630, 642, 655, 863, 903, 932, 954, SAE 841

Machinability

Machinable alloys can be cut, drilled, pressed, punched, turned, shaved, reamed, tapped, threaded, or otherwise machined.

Excellent— Ideal for machining. When cut, they don't require extensive post-machining cleaning. Produce very small chips.
Good— These alloys will have a good to excellent finish after machining and will produce curled or easily broken chips.
Fair— Have a satisfactory post-machining finish and will produce continuous chips.
Poor— Difficult to get satisfactory finish after machining.

Excellent	Good	Fair	Poor
145, 353, 360, 385	316, 485, 544, 642, 655, 932, 936, 954, SAE 841	110, 260, 330, 464, 510, 630	101, 122, 182, 220, 863, 903

Warning! ***Hardness and yield strength are not guaranteed and are intended only as a basis for comparison.***

For information about copper, see page 3714.

For information about the chemical composition of copper alloys, as well as physical and mechanical properties, go to mcmaster.com and search for **8964KAC.**

Multipurpose Copper (Alloy 110)

With a minimum copper content of 99.9%, Alloy 110 has the characteristics for which copper is typically known: good electrical conductivity and corrosion resistance, as well as high formability. Also known as electronic grade, it is ideal for use in electrical applications such as bus bars, connectors, and gaskets. Not heat treatable.

Rectangular Bars—Unpolished (Mill) Finish

- Hardness: Rockwell F65-F80
- Yield Strength: 44,000 psi
- Temper: Hard (H04)

Meet ASTM B187. Straightness tolerance is ½″. Length tolerance is ±¼″.
To Order: Please specify 1-, 3-, or 6-ft. length where prices are shown.

Rectangular Bars with Rounded Edges—Silver-Plated Finish

- Hardness: Rockwell F65-F80
- Yield Strength: Not rated
- Temper: Hard (H04)

Meet ASTM B187. Compared to the unpolished finish bars above, these silver-plated rectangular bars are slower to tarnish and have low electrical resistance at contact points. Plating thickness is 0.0000015″-0.000003″. Straightness tolerance is ¼″. Length tolerance is ±½″. **To Order:** Please specify 1-, 3-, or 6-ft. length.

Sheets—Polished Finish

Brushed (#4 Satin) Finish

Mirror-Like (#8) Finish

- Hardness: Rockwell B25
- Yield Strength: 30,000 psi
- Temper: ¼ Hard (H01) to ½ Hard (H02)

Meet ASTM B152. Width and length tolerances are ±1/32″. Flatness tolerance is ⅛″. The polished side has a peel-off protective masking.

Brushed (#4 Satin) Finish— Polished to a fine brushed finish on one side with grain lines in one direction.

Mirror-Like (#8) Finish— Polished to a mirror-like finish on one side with no grain lines.

Finish Selector Pack— Contains one individually marked piece each of unpolished (mill), brushed (#4 satin), and mirror-like (#8) finishes. Each piece is approximately 1½″×3″×1/32″ thick.

1127T15 ..... **Per Pkg.** $22.96

(Material continued on following page)

Warning! ***Hardness and yield strength are not guaranteed and are intended only as a basis for comparison.***

For information about copper, see page 3714.

For information about the chemical composition of copper alloys, as well as physical and mechanical properties, go to mcmaster.com and search for **8964KAC**.

Multipurpose Copper (Alloy 110) *(Material continued from previous page)*

With a minimum copper content of 99.9%, Alloy 110 has the characteristics for which copper is typically known: good electrical conductivity and corrosion resistance, as well as high formability. Also known as electronic grade, it is ideal for use in electrical applications such as bus bars, connectors, and gaskets. Not heat treatable.

Soft Sheets—Unpolished (Mill) Finish

- Hardness: Rockwell F40-F84
- Yield Strength: For sheets up to 0.187″ thick, 10,000 to 28,000 psi; for sheets 0.250″ thick and thicker, not rated
- Temper: For sheets up to 0.187″ thick, Soft (annealed) to ⅛ Hard (H00); for sheets 0.250″ thick and thicker, ⅛ Hard (H00) to ¼ Hard (H01)

The 0.016″ to 0.062″ thick sheets meet ASTM B370; all others meet ASTM B152. Width and length tolerances are ±¼″. Flatness tolerance is not rated.

Ultra-Conductive Copper (Alloy 101)

Also known as oxygen-free high-conductivity (OFHC) or oxygen-free electronic (OFE) copper, this ultra-pure (99.99%) copper is good for high-temperature applications such as terminal lugs and wire connectors. It can be welded and brazed. Not heat treatable.

Rectangular Bars—Unpolished (Mill) Finish

- Hardness: Rockwell F80
- Yield Strength: 45,000 psi
- Temper: Hard (H04)

Meet ASTM B187. Width tolerance is ±0.015″ for 1″ and 2″ sizes and ±0.030″ for 4″ and 6″ sizes. Straightness tolerance is ¼″. Length tolerance is ±¼″.

Soft Sheets—Unpolished (Mill) Finish

- Hardness: Rockwell F30-F75
- Yield Strength: 10,000 psi
- Temper: Soft (Annealed)

Meet ASTM F68. Width and length tolerances are ±1/16″. Flatness tolerance is not rated.

Thick.	Thick. Tolerance	12″×12″	Each	12″×36″	Each	Thick.	Thick. Tolerance	12″×12″	Each	12″×36″	Each

Tubes—Unpolished (Mill) Finish

- Hardness: Rockwell B60
- Yield Strength: 50,000 psi
- Temper: As drawn (H58)

Meet ASTM B75 and F68. OD tolerance is ±0.0025″. Straightness tolerance is 3/16″. Length tolerance is ±1/16″. Sold in 6-ft. lengths.

OD	ID	Each	OD	ID	Each	OD	ID	Each

Rods—Unpolished (Mill) Finish

- Hardness: Rockwell F84-F94, except 6″ dia. rods have a hardness of Rockwell F42
- Yield Strength: 40,000 to 50,000 psi
- Temper: Hard (H04)

Meet ASTM B187. The 1″ to 6″ long rods also meet ASTM F68. Straightness tolerance is ½″, except 1″ to 6″ lengths are not rated. Length tolerance is +1/16″ for 1″ to 6″ lengths, ±⅛″ for 1-ft. lengths, ±¼″ for 3-ft. lengths, and ±½″ for 6-ft. lengths. **To Order:** Please specify 1-, 3-, or 6-ft. length where prices are shown.

Balls—Reflective Finish

- Hardness: Not rated
- Yield Strength: Not rated
- Temper: Hard

Made of Alloy 102, which is 99.95% pure copper, making it slightly less conductive than Alloy 101. Meet ASTM B2 and B3. Diameter tolerance is ±0.001″. Grade is 200. Sphericity is 0.0002″.

Warning! ***Hardness and yield strength are not guaranteed and are intended only as a basis for comparison.***

For information about copper, see page 3714.

For information about the chemical composition of copper alloys, as well as physical and mechanical properties, go to mcmaster.com and search for **8964KAC**.

Weldable Copper (Alloy 122)

This electrically conductive copper is great for use in TIG/MIG welding and also offers excellent formability. Commonly used for plumbing pipe and tube, and water, gasoline, and oil lines. Not heat treatable.

Tubes—Unpolished (Mill) Finish

- Hardness: Not rated
- Yield Strength: Not rated
- Temper: ½ Hard (H02) to ¾ Hard (H03)

Meet ASTM B251. Create telescoping tubes by fitting a tube inside one that is the next larger size. OD tolerance is ±0.002″. Wall thickness tolerance is ±0.001″. Straightness tolerance is not rated. Length tolerance is ±1/32″.

Machinable Copper (Alloy 145)

Also known as tellurium copper, Alloy 145 offers good machinability, making it a great choice for creating high-speed screw machine products requiring conductivity and corrosion resistance. Not heat treatable.

Rectangular Bars—Unpolished (Mill) Finish

- Hardness: Not rated
- Yield Strength: 33,000 to 42,000 psi
- Temper: Hard (H04)

Meet ASTM B301. Width tolerance is ±0.012″ for 4″ size and ±0.018″ for 6″ size. Straightness tolerance is not rated. Length tolerance is ±¼″. **To Order:** Please specify 3- or 6-ft. length.

High-Strength Copper (Alloy 182)

Also known as RWMA Class 2 chromium copper, this chromium-copper alloy is stronger, harder, and more wear resistant than pure copper. It is difficult to machine. Commonly used in mold making, cable shields, and welding electrodes. Can be heat treated.

Rectangular Bars—Unpolished (Mill) Finish

- Hardness: Rockwell B60-B70
- Yield Strength: 48,000 to 65,000 psi
- Temper: Hard

Width tolerance is ±0.005″ for ⅛″ to ½″ sizes and ±0.009″ for ¾″ to 2″ sizes. Straightness tolerance is not rated. Length tolerance is +⅛″. **To Order:** Please specify 1-, 3-, or 6-ft. length.

1 1/4″	89985K957	94.18	235.45	392.42

Ultra-Machinable Brass (Alloy 360)

The standard by which copper, brass, and bronze machinability is measured, Alloy 360 is also known as free-machining brass. Its lead content prevents successful welding but does provide lubrication to enable high-speed machining such as drilling, milling, and tapping with reduced tool wear and breakage. Alloy 360 is corrosion resistant and has a smooth finish that readily accepts plating. Not heat treatable.

Rectangular Bars—Unpolished (Mill) Finish

- Hardness: Not rated
- Yield Strength: 15,000 to 25,000 psi
- Temper: 1/2 Hard (H02)

Meet ASTM B16. Straightness tolerance is not rated. Length tolerance is ±1/2″ for 1- and 3-ft. lengths and ±3″ for 6-ft. lengths. **To Order:** Please specify 1-, 3-, or 6-ft. length where prices are shown.

Warning! ***Hardness and yield strength are not guaranteed and are intended only as a basis for comparison.***

For information about brass, see page 3714.

For information about the chemical composition of brass alloys, as well as physical and mechanical properties, go to mcmaster.com and search for **8964KAC**.

Ultra-Machinable Brass (Alloy 360) *(Material continued from previous page)*

The standard by which copper, brass, and bronze machinability is measured, Alloy 360 is also known as free-machining brass. Its lead content prevents successful welding but does provide lubrication to enable high-speed machining such as drilling, milling, and tapping with reduced tool wear and breakage. Alloy 360 is corrosion resistant and has a smooth finish that readily accepts plating. Not heat treatable.

Rectangular Bars with Material Certification—Unpolished (Mill) Finish

- Hardness: Not rated
- Yield Strength: 15,000 to 25,000 psi
- Temper: ½ Hard (H02)

Meet ASTM B16. Each comes with a traceable lot number and physical test report. Width tolerance is ±0.005″ for ½″ to 1″ sizes and ±0.008″ for 1½″ and 2″ sizes. Straightness tolerance is not rated. Length tolerance is ±3″. Sold in 6-ft. lengths.

Width		Each
⅛″ Thick *(±0.0045″)*		
1″	**2569T31**	$56.55

Hexagonal Bars—Unpolished (Mill) Finish

- Hardness: Rockwell B75-B80
- Yield Strength: 44,000 to 52,000 psi
- Temper: ½ Hard (H02)

Meet ASTM B16. Hex size is measured across the flats. Straightness tolerance is not rated. Length tolerance is ±½″. **To Order:** Please specify 1-, 3-, or 6-ft. length where prices are shown.

Tight-Tolerance Rods—Precision Ground Finish

- Hardness: Rockwell B86
- Yield Strength: Not rated
- Temper: Not rated

Meet ASTM B16 and B249. Diameter tolerance is ±0.0002″. Straightness tolerance is not rated. Length tolerance is ±½″. Sold in 6-ft. lengths.

Dia.		Each
⅛″	**2575T11**	$57.64

1″	**2575T18**	339.71

Warning! ***Hardness and yield strength are not guaranteed and are intended only as a basis for comparison.***

For information about brass, see page 3714.

For information about the chemical composition of brass alloys, as well as physical and mechanical properties, go to mcmaster.com and search for **8964KAC**.

Ultra-Machinable Brass (Alloy 353)

Commonly called engraver's brass, Alloy 353 has machinability approaching that of Alloy 360 with a lower lead content. Well suited for forming applications such as knurling and threading, it's often used for nuts, gears, and wheels. It has fair corrosion resistance and is not heat treatable.

Sheets—Unpolished (Mill) Finish

- Hardness: Rockwell B70
- Yield Strength: 50,000 psi
- Temper: ½ Hard (H02)

Meet ASTM B121. Width and length tolerances are ±¼″. Flatness tolerance is not rated.

Ultra-Machinable Brass (Alloy 385)

Also known as architectural brass, Alloy 385 is easy to machine, with nearly the same machinability as Alloy 360. It is typically used in thresholds and ornamental trim such as hinges and lock bodies. Not heat treatable.

Rectangular Bars—Unpolished (Mill) Finish

- Hardness: Not rated
- Yield Strength: Not rated
- Temper: ½ Hard (H02)

Meet ASTM B455. Width tolerance is ±0.015″ for ¼″ to 1½″ sizes and ±0.025″ for 2″ to 4″ sizes. Straightness tolerance is not rated. Length tolerance is ±1″ for 2-ft. lengths, ±3″ for 4-ft. lengths, and ±6″ for 8-ft. lengths. **To Order:** Please specify 2-, 4-, or 8-ft. length.

Formable Brass (Alloy 260)

This simple copper-zinc alloy offers the best formability of all the brasses, as well as good corrosion resistance and machinability. The standard for use in electrical connectors, it's commonly used for clips, lamp sockets, springs, rivets, eyelets, and wire screens. Not heat treatable.

Strips—Unpolished (Mill) Finish

- Hardness: Rockwell B60-B77
- Yield Strength: 52,000 psi
- Temper: ½ Hard (H02)

Meet ASTM B36. Width tolerance is ±1/16″. Thickness tolerance is ±0.0035″ for 0.020″ to 0.080″ sizes and ±0.006″ for 0.093″ to 0.188″ sizes. Flatness tolerance is not rated. Length tolerance is ±½″.

Formable Brass (Alloy 260) *(Material continued from previous page)*

Sheets—Polished Finish

Brushed (#4 Satin) Finish *Mirror-Like (#8) Finish*

- Hardness: Rockwell B55
- Yield Strength: 40,000 psi
- Temper: ¼ Hard (H01) to ½ Hard (H02)

Meet ASTM B36. Width and length tolerances are ±1/32″. Flatness tolerance is ⅛″. The polished side has a peel-off protective masking.

Brushed (#4 Satin) Finish—Polished to a fine brushed finish on one side with grain lines in one direction.

Mirror-Like (#8) Finish—Polished to a mirror-like finish on one side with no grain lines.

Finish Selector Pack—Contains one individually marked piece each of unpolished (mill), brushed (#4 satin), and mirror-like (#8) finishes. Each piece is approximately 1½″×3″×1/32″ thick.

1219T11 ..... **Per Pkg.** $24.49

***Warning!* Hardness and yield strength are not guaranteed and are intended only as a basis for comparison.**

For information about the chemical composition of brass alloys, as well as physical and mechanical properties, go to mcmaster.com and search for **8964KAC**.

Formable Brass (Alloy 260) *(Material continued from previous page)*

This simple copper-zinc alloy offers the best formability of all the brasses as well as good corrosion resistance and machinability. The standard for use in electrical connectors, it's commonly used for clips, lamp sockets, springs, rivets, eyelets, and wire screens. Not heat treatable.

Miniature Round Tubes—Unpolished (Mill) Finish

- Hardness: Not rated
- Yield Strength: Not rated
- Temper: ½ Hard (H02)

Meet ASTM B135. Create telescoping tubes by fitting a tube inside one that is the next larger size. OD tolerance is ±0.002″. Straightness tolerance is not rated. Length tolerance is ±1/32″.

Machinable and Formable Brass (Alloy 330)

A low lead content makes this yellow brass an ideal choice when you need both machinability and formability. It's also good for soldering and brazing applications and can be used in mildly corrosive environments. Not heat treatable.

Tubes—Unpolished (Mill) Finish

- Hardness: Rockwell 30T 70
- Yield Strength: 60,000 psi
- Temper: Hard drawn

Meets ASTM B135. OD tolerance is ±0.003″, except for the 2½″ size, which is ±0.005″. Length tolerance is ±¼″ for 3-ft. lengths and ±½″ for 6-ft. lengths. Straightness tolerance is not rated. **To Order:** Please specify 3- or 6-ft. length.

For information about the chemical composition of brass alloys, as well as physical and mechanical properties, go to mcmaster.com and search for **8964KAC**.

Weldable Naval Brass (Alloy 464)

This weldable alloy offers good corrosion resistance for saltwater and steam applications, as well as improved strength thanks to a high zinc content. Alloy 464 is commonly used in marine hardware, valve stems, and propellers. Not heat treatable.

Rectangular Bars—Unpolished (Mill) Finish

- Hardness: Rockwell B65
- Yield Strength: 35,000 psi
- Temper: ½ Hard (H02)

Meet ASTM B21. Width tolerance is ±0.006″ for ½″ to 1¼″ sizes and ±0.014″ for 1½″ to 4″ sizes. Straightness tolerance is ¼″. Length tolerance is ±½″. **To Order:** Please specify 1-, 3-, or 6-ft. length.

Sheets—Polished Finish

Brushed (#4 Satin)

Mirror-Like (#8)

- Hardness: Rockwell B80
- Yield Strength: 53,000 to 58,000 psi
- Temper: ¼ Hard (H01) to ½ Hard (H02)

Meet ASTM B21. Width and length tolerances are ±1⁄32″. Flatness tolerance is ⅛″. The polished side has a peel-off protective masking.

Brushed (#4 Satin) Finish— Polished to a fine brushed finish on one side with grain lines in one direction.

Mirror-Like (#8) Finish— Polished to a mirror-like finish on one side with no grain lines.

Machinable Naval Brass (Alloy 485)

You may know this material as high-leaded naval brass—it has the strength and corrosion resistance of Alloy 464 naval brass, with the addition of lead to offer better machinability. Good for use in screw machine products, marine hardware, and valve stems. Not heat treatable.

Rods—Unpolished (Mill) Finish

- Hardness: Rockwell B60-B85, except 5⁄16″ and 7⁄16″ diameters are not rated
- Yield Strength: 25,000 to 27,000 psi
- Temper: ½ Hard (H02)

Meet ASTM B21. Diameter tolerance is ±0.0025″. Straightness tolerance is not rated. Length tolerance is ±½″ for 1- and 3-ft. lengths and ±3″ for 6-ft. lengths. **To Order:** Please specify 1-, 3-, or 6-ft. length where prices are shown.

Warning! ***Hardness and yield strength are not guaranteed and are intended only as a basis for comparison.***

For information about bronze, see page 3714.

For information about the chemical composition of bronze alloys, as well as physical and mechanical properties, go to mcmaster.com and search for **8964KAC**.

Bearing-Grade Bronze (Alloy 932)

Also known as SAE 660 and bearing bronze, this alloy is considered the workhorse of all high-leaded bronzes. Due to the addition of lead, Alloy 932 is relatively soft and is readily machined into bushings and bearings. It has a smooth finish and is nonsparking. Not heat treatable.

Oversize Rectangular Bars—Unpolished (Mill) Finish

- Hardness: 65 Brinell
- Yield Strength: 22,000 psi
- Temper: As cast (M07)

Meet ASTM B505. Thickness and width are oversized +0.078″ to +0.156″ to allow for finishing. Straightness tolerance is ½″. Length tolerance is +⅛″. **To Order:** Please specify 1- or 3-ft. length.

For information about the chemical composition of bronze alloys, as well as physical and mechanical properties, go to mcmaster.com and search for **8964KAC**.

Machinable Bearing-Grade Bronze (Alloy 936)

Also known as modified SAE 64, this alloy is often used as an alternative to Alloy 932 because it is easier to machine and has better corrosion resistance. Use it for crankshaft bearings and thrust washers, and in pump applications. Not heat treatable.

Oversize Rectangular Bars—Unpolished (Mill) Finish

- Hardness: 60-65 Brinell
- Yield Strength: 21,000 psi
- Temper: As cast

Meet ASTM B505. Thickness, width, and length are oversized +1/8″ to allow for finishing. Flatness tolerance is 1/8″. **To Order:** Please specify 1- or 3-ft. length.

Wd.		Each 1 ft.	Each 3 ft.

5″	**8917K95**	919.16

Weldable Bearing-Grade Bronze (Alloy 903)

This tin-zinc bronze is also known as Navy G metal. It has a low lead content and can be welded, unlike most bearing-grade bronze alloys. It offers good corrosion resistance, especially in saltwater applications, and is typically used for gears, fittings, and pump parts. Not heat treatable.

Rods with Material Certification—Unpolished (Mill) Finish

- Hardness: 70 Brinell
- Yield Strength: 19,500 to 22,000 psi
- Temper: As cast (M07)

Meet ASTM B505 and Fed. Spec. QQ-C-390B. Each comes with a traceable lot number and test report. Diameter tolerance is ±0.005″ for 1″ to 3 1/2″ sizes and ±0.008″ for 4″ and 4 1/2″ sizes. Straightness tolerance is 1/4″. Length tolerance is +1/8″. Sold in 12″ lengths.

Dia.		Each
1″	**9104K11**	$50.94
1 1/2″	**9104K13**	111.60
2″	**9104K15**	$184.77
2 1/2″	**9104K17**	275.84
3″	**9104K19**	$366.92
3 1/2″	**9104K21**	480.75
4″	**9104K23**	$606.06
4 1/2″	**9104K25**	728.12

High-Strength Bearing-Grade Bronze (Alloy 544)

Also known as leaded phosphor bronze, this is the best bearing-grade bronze we offer. It's one of the strongest bronze alloys and is also highly machinable. Because of its good formability and resistance to corrosion and fatigue, it's widely used for shafts, gears, washers, and valve parts. Not heat treatable.

Rods—Unpolished (Mill) Finish

- Hardness: Not rated
- Yield Strength: 60,000 to 63,000 psi
- Temper: Hard (H04)

Meet ASTM B139. Diameter tolerance is ±0.002″ for 3/16″ to 1/2″ sizes and ±0.004″ for 5/8″ to 2″ sizes. Straightness tolerance is not rated. Length tolerance is ±1/2″. **To Order:** Please specify 1-, 3-, or 6-ft. length where prices are shown.

For information about the chemical composition of bronze alloys, as well as physical and mechanical properties, go to mcmaster.com and search for **8964KAC**.

Oil-Filled Bearing-Grade Bronze (SAE 841)

Also known as oil-impregnated bronze, this alloy is infused with SAE 30 oil for continuous self-lubrication, perfect for areas where maintenance is difficult. SAE 841 is corrosion resistant, so it's great in applications such as water pumps, electrical generators, and motors. Not heat treatable.

Sheets—Unpolished (Mill) Finish

- Hardness: Not rated
- Yield Strength: 11,000 psi
- Temper: As pressed

Meet ASTM B438. Thickness tolerance is ±0.005″. Width and length are oversized to allow for finishing. Flatness tolerance is not rated.

Thick.	5″×6″	Each	6″×12″	Each

Corrosion-Resistant Bearing-Grade Bronze (Alloy 954)

Our most popular aluminum-bronze alloy, Alloy 954 offers an ideal combination of high strength and corrosion resistance. It is heat treatable and performs well in applications such as pressure-bearing surfaces where strength, hardness, and high temperature resistance are a must.

Oversize Rectangular Bars—Unpolished (Mill) Finish

- Hardness: 170 Brinell
- Yield Strength: 32,000 psi
- Temper: As cast (M07)

Meet ASTM B505. Thickness is oversized +0.067″ to +0.122″ and width is oversized +0.043″ to +0.098″ to allow for finishing. Straightness tolerance is not rated. Length tolerance is +1/4″. **To Order:** Please specify 1-, 3-, or 6-ft. length.

Corrosion-Resistant Bronze (Alloy 220)

This simple copper-zinc alloy, historically called commercial bronze, is often used for marine hardware, weatherstripping, and ornamental trim because of its finish and good corrosion resistance. It has a good combination of malleability and strength. Not heat treatable.

Sheets—Unpolished (Mill) Finish

- Hardness: Rockwell B58
- Yield Strength: 45,000 psi
- Temper: 1/2 Hard (H02)

Meet ASTM B36. Width and length tolerances are ±3/16″. Flatness tolerance is not rated.

Machinable and Corrosion-Resistant Bronze (Alloy 316)

Also known as leaded commercial bronze, Alloy 316 combines the natural corrosion resistance of Alloy 220 with the machinability of lead. Commonly used for cable clamps, pole line hardware, and screw machine products. Not heat treatable.

Rods—Unpolished (Mill) Finish

- Hardness: Not rated
- Yield Strength: 28,000 psi
- Temper: 1/2 Hard (H02)

Meet ASTM B140. Diameter tolerance is ±0.0025″. Straightness tolerance is 1/4″. Length tolerance is ±1/2″ for 1- and 3-ft. lengths and ±1/4″ for 6-ft. lengths. **To Order:** Please specify 1-, 3-, or 6-ft. length.

High-Strength Bronze (Alloy 630)

Comparable to Ampco 45, this bronze alloy contains aluminum and nickel to increase its strength without diminishing its excellent ductility, toughness, and corrosion resistance. An excellent choice for applications involving heavy loads, friction, abrasive wear, and corrosion, it's often used for bearings, hydraulic valve parts, and aircraft landing gear components. Not heat treatable.

Rods—Unpolished (Mill) Finish

- Hardness: 201-248 Brinell
- Yield Strength: 60,000 to 68,000 psi
- Temper: HR50

Meet ASTM B150. Diameter tolerance is ±0.002″ for 3/8″ and 1/2″ sizes, ±0.003″ for 5/8″ to 1″ sizes, and ±0.004″ for 1 1/4″ to 1 1/2″ sizes. Straightness tolerance is not rated. Length tolerance is ±1/4″. **To Order:** Please specify 1-, 3-, or 6-ft. length.

Dia.		Each 1 ft.	Each 3 ft.	Each 6 ft.

For information about the chemical composition of bronze alloys, as well as physical and mechanical properties, go to mcmaster.com and search for **8964KAC**.

Machinable High-Strength Bronze (Alloy 642)

The addition of aluminum gives Alloy 642 strength while maintaining its machinability. Also known as aluminum silicon bronze, it's typically used for valve bodies, gears, and bolts. Not heat treatable.

Rods—Unpolished (Mill) Finish

- Hardness: Rockwell B80-B100
- Yield Strength: 42,000 to 45,000 psi
- Temper: HR50

Meet ASTM B150. Diameter tolerance is ±0.002″ for 5/16″ to 1/2″ sizes and ±0.004″ for 5/8″ to 2″ sizes. Straightness tolerance is not rated. Length tolerance is ±1/4″. **To Order:** Please specify 1-, 3-, or 6-ft. length.

2″	89195K51	188.96	406.99	726.77

Weldable High-Strength Bronze (Alloy 655)

Commonly called high-silicon bronze, Alloy 655 contains more silicon than other bronze alloys and is suitable for all types of welding. It has good formability but is harder to machine than Alloy 642. Often used for wear plates, bearings, and hydraulic valve parts. Not heat treatable.

Rods—Unpolished (Mill) Finish

- Hardness: Rockwell B75-B100, unless noted
- Yield Strength: 38,000 to 55,000 psi
- Temper: Hard (H04)

Meet ASTM B98. Diameter tolerance is ±0.002″ for 1/4″ to 1/2″ sizes and ±0.004″ for 5/8″ to 1 1/2″ sizes. Straightness tolerance is not rated. Length tolerance is ±1/2″. **To Order:** Please specify 3- or 6-ft. length.

1 1/2″	89575K27	346.33	629.69

★ Hardness is not rated.

Corrosion-Resistant High-Strength Bronze (Alloy 863)

Also known as manganese bronze, this alloy offers corrosion resistance in addition to superior strength and hardness. Ideal for heavy duty construction applications and harsh environments. Alloy 863 is not as machinable as many of the other bronze alloys and is not heat treatable.

Oversize Rods and Tubes—Unpolished (Mill) Finish

- Hardness: Rockwell B98
- Yield Strength: 62,000 psi
- Temper: As cast (M07)

Meet ASTM B505. Straightness tolerance is 1/4″. Length tolerance is +1/8″ for 13″ and 3-ft. lengths and +1/4″ for 6-ft. lengths.
Rods—Diameter is oversized +0.0525″ to +0.0725″ to allow for finishing. **To Order:** Please specify 3- or 6-ft. length.
Tubes—OD is oversized +0.0525″ to +0.109″ and ID is undersized –0.0505″ to –0.165″ to allow for finishing. Sold in 13″ lengths.

Ultra-Strength Bronze (Alloy 510)

With high strength and excellent formability, Alloy 510 is great for parts subject to repeated stress such as springs, bellows, and contacts. It's commonly referred to as phosphor bronze. Not heat treatable.

Spring-Tempered Strips—Unpolished (Mill) Finish

- Hardness: Not rated
- Yield Strength: 80,000 psi
- Temper: Spring (H08)

Meet ASTM B103. Width tolerance is ±0.010″ for 6″ wide strips and ±0.016″ for 12″ wide strips. Flatness tolerance is not rated. Length tolerance is ±1/4″. **To Order:** Please specify 1-, 4-, or 8-ft. length.

Rods—Unpolished (Mill) Finish

- Hardness: Not rated
- Yield Strength: Not rated
- Temper: Hard (H04)

Meet ASTM B139. Diameter tolerance is ±0.002″ for 1/4″ to 1/2″ sizes and ±0.004″ for 5/8″ to 2″ sizes. Straightness tolerance is not rated. Length tolerance is ±1/4″ for 1- and 3-ft. lengths and ±6″ for 6-ft. lengths. **To Order:** Please specify 1-, 3-, or 6-ft. length.

About Wire

Bend-and-stay wire, also known as soft temper or annealed wire, is easy to bend and tends to retain its new shape once released. It is often used as tying and locking wire.

Spring-back wire, also known as spring temper wire, resists bending and tends to return to its original shape once released. It is often used to construct springs and wire rope.

The sizes above are a few of the wire diameters we offer.

Stainless Steel Wire

For a wire gauge conversion chart, go to mcmaster.com and search for **9896KAC**.

Stainless Steel Wire

Bend-and-Stay Type 304 Stainless Steel—Matte Finish

Spool

- Bend-and-stay wire (soft temper)
- Meets ASTM A580 and A555, unless noted

Our most popular wire, this general-purpose pliable wire has good corrosion resistance. Diameter tolerance is ±0.0005″ for diameters up to 0.032″; ±0.001″ for diameters 0.038″ and larger. Maximum temperature is 550° F, unless noted.

Bend-and-Stay Type 316L Stainless Steel

- Bend-and-stay wire (soft temper)
- Meets ASTM A580

This low-carbon version of Type 316 stainless steel is more corrosion resistant than Type 304. Diameter tolerance is ±0.001″. Maximum temperature is 400° F. Wire has a bright finish, except wire diameters 0.064″ and larger have a matte finish.

Slippery PTFE-Coated Stainless Steel Wire

- Spring-back wire (spring temper)
- Meets ASTM A313

The PTFE coating provides a slippery surface that eases wire threading. Material is Type 304 stainless steel. Wire diameter includes coating and has a ±0.0005″ tolerance. Wire is sold in 70″ straight lengths that have a length tolerance of ±3″. Maximum temperature is 500° F. Color is green.

For information about wire temper and wire diameters, see page 3731.

For a wire gauge conversion chart, go to mcmaster.com and search for **9896KAC**.

Flat Stainless Steel Wire

- Bend-and-stay wire (soft temper)

The flat wire's surfaces help prevent rolling and slipping and provide a tight, secure wrap around pipes, rods, and other round surfaces. Wire material is Type 304 stainless steel. Thickness and width tolerances are ±0.001″. Maximum temperature is 550° F. Finish is matte.

Steel Wire

1008 Carbon Steel—Zinc Galvanized

Spool

- Bend-and-stay wire (soft temper)
- Meets ASTM A641, unless noted

The zinc coating provides better corrosion resistance than black oxide. Diameter tolerance is ±0.003″. Maximum temperature is 300° F. ***1-ft. lengths*** are sold in packages of 50.

Also Available: 0.063″ to 0.135″ diameter wire in 100-lb. coils. Please ask for 8855K886 and specify diameter.

1008 Carbon Steel—PVC Coated

- Bend-and-stay wire (soft temper)
- Meets ASTM A853

The PVC coating is yellow and provides rust resistance. Wire can be used outdoors. Wire diameter does not include the coating. Coating thickness is a minimum of 7 mils. Diameter tolerance is ±0.002″. Maximum temperature is 375° F.

Wire Dia.	Ft./Coil	3-lb. Coil	
0.062″	245	8867K25	$11.85

1065 Carbon Steel—Matte Finish (Oil Coated)

- Spring-back wire (spring temper)
- Meets ASTM A229

Meets MIL-W-21425B Type 1. Diameter tolerance is ±0.002″, and length tolerance is +1″. Max. temp. is 250° F. Color is black.

Copper Wire

- Bend-and-stay wire (soft temper)
- Meets ASTM B3

Useful for grounding applications, this Alloy 110 (99.9% copper) wire has excellent electrical conductivity. Diameter tolerance is ±0.0003″ for 0.003″ to 0.032″ wire diameters; ±0.0006″ for 0.040″ to 0.064″ wire diameters. Maximum temperature is not rated.

Tin-Coated wire is easy to solder. The corrosion-resistant coating slows oxidation.

Easy-to-Form Brass Wire

- Bend-and-stay wire (soft temper)
- Meets ASTM B134

Made of Alloy 260 brass, the most formable copper alloy, this wire also offers good electrical conductivity. Dia. tolerance is ±0.0005″, except 0.051″ and 0.064″ diameters are ±0.0008″. Maximum temperature is 400° F. Finish is matte, except 0.020″ and 0.025″ diameters have a bright finish.

High-Strength Bronze Wire

- Spring-back wire (spring temper)
- Meets ASTM B159

Ideal for constructing springs, this wire is made of Alloy 510 phosphor bronze. Diameter tolerance is ±0.001″. Maximum temperature is 250° F. Wire has a bright finish.

Lightweight Aluminum Wire

Spool

- Bend-and-stay wire (soft temper)
- Meets ASTM B211

This Alloy 1100 aluminum wire is lightweight and corrosion resistant and offers good electrical conductivity. Diameter tolerance is ±0.002″. Max. temp. is 200° F. Finish is matte.
Also Available: 0.080″, 0.114″, and 0.125″ diameter wire in 12-lb. coils. To order, please ask for 8866K887 and specify diameter.

High-Temperature Nickel Wire

Nickel wire withstands high temperatures and is corrosion resistant.

Alloy 400 Nickel—Matte Finish

Spool

- Bend-and-stay wire (soft temper)
- Meets ASTM B164

Made from Alloy 400, also known as Monel 400, this wire can be used as safety lock wire. Diameter tolerance is ±0.0005″, except diameters 0.032″ and larger are ±0.001″. Maximum temperature is 700° F.

Alloy 600 Nickel—Matte Finish

Can

- Bend-and-stay wire (soft temper)
- *Silver Finish:* Meets ASTM B166
  Charcoal Finish: Meets AMS 5687

Alloy 600 nickel, also known as Inconel, withstands even higher temperatures than Alloy 400. Diameter tolerance is ±0.0006″. Maximum temperature is 1000° F.

Nickel Chromium—Bright Finish

- Bend-and-stay wire (soft temper)
- Meets ASTM B267 and B344

Made of nickel chromium, commonly referred to as Chromel C, this wire is often used for heating elements, resistance windings, and hot wire cutters. Diameter tolerance is ±0.0002″ for diameters up to 0.020″; ±0.0006″ for diameters 0.025″ and larger. Maximum temperature is 1850° F.

Insulating Lead Wire

- Bend-and-stay wire (soft temper)
- Meets ASTM B29 and B749

Soft and formable, this wire is composed of 99.9% lead. It's dense, insulating, and corrosion-resistant, making it ideal for caulking and bearing alignment. Diameter tolerance is ±0.005″. Maximum temperature is 620° F. Finish is matte.

Ultra-Corrosion-Resistant Titanium Wire

- Bend-and-stay wire (soft temper)
- Meets ASTM B863

Considered commercially pure, this Grade 2 titanium wire is corrosion resistant and strong, yet it's still lightweight. Diameter tolerance is ±0.003″. Maximum temperature is 500° F. Finish is matte.

Expanded Metal Sheets with Diamond Openings

Raised Mesh

Flattened Mesh

Easily cut, form, and weld this expanded metal; sheets are lightweight, yet strong and rigid, and allow light and air to pass through.

Raised Mesh—Raised strands provide a skid-resistant surface. Sheets are excellent for use as safety guards for equipment or machinery.

Flattened Mesh—Formed from raised mesh that has been rolled to a smooth and flat finish, this mesh can be used to create protective enclosures, shelving, grilles, and baskets.

Decorative Metal Sheets with Patterned Openings

Cut, form, and weld these punched metal sheets. With numerous uses, decorative sheets can be used as guards and grilles and in architectural applications. All have an unpolished mill finish. Width and length tolerances are +¼″.

Metal Shim Stock Sheet Assortment and Refills

Master Assortment— Contains 59 pieces, including all seven materials (one sheet of each size and thickness) listed below. Furnished in a spacious 24″ Ht.×30″ Wd.×11½″ Dp. steel cabinet that can also be used to store your own tools and supplies. Shim stock is cold rolled and not rated for hardness. Width tolerance is ±0.01″. Length tolerance is ±¼″. Thickness tolerance is ±10% for all thicknesses, except 0.005″ thick sheets are ±16%.

9300K59 ..... **Each** $484.56

Low Carbon Steel Shim Stock

For strength and weldability, turn to this magnetic steel. All are cold rolled.

1008-1010 Low Carbon Steel Rolls—Full Hard Temper

- Hardness: Rockwell B90

Rolls will vary from Grades 1008 to 1010. Meet ASTM A109. Width tolerance is ±0.005″ for 6″ wide rolls and ±0.01″ for 12″ wide rolls. Length tolerance is +3″, −¼″.

Spring Steel Shim Stock

Spring steel is cold rolled and magnetic, has good wear resistance, and handles repeated stress well. ***Grade 1095*** is also known as blue-tempered steel; ***Grade 1075*** is also known as scaleless blue steel.

1095 Spring Steel Rolls—Full Hard Temper

- Hardness: Rockwell C48-C51

Rolls are polished and meet ASTM A682, A684, and MIL-S-7947. Width tolerance is ±0.010″. Length tolerance is ±½″.

Aluminum Shim Stock

Not only is aluminum shim stock nearly pure aluminum, it also has good electrical conductivity. The alloys we carry are lightweight, nonmagnetic, and cold rolled.

Alloy 1100/1145 Aluminum Rolls—Full Hard Temper

- Hardness: Not rated

Rolls are Alloy 1145, except 9708K74 is Alloy 1100. Meet ASTM B209. Width tolerance is ±0.005″. Length tolerance is +¼″.

Don't see the shim stock you need? Just tell us what you're looking for and we'll get it for you.

Color-Coded Aluminum Shim Stock

Stronger than plastic and designed for heavy duty use, these nonmagnetic sheets come in several colors for quick and easy size identification. They are cold rolled.

Alloy 1100/3003 Aluminum Sheets— ½ to Full Hard Temper

- Hardness: Brinell 32-44

Sheets 0.01″ thick and thinner are Alloy 1100; sheets 0.015″ thick and thicker are Alloy 3003. Width and length tolerances are ±1/16″.

Stainless Steel Shim Stock

Known for its corrosion and temperature resistance. All stainless steel shim stock is cold rolled. 300 series stainless steel may be slightly magnetic; Types 17-4 PH and 17-7 PH are magnetic. ***Type 316*** has the greatest corrosion resistance of the stainless steel we carry. ***Type 17-7 PH*** is stronger than the 300 series, while ***Type 17-4 PH*** is stronger than 17-7 PH.

Type 301 Stainless Steel Rolls— ½ Hard Temper

- Hardness: Rockwell C28-C38

Meet ASTM A240 and A666. Width tolerance is ±0.015″. Length tolerance is +2″.

Don't see the shim stock you need? Just tell us what you're looking for and we'll get it for you.

Nickel Shim Stock

Need good corrosion resistance in soft, easy-to-form shim stock? Then this cold-rolled, magnetic material is for you.

Alloy 200/201 Nickel Rolls—Soft (Annealed) Temper

- Hardness: Rockwell B50

Rolls will vary between Alloys 200 and 201. Width tolerance is ±0.005″. Length tolerance is ±¼″.

Thick.	Thick. Tolerance	6″ Wd.×25″ Lg.	Each	6″ Wd.×50″ Lg.	Each

Titanium Shim Stock

Titanium is 40% lighter than steel with a high strength-to-weight ratio, all while maintaining good corrosion resistance. It is nonmagnetic and cold rolled.

Grade 2 Titanium Rolls—Soft (Annealed) Temper

- Hardness: Rockwell B80

Width and length tolerances are ±0.015″.

Thick.	Thick. Tolerance	6″×50″	Each	12″×50″	Each

Plastic Shim Stock

Made of molded high-impact polystyrene, plastic shim stock is lightweight, corrosion resistant, and economical.

Sheets

- Hardness: Rockwell M60-M75

These 6″×6″ square shims are scored into 2″×6″ sections to make size adjustments easy. Meet ASTM D638. Not rated for maximum temperature. Sheets may be black or gray. Width and length tolerances are ±⅛″. Sold in packages of 8.

Thick.	Thick. Tolerance		Per Pkg. 1-4	Per Pkg. 5-Up
1/16″	±0.0312″	95015K5	$3.06	$2.63
⅛″	±0.0312″	95015K6	5.42	4.67
¼″	±0.0312″	95015K7	10.28	8.70

Color-Coded Plastic Shim Stock

Not only lightweight and economical, this extruded shim stock is rustproof, impervious to oil, and comes in several colors for quick and easy size identification.

Sheets

- Hardness: Not rated

Sheets up to 0.01″ thick are polyester. Sheets 0.0125″ thick are polycarbonate. Sheets 0.015″ to 0.06″ thick are PETG. Maximum temperature is 200° F for 0.0005″ to 0.0125″ thick sheets; 140° F for 0.015″ to 0.06″ thick. Width and length tolerances are ±1/16″.

Precision Shim Bushing Stock

The tight tolerances on these smooth, low-friction materials allow you to increase or decrease a shaft or rod diameter size by simply slipping the bushing over the shaft or rod. They also fit inside each other to increase more than one wall thickness. Use carbide blades to cut to a specific length for a bushing, spacer, shim, or sleeve bearing. Length is 6″.

Delrin® acetal resin combines strength and wear resistance with good chemical resistance. Hardness is Rockwell M94. Condition is extruded. Meets ASTM D4181 and is FDA compliant. Temperature range is –4° to +180° F. OD and ID tolerances are ±0.0005″. Length tolerance is +0.05″.

UHMW polyethylene does not absorb moisture and has good wear and corrosion resistance. Hardness is Rockwell D66. Condition is extruded. Meets ASTM D4020 and is FDA compliant. Temperature range is –22° to +180° F. OD tolerance is -0.02″. ID tolerance is +0.02″. Length tolerance is +½″.

Steel (Alloy 4130) offers good weldability. Hardness is Rockwell C30-C45. Temper is annealed with a hardened surface. Condition is cold finished. Meets ASTM A513, except 1½″ OD meets ASTM A519. OD tolerance is ±0.035″. ID tolerance is ±0.038″. Length tolerance is +⅛″.

Stainless steel (Type 440C) is harder than steel bushing stock, with good wear and corrosion resistance. Hardness is Rockwell C55-C60. Temper is full hard. Condition is cold drawn. Meets ASTM A276. OD tolerance is -0.0002″. ID tolerance is +0.0002″. Length tolerance is ±0.01″.

About the Thickness of Foil

Need help deciding which thickness you need? Use the box on the right to gauge how thick your foil will be. Common food service foil is 0.0015″ thick.

Aluminum Foil

Aluminum conducts electricity and heat, and is lightweight and corrosion resistant. Use this cold-rolled, nonmagnetic foil as a wrap, cover, mask, or patch. The ***1000 series alloys*** are nearly pure aluminum and the ***3000 series alloys*** are the most corrosion resistant of the aluminum alloys.

Alloy 1000/3000 Series Aluminum Rolls—Soft (Annealed) Temper

- Hardness: Not rated

General Purpose—Packed in a box; all except 0.002″ thick foil are suitable for use in the food industry. Made from 1000 series alloys. Meet ASTM B479. Width tolerance is ±3/32″. Length tolerance is +5 ft.

PTFE Coated—Made of 0.005″ thick Alloy 3003 with a 0.0005″ thick green PTFE coating on one side. The coating adds chemical resistance and has a slippery surface. Use as release liner in food packaging and as an EMI/RFI shield in electronic applications. Width tolerance is ±1/32″. Length tolerance is ±6″.

Adhesive Backed—Made of Alloy 1100/1145 with an acrylic adhesive. Width tolerance is ±1/64″. Length tolerance is +5 ft.

Alloy 1100/1145/1235 Aluminum Rolls—Full Hard Temper

- Hardness: Not rated

Rolls will vary between Alloys 1100, 1145, and 1235. Ideal as EMI/RFI shielding in electronic applications, these stiff rolls also resist folding. Width tolerance is ±1/8″. Length tolerance is +5 ft.

Alloy 3003/3105 Aluminum Rolls—½ Hard Temper

- Hardness: Not rated

The 0.012″ thick rolls are Alloy 3105 and the 0.016″ thick rolls are Alloy 3003. Width tolerance is ±1/8″. Length tolerance is ±6″ for 0.012″ thick rolls; ±5 ft. for 0.016″ thick rolls.

Alloy 1000 Series Aluminum Sheets—Soft (Annealed) Temper

- Hardness: Not rated

Suitable for use in the food industry. Meet ASTM B479. Width tolerance is ±1/16″. Length tolerance is +1/4″. Comes in a dispenser box of 500 sheets.

Wd. × Lg.		Per Pkg.
0.0005″ Thick (±0.00005″)		
9″ × 10¾″	9060K34	$16.45

Wd. × Lg.		Per Pkg.
0.0007″ Thick (±0.00007″)		
12″ × 10¾″	9060K35	$26.68

Black Aluminum Foil

Mask light leaks and eliminate unwanted reflections. A black paint coating on both sides enables this foil to absorb light. Foil is cold rolled and nonmagnetic.

Alloy 1100 Aluminum Rolls—Soft (Annealed) Temper

- Hardness: Not rated

Width tolerance is ±1/16″. Length tolerance is +6″.

Wd. × Lg.		Each
0.002″ Thick (±0.0002″)		
12″ × 10 ft.	7073T24	$18.66
24″ × 10 ft.	7073T26	33.66

Nickel Foil

Use this nickel-iron foil as a magnetic shield to protect electronic equipment from EMI/RFI interference. Foil is cold rolled.

Nickel Rolls—Soft (Annealed) Temper

- Hardness: Not rated

Meet ASTM A753. Width tolerance is ±1/64″. *Adhesive-backed* foil has a rubber adhesive.

Sold in 1-ft. increments; maximum continuous length is 100 ft. **To Order:** Please specify length.

Wd.	Plain Back	Per Ft.	Adhesive Backed	Per Ft.

Cobalt-Nickel-Chromium Foil

Also known as Elgiloy/Phynox, this cold-rolled, magnetic foil can handle repeated stress, has excellent formability, and is corrosion resistant.

Cobalt-Nickel-Chromium Strips—Full Hard Temper

- Hardness: Rockwell C48

Width tolerance is ±0.003″. Length tolerance is ±1/8″.

Stainless Steel Foil

Corrosion resistant even at high temperatures, this cold-rolled stainless steel foil is ideal as a wrap, cover, mask, or patch. All meet ASTM A240 (unless noted) and all types are nonmagnetic, except Type 430 is magnetic.

Type 304 Stainless Steel Rolls—Soft (Annealed) Temper

- Hardness: Not rated

Width tolerance is ±1/2″. Length tolerance is +5 ft. *Plain-back* foil makes good heat treating wraps for dry and oil-free parts, withstanding temperatures up to 1600°F. *Adhesive-backed* foil has an acrylic adhesive.

Stainless Steel Foil Bags

Foil bags offer durability at high temperatures, while providing the best possible heat treating of parts and tools in damp and corrosive environments. Made of nonmagnetic Type 309 stainless steel. Maximum temperature is 2100°F for up to 30 minutes. Temper is annealed. Width tolerance is ±0.005″. Length tolerance is ±1/8″.

Copper Foil

Nearly pure copper, this nonmagnetic foil is cold rolled and offers good electrical and heat conductivity.

Alloy 110 Copper Rolls—Soft (Annealed) Temper

- Hardness: Not rated

Meet ASTM B152. Width tolerance is ±1/64″. Length tolerance is +5 ft. for 50-ft. rolls and +8 ft. for 100-ft. rolls.

Brass Foil

The addition of zinc gives brass increased strength over copper. It's nonmagnetic, cold rolled, conducts heat, and is corrosion resistant.

Alloy 260 Brass Rolls—1/2 Hard Temper

- Hardness: Not rated

Meet ASTM B36. Width tolerance is ±0.01″. Length tolerance is +10%, –5%.

12″ × 12″	8939K25	$25.12

Slide-On Round Grips

Need to get a grip? Simply slide these grips onto handles. All have one closed end.

Standard— Made of heavy duty PVC for strength and durability. Temperature range is –20° to +180° F. **To Order:** Please specify color from those listed below.

High Temperature— They're made of silicone rubber to withstand temperatures of –50° to +600° F.

Cushioned— Made of closed-cell vinyl foam with a wall thickness of 0.125″ to 0.15″ to insulate and cushion vibration. Temperature range is –40° to +225° F.

Slide-On Rectangular and Square Grips

Grips fit flat, rectangular, and square handles and have one closed end.

Standard— Made of heavy duty vinyl for strength and durability. Temperature range is –20° to +180° F. Style 15 is a round grip with a rectangular slot. **To Order:** Please specify color from those listed.

Cushioned— The closed-cell vinyl foam has a wall thickness of 0.15″ to insulate and cushion vibration. Temperature range is –40° to +225° F.

Fits Size	O'all Lg.	Available Colors	Pkg. Qty.		Per Pkg.

Slide-On Round Grips with Hanger Eye

Standard

Cushioned

Create a handle and a hanger for your tools by slightly stretching these grips over them. Grips have finger grips to improve hold and one closed end. Temperature range is –10° to +150° F. Color is black.

Standard— Made of vinyl for durability.

Cushioned— The combination of vinyl and foam makes these durable and pliable.

Fits OD	O'all Lg.	Eye Lg.	*Standard*	Each	*Cushioned*	Each

Wrap-Around Grips with Open Ends

You don't have to slide these grips on tools; a hook-and-loop closure secures them anywhere on the handle. Loop strip has an adhesive backing so you can attach it to the handle and then wrap the hook strip around it. Grips will not rotate once they're in place.

Made of closed-cell vinyl foam with a wall thickness of 0.2″ for a soft, textured grip. Foam insulates and resists oil. Temperature range is –20° to +150° F. Color is black.

Fits OD	O'all Lg.	Pkg. Qty.		Per Pkg.

Slide-On Round Grips with Open Ends

1

2

3

Two open ends make these cushioned grips easy to stretch and fit anywhere along a handle. Made of vinyl foam, they insulate and cushion vibration. Temperature range is –20° to +220° F. Color is black. *Styles 1* and *2* can be cut with a utility knife and are closed-cell foam, so they resist moisture. *Style 3* is made of open-cell foam.

Mold-Your-Own Grips

Create a custom grip to perfectly suit your hand. Just place these white plastic pellets in 176° to 185° F hot water until they soften. Then mold directly to your handle. Grips become rigid when cool. Cut with scissors when warm, rotary tools when cold. The material is reusable. Comes in a 1-lb. jar.

6225T11 ..... **Each** $22.92

Wrap-On Grips

Wrap these around handles to create a nonslip, grippable surface. Simply cut to length with scissors. All come with finishing tape to fasten ends.

Thin Wrap— Made of absorbent, polyurethane-coated nylon/rayon fabric. Temperature range is 0° to 120° F. Color is blue.

Peel-and-Stick Adhesive-Backed Foam— Made of EPDM foam with a temperature range of –20° to +150° F. Color is black.

Thick Foam— Extra cushioning resists damage from water and sunlight. Made of CPE (chlorinated polyethylene) and EPDM. Temperature range is –65° to +250° F. Color is black.

Push-On Round Caps *(Continued from previous page)*

Resilient Rubber with Mushroom Head

The mushroom head extends beyond the diameter of your pipe or tube for added protection. Made of EPDM with a durometer hardness of 65A-70A. Maximum temperature is 100° F. Color is black.

Fits OD	Inside Ht.	O'all Dia. × Ht.		Each
1/2"	11/16"	2 1/4" × 1"	5896T5	$7.33
5/8"	11/16"	2 1/4" × 1"	5896T6	7.33

Pliable Vinyl

Strong yet pliable, these vinyl caps will protect and mask. Caps that fit a range of ODs will stretch slightly (the lower end will have a looser fit; the upper end will be tighter).

Standard—Durometer hardness is 75A. Maximum temperature is 140° F for 10 minutes. Color is black.

High Temperature—Withstands temperatures up to 446° F for 10 minutes and has a durometer hardness of 88A. Color is black.

FDA Compliant—Made from FDA-compliant vinyl with a durometer hardness of 60A-70A. Maximum temperature is 200° F. Color is white.

Shrink-to-Fit Round Caps

Put on one of these polyolefin caps and heat it up—it'll shrink to the size and shape of whatever it's covering. An EVA adhesive lines the inside of the cap to form a permanent bond when shrunk, preventing moisture from getting in. Durometer hardness is not rated. Caps shrink at 194° F. Maximum temperature for the caps is 300° F for 15 minutes; adhesive has a maximum temperature of 257° F. Color is black.

Threaded Round Caps

The outside ridges improve your grip as you simply twist these threaded caps on and off. They fit JIC/SAE fittings.

Polyethylene—Durometer hardness is 40D. Maximum temperature is 150° F for 10 minutes. Color is red.

Aluminum—Meet MIL-C-5501/3. Not rated for hardness. Maximum temperature is 650° F.

Push-On High-Visibility Caps

1

2

3

Get caps that really stand out. Their bright colors make them visible, so they're good for covering sharp ends. Made of polyethylene with a maximum temperature of 120° F.

Styles 1 and 2—Durometer hardness is 52A.

Style 3—Compliant with OSHA 1926.701(b), these caps have a steel insert and can withstand 250 lbs. from a 10-ft. drop. Top is 4″×4″. Not rated for hardness.

Push-On Rectangular and Square Caps

Rectangular, Flat End

Rectangular, Round End

Square, Tapered End

Square, Flat End

Rectangular—Made of vinyl, use these caps as covers and masking for rectangular objects. Durometer hardness is 75A. Maximum temperature is 140° F for 10 minutes. Color is black.

Square—They're perfect protection for the ends of square tubes. Color is black. Caps with a *tapered end* are vinyl and have a durometer hardness of 60A-80A and a maximum temperature of 350° F for 15 minutes. Caps with a *flat end* are polyethylene and have a durometer hardness of 54D and a maximum temperature of 180° F for 15 minutes.

Snap-In Pole Caps

Round Cap

Square Cap

Keep your poles safe from the elements with these UV- and weather-resistant glass-filled polyester caps. As you insert the cap stem into the pole, the spring straps at the base of the cap bend. This creates force against the inside of the pole to hold the cap securely in place. Rockwell hardness is R119. Maximum temperature is 266° F. Color is black.

Push-In Tapered Round Plugs

They're tapered, allowing these plugs to conform to your hole diameter for a tight seal.

Resilient Rubber

When you're dealing with harsh environments, use these EPDM plugs. Durometer hardness is 40A-70A. Maximum temperature is 475° F for 10 minutes. Color is black.

Trade-Sized Expandable Resilient Rubber

Just place one of these plugs into your opening and tighten the wing nut—the sides expand to create a seal. Nut is stainless steel.

General Purpose— Made of a natural rubber and SBR blend for good abrasion and impact resistance. Durometer hardness is 45A. Maximum temperature is 180° F for 20 minutes. Color is black.

High Temperature— They're silicone, so they can withstand temperatures up to 550° F. They also have excellent weather resistance. Durometer hardness is 55A. Color is red.

Tapered Push-In Round Plugs with Flange

They're tapered for easy insertion, while the flange makes for easy removal. Made of vinyl, they can also plug tiny openings.

Standard— Durometer hardness is 60A-70A. Maximum temperature is 350° F for 20 minutes.

High Temperature— Durometer hardness is 85A-95A. Maximum temperature is 400° F for 20 minutes.

Rigid Plastic with Static Control

Protect electrical connectors with straight threads and unthreaded bayonet-type connectors from static. These polyethylene plugs meet static requirements of MIL-B-81705C, Type II. Maximum temperature is 140° F.

Conductive—Provide electrical shielding. Surface resistivity is less than 1×10^{5} ohms/sq. Durometer hardness is 46D. Color is black.

Static Dissipative—Keep equipment safe from harmful electrical currents. Surface resistivity is less than 1×10^{12} ohms/sq. Durometer hardness is 55A-65A. Color is pink.

Push-In Finishing Plugs for Tubing

Smooth, Square — *Ribbed, Round*

Give tubes straight, clean ends by plugging them with these polyethylene plugs. Color is black.

Smooth—*Square* plugs have a durometer hardness of 41D-46D and a maximum temperature of 150° F. *Rectangular* plugs have a durometer hardness of 54D and a maximum temperature of 180° F for 15 minutes.

Ribbed—Their flexible ridges allow these plugs to fit a wide range of tube sizes. *Square* and *rectangular* plugs have a durometer hardness of 41D-49D and a maximum temperature of 150° F. *Round* plugs have a durometer hardness of 54D and a maximum temperature of 180° F for 15 minutes.

Tool-Installed Round Sealing Plugs

Choose these plugs to permanently seal drilled unthreaded holes. All plugs are stainless steel. Maximum temperature is not rated.

To install, drill a hole using a drill with a size that matches the hole ID. Plugs with 5/32″ to 9/32″ hole diameters require a 90° point drill. Plugs with 5/16″ to 15/32″ hole diameters require a 118° point drill. Insert the plug in the hole, then press the ball bearing into place by striking the installation tool (sold separately) with a hammer or by using an arbor press. The hole size should have a tolerance of 0 to +0.004″.

Threaded Round Plugs

Raised Head

Protect NPT-threaded ports with these polyethylene plugs. Meet MIL-C-5501/5. Durometer hardness is 60D-70D. Maximum temperature is 165° F. Color is red.

Square-head plugs have tapered threads; ***serrated round-head plugs*** have straight threads.

Recessed Head

37° Flared Fitting Plugs— For use on JIC/SAE fittings. *Polyethylene* plugs have a durometer hardness of 40D, a maximum temperature of 150° F for 10 to 20 minutes, and are red in color. *Aluminum* plugs also fit straight-thread ports, are not rated for hardness, and have a maximum temperature of 650° F.

SAE Straight-Thread O-Ring Port Plugs— Ideal around fluid power components. Made of polyethylene with a durometer hardness of 60D-70D. Maximum temperature is 165° F. Color is red.

Flat-Faced O-Ring Hydraulic Fitting Plugs— Protect fluid lines and fittings. Made of aluminum. Hardness is not rated. Maximum temperature is 650° F.

Straight Tube and Hose Assembly Plugs— Form a low-pressure seal on straight tube ends. Made of aluminum. Hardness is not rated. Maximum temperature is 650° F.

Pull-Through Round Plugs

Just use the thinner end of these plugs to pull the larger end into the hole and then pull the thinner end again to take the plug right out. The larger end stretches to fit and forms a tight seal when inserted in the hole. Durometer hardness is 40A-60A.

Standard— Made of EPDM with a maximum temperature of 350° F for 10 minutes. Color is black.

High Temperature— Made of silicone with a maximum temperature of 600° F for 10 minutes.

For information about rubber, see page 3526. For vibration-damping mounts, see pages 1374-1383.

Bumpers with Threaded Stud

Our bumpers have a built-in stud so you won't need additional fasteners for installation.

Bumpers with Metal Core

Inch and Metric

Inch with Hex Shoulder

Bumpers with a metal core withstand impact with a tough steel core that is surrounded by cushioning material. For indoor and outdoor use. *Medium-soft* bumpers have a durometer hardness of 40A. *Hard* bumpers have a durometer hardness of 70A-80A.

Neoprene rubber bumpers are gasoline and oil resistant. Temperature range is –40° to +200° F. Material is marking but nonstaining. Color is black. ***Polyurethane*** bumpers are abrasion and ozone resistant. Temperature range is –65° to +200° F. Material is marking but nonstaining. Color is red.

Bumpers without Metal Core

Round

Recessed

Bumpers without a metal core have a built-in screw surrounded by cushioning material. Durometer hardness is 70A-80A, unless noted.

SBR rubber bumpers are abrasion resistant. Temperature range is –30° to +180° F, unless noted. For indoor use. All are nonmarking except the 7/16″ dia. bumper which is marking. Color is black. ***Polyurethane*** bumpers are abrasion and ozone resistant. Temperature range is –65° to +200° F. For indoor and outdoor use. Material is marking but nonstaining. Color is red.

Roller Bumpers

For Round Tubing

For Square Tubing

Protect equipment and adjacent surfaces with these SBR rubber roller bumpers. They easily fit over round and square tubing and rods; a concealed bolt holds it together. Material is medium-hard with a durometer hardness of 67A. Temperature range is –40° to +180° F. For indoor and outdoor use. Material is nonmarking. Color is gray.

McMASTER-CARR®

For information about rubber, see page 3526. For vibration-damping mounts, see pages 1374-1383.

Bumpers with Threaded Hole

These bumpers have a hole for quick installation and removal. They have a tough steel core surrounded by a cushioning material that withstands impact. *Medium-soft* bumpers have a durometer hardness of 40A, unless noted; *hard* bumpers have a durometer hardness of 70A-80A, unless noted. For indoor and outdoor use. Materials are marking but nonstaining.

Neoprene rubber bumpers are gasoline and oil resistant. Temperature range is –40° to +200° F, unless noted. Color is black. ***Polyurethane*** bumpers are abrasion and ozone resistant. Temperature range is –65° to +200° F, unless noted. Color is red.

Shock Absorbing Load-Rated Threaded Bumpers

Threaded Stud

Threaded Hole

Threaded Stud

Threaded Hole

Designed to dampen vibration and shock, these bumpers are for applications that require load ratings. They have a metal plate for added reinforcement.

Polyurethane bumpers provide low bounce-back and are nonmarking. *Extra-soft* and *medium-soft* bumpers are slightly tacky. Temp. range is –40° to +160° F. For indoor use only. Color is black. *Medium-hard* bumpers have a temp. range of 55° to 194° F. For indoor and outdoor use. Color is black.

Synthetic rubber bumpers have a temp. range of –4° to +158° F. For indoor and outdoor use. Color is black.

Silicone rubber bumpers are ideal for high-temperature applications. Temp. range is –80° to +300° F. For indoor and outdoor use. Material is nonmarking. *Soft* bumpers are black; *hard* bumpers are orange.

Neoprene rubber bumpers are oil and gasoline resistant. Temperature range is –30° to +170° F. For indoor and outdoor use. Material is marking but nonstaining. Color is black.

Bumpers with Unthreaded Through Hole

1

2

3

4

5

Bumper with Steel Base Plate

6

Bumper with Aluminum Base Plate

Also known as recessed bumpers, these bumpers can be installed with a screw (not included). All are for indoor and outdoor use except SBR rubber bumpers which are for indoor use. *Bumpers with washers* have a metal washer embedded at the base of the recess, giving them added strength and reinforcement. *Rectangular* bumpers have a 1/8″ thick metal plate at their base for added reinforcement.

SBR rubber bumpers are abrasion resistant. All have a temperature range of –30° to +180° F. Material is nonmarking. All are black except *Style 5* which is gray.

Vinyl bumper is load rated with a temperature range of 55° to 105° F. Material is nonmarking. Color is blue.

Thermoplastic elastomer bumpers are made of a plastic that acts like rubber but won't dry out and become brittle. Temperature range is –90° to +250° F. Material is nonmarking. Color is black.

Polyethylene bumpers have the hardest durometer of the bumpers that we offer. Temperature range is –50° to +150° F. Material is nonmarking. Color is black.

Neoprene bumpers are gasoline and oil resistant. Temperature range is –40° to +200° F. Material is marking but nonstaining. Color is black.

Polyurethane bumpers are abrasion and ozone resistant. Temperature range is –40° to +200° F. Material is marking but nonstaining. Color is red.

● Has a threaded through hole.

For information about rubber, see page 3526.

Push-In Bumpers

Simply press into a hole and—*voilà*—you have a bumper. ***Styles 9-12*** have an additional ridge for a tight grip. ***Styles 12-15*** compress to fit into tight holes.

SBR rubber bumpers are abrasion resistant. Temperature range is –30° to +180° F. For indoor use. Material is marking, unless noted. Color is black.

Thermoplastic elastomer bumpers are made of plastic that acts like rubber but won't dry out and become brittle. Temperature range is –90° to +220° F. For indoor and outdoor use. Material is nonmarking. Color is black.

Polyurethane bumpers provide low bounce-back. Temperature range is –40° to +160° F. For indoor use. Material is nonmarking. Color is black.

♣ Material is nonmarking.

Military Specification Bumpers with Unthreaded Through Holes

Meet Mil Spec MIL-G-3036 and are AN (Army/Navy) approved. Made from abrasion-resistant Buna-N rubber, these bumpers have a metal washer embedded at their base for added strength and reinforcement. They can be installed with a screw (not included). Bumpers are medium-soft with a durometer hardness of 50A. Temperature range is –45° to +250° F. For indoor use. Material is marking. Color is black.

Tack Bumpers

Install these bumpers with just a few taps of a hammer or by pushing them in. Made of abrasion-resistant SBR rubber with a steel tack, bumpers are medium-hard with a durometer hardness of 65A-70A. Temperature range is –30° to +180° F for the *round top* bumpers and –60° to +212° F for the *flat top* bumpers. For indoor use. Material is marking. Color is black.

For information about rubber, see page 3526

Adhesive-Backed Bumpers

Installation is no problem with these adhesive-backed bumpers—just press them into place. They are also used as pads and feet. Comparable to Bumpon bumpers. All are for indoor and outdoor use except for vinyl bumpers, which are for indoor use. Materials are nonmarking.

Vinyl bumpers have an acrylic adhesive that offers long term hold. Temperature range of vinyl and adhesive is 50° to 100° F.

Polyurethane bumpers are more abrasion resistant than vinyl bumpers. Adhesive is rubber-based and has a temperature range of 40° to 150° F, unless noted. Temperature range for polyurethane is 0° to 180° F, unless noted.

Polyolefin foam rubber bumpers offer good slip protection. Adhesive is rubber-based. Temperature range for polyolefin foam rubber and adhesive is –20° to +150° F.

Felt bumpers are great for protecting surfaces from scuffs and scrapes. Adhesive is rubber-based. Temperature range for felt and adhesive is –20° to +160° F.

Silicone foam rubber bumpers are ideal for high-temperature applications. Material is FDA compliant, unless noted. Adhesive is acrylic-based and has a temperature range of –15° to +225° F. Temperature range for silicone foam rubber is –100° to +450° F.

For information about rubber, see page 3526. For information about plastics, see page 3564.

Load-Rated Adhesive-Backed Rubber Bumpers

Use these load-rated bumpers as pads and feet to protect sensitive items such as electronics from impact and vibration. Durometer hardness is 30 OO for *extra-soft* bumpers; 50 OO for *soft* bumpers; 70 OO for *medium-soft* bumpers; and 56A for *medium-hard* bumpers. Materials are nonmarking. Adhesive is acrylic.

Polyurethane bumpers have a temperature range of –40° to +160° F. For indoor use. Color is black. ***Vinyl*** bumpers have a temperature range of 55° to 105° F. For indoor and outdoor use. Color is blue.

Wear-Resistant Adhesive-Backed Plastic Bumpers

With good wear resistance and low friction, you can use these plastic bumpers as pads and feet to protect surfaces. For indoor and outdoor use. Materials are nonmarking. Adhesive is acrylic. Color is white.

PTFE bumpers have increased temperature and chemical resistance over UHMW polyethylene. Bumpers are extra-hard with a durometer hardness of 51D. Temperature range of PTFE is –100° to +500° F; temperature range of adhesive is –20° to +180° F. ***UHMW polyethylene*** bumpers are extra-hard with a durometer hardness of 65D. Temperature range is –50° to +160° F.

Heavy Duty Rubber Guards

Protect your dock and warehouse areas with these durable, weather- and abrasion-resistant rubber guards that absorb shock and vibration. Mount with screws (not included). Temperature range is –40° to +160° F. For indoor and outdoor use. Material is marking. Color is black, unless noted.

Nylon/polyester reinforced SBR rubber guards are hard with a durometer hardness of 80A, unless noted. *Style 1* has one 1 3/4" dia. reflector. *Style 3* has two reflectors. 2239T3 has 1 3/4" dia. reflectors; 2239T4 and 2239T13 have 2 1/8" dia. reflectors.

SBR rubber guards are medium-hard with a durometer hardness of 60A-75A, unless noted. *Styles 7, 8,* and *9* have a steel washer molded into the rubber above the mounting hole for added reinforcement. *Style 11* slopes on one end at a 15° angle.

♣ Guard is hard with a durometer hardness of 80A. ♦ Color is yellow.

Load-Rated Heavy Duty Polyurethane Guards

Also called crane bumpers, these polyurethane guards are oil and grease resistant. Guards have a steel plate with mounting holes (screws not included) and are extra-hard with a durometer hardness of 90A. Temperature range is –60° to +225° F. For indoor and outdoor use. Material is nonmarking. Color is black (unless noted). Meet OSHA and ANSI requirements.

Heavy Duty Laminated Rubber Guards

Horizontal Mount

Horizontal Mount w/ Steel Face

Vertical Mount

Cushion impact to docks and buildings with these guards that can withstand loads of 5,000 psi. Multiple shock-absorbing layers of rubberized fabric are strung on 3/4″ dia. rods and bolted tightly together at both ends with 1/4″ thick steel angle brackets. Guards have 3/4″ square mounting holes, unless noted (fasteners not included). Temperature range is not rated. For indoor and outdoor use. Material is marking. Color is black.

Guards with steel face have a 3/8″ thick steel floating plate on a cushion of laminated rubber.

Heavy Duty Corner and Surface Guards

A

B

With Metal Bar

C

D

E

F

G

Often used in warehouses, these guards prevent damage to your docks and equipment. For indoor and outdoor use.

EPDM rubber and ***EPDM/SBR rubber*** guards are hard with a durometer hardness of 70A, unless noted. *Styles A* and *B* cushion impact and can be mounted using galvanized steel lag bolts (not included). Temperature range is –50° to +220° F, unless noted. Gray material is nonmarking; black material is marking. *Style C* guards without a metal bar allow you to drill your own holes as needed; guards with a metal bar have mounting holes (fasteners not included). Temperature range is –40° to +160° F. Material is marking.

Thermoplastic rubber guards are medium-hard with a durometer hardness of 60A. Material is marking. Temperature range is –20° to +180° F. They have a hollow back and can be mounted with bolts (not included).

Vinyl corner guards are extra-hard; durometer hardness is not rated. Mount them to corners and edges—they'll provide an extra degree of cushion at the point of contact. Mount with screws or nails (not included). Temperature range is not rated. Material is marking.

♣ Depth is tapered. ■ Guard has a yellow stripe. ♦ Guard is notched to fit irregular corner angles.
★ Guard is medium-hard with a durometer hardness of 55A.
● Temperature range is –20° to +150° F. ▲ Counterbore hole dia. is 5/8″.

For information about rubber, see page 3526.

Corner and Surface Guards with Metal Insert

Commonly used to protect carts and equipment, these guards have a metal insert for additional strength, unless noted. Install *Style A* from its unexposed side to conceal fasteners and install *Styles B, C, D* and *E* from their exposed side (fasteners not included). Materials are nonmarking.

SBR rubber is more impact and abrasion resistant than vinyl. Material is hard with a durometer hardness of 75A-80A, unless noted. Temp. range is –50° to +180°F. For indoor and outdoor use.

Vinyl surface guards conform to contours better than SBR rubber. Material is hard with a durometer hardness of 80A. Temperature range is –20° to +150°F. For indoor use.

Flexible Heavy Duty Corner and Surface Guards

Mount these flexible guards flat or around corners to provide cushioned impact protection. For indoor and outdoor use. Materials are nonmarking.

Polyurethane foam guards have an adhesive back. *Soft* guards, with a durometer hardness of 20A, have a temperature range of –10° to +160°F for the material; adhesive temperature is not rated. *Medium-hard* guards, with a durometer hardness of 55A, have a temperature range of –30° to +175°F for the material and adhesive.

Fabric/foam guards have a polyester covering that provides long wear plus an inner cushion of closed cell foam that restricts water, air, and gas from passing through. Mount with fasteners (not included). Durometer hardness and temperature range are not rated.

EPDM rubber guards are more abrasion resistant than vinyl, and they also resist UV rays and salt water. Mount with fasteners (not included). Guards are hard with a durometer hardness of A70. Temperature range is –30° to +200°F.

Vinyl guards resist corrosion, salt water, and fungi. Mount with fasteners (not included). Guards are hard with a durometer hardness of 80A. Temperature range is –20° to +150°F. Guards are nonmarking. Mount *end caps* on guards for a finished look (fasteners not included). End caps are made of black polyurethane and are extra-soft with a durometer hardness of 25A-35A. Temperature range is –40° to +170°F.

Plastic Corner Guards and Surface Guards

1

2

3

4

5

6

All materials are for indoor use (unless noted) and are nonmarking except Style 6 guards, which are marking but nonstaining.

Polycarbonate Corner Guards and Surface Guards

Rely on these polycarbonate guards for your applications where durability is a must. Guards are extra-hard; durometer hardness is not rated. Temperature is not rated. ***Adhesive-backed guards*** mount to most clean surfaces. ***Screw-mount guards*** have drilled holes and are furnished with #6 screws, unless noted.

To Order: For Corner Guards, please specify color: clear, beige, black, or dark brown. Not sure what color you need? Order the selector pack listed below.

★ Guards are nail-on and include 1 3/16″ nails.

Vinyl Corner Guards

With a rubber-based adhesive back, these vinyl strips mount to most clean surfaces. End caps snap onto corner guards to provide a finished look. Corner guards are extra-hard with a durometer hardness of 78D-79D.

Adjustable angle corner guard forms to fit rounded and awkward corners. Temperature range is not rated. For outdoor use. ***90° angle corner guards*** have a temperature range of –50° to +164° F; temperature range of adhesive is 0° to 150° F.

To Order: For Adjustable Angle Corner Guard, please specify color: beige, charcoal gray, dark brown, or white. For Corner Guards and End Caps, please specify color: beige or black.

Not sure what color you need? Order a selector pack listed below.

Cushioning Bulb Plastic Corner Guards

Corner Guard

90° Angle Connector

Straight Connector

A flexible bulb on these vinyl guards protects corners and cushions against the guard's edge. Material is hard; *guard* bulb has a durometer hardness of 75A; flat ends have a durometer hardness of 45D. *Connectors* have a durometer hardness of 30A. Maximum temperature is 90° F. For indoor and outdoor use. Material is nonmarking. Color is clear.

Adhesive-backed corner guards mount to most clean surfaces. Adhesive is acrylic. ***Screw-mount corner guards*** can be drilled to mount with screws or nails (fasteners not included). ***Connectors*** are vinyl and join guards together.

(A)	(B)	(C)	Adhesive-Backed Guards	Each	Screw-Mount Guards	Each

For information about rubber, see page 3526. For information about plastics, see page 3564.

Stainless Steel Corner and Surface Guards

Choose these guards for applications requiring corrosion resistance. For indoor use. Type 304 stainless steel offers increased corrosion resistance over Type 430 stainless steel.

Adhesive-backed guards have a rubber-based adhesive with a temperature range of 65° to 150°F. ***Cement-on guards*** require construction adhesive (not included; see page 3420). You can also drill them to mount with screws (not included). ***Screw-mount guards*** mount directly to the floor with the included 1/2" dia. bolts. Install ***end caps*** for a finished look and ***connectors*** to join two surface guards together. End caps and connectors are made of black ABS plastic and are nonmarking.

For information about rubber, see page 3526.

Aluminum Wall Guards

Our rigid aluminum guards offer heavy duty protection and are ideal for washdown applications. They are approximately 3/64″ thick and have a raised diamond pattern. For indoor use.

Use the ***wall base*** to cover gaps between walls and floors and the ***corner guards*** to protect outside wall corners from impact. They have a rubber-based adhesive for easy installation. Just remove backing and press into position.

Install the ***crown molding*** and the ***outside*** and ***inside crown molding corners*** for a decorative finish where the wall meets the ceiling. Mount with nails, screws, or construction cement (not included).

Vinyl Wall Bases

Wall Base

With a tapered top and coved bottom lip, these wall bases seal the corner where the wall meets the floor. Bases are extra-hard with a durometer hardness of 90A-94A. For indoor use. Material is nonmarking.

Adhesive-backed wall bases offer easy installation; just peel off backing and press into place. Adhesive is synthetic resin. You can also form them into inside and outside corners. Temperature range for material and adhesive is 32° to 120° F.

Wall bases require adhesive (sold separately below) to mount. They can be shaped to make inside and outside corners, or select the outside and inside corners that come already shaped into an angle. Bases and corners meet ASTM F1861. Temperature range is 50° to 110° F. Not sure what color you need? Order the selector pack listed below.

Wall-base adhesive is required to mount cement-on wall bases and corners. The 1-gallon can of acrylic-based adhesive covers 400-480 ft. of 2 1/2″ high bases; 250-300 ft. of 4″ high bases; or 166-200 ft. of 6″ high bases. Temperature is not rated.

Bracket-Mount Metal Bumper Rails

Combine components to create a railing system that protects surfaces. Components are sized to fit together and mount on floors and walls. For indoor and outdoor use.

Styles B, C, and ***D*** include mounting screws. ***Style H*** connector includes adhesive and a mixing stick to connect two lengths of rail (any material). When installed, the connector is completely concealed by the rail.

★ Rail is bright polished Type 304 stainless steel. ● Rail is bright black powder-coated Type 304 stainless steel.

For information about rubber, see page 3526.

Rubber Edge Trim

Cover exposed or unfinished metal, plastic, wood, and glass edges with this flexible rubber trim. Installation is simple—just press onto edge. All are medium-hard with a durometer hardness of 45A-70A except silicone foam rubber which is soft with a durometer hardness of 60 OO-75 OO.

Neoprene rubber (Styles 1 and 3-8) has good fuel, water, and ozone resistance. Temperature range is –40° to +158° F. For indoor and outdoor use. Material is nonmarking.

EPDM rubber (Styles 1 and 9) has excellent weather and ozone resistance. Temperature range is –50° to +300° F. For indoor and outdoor use. Material is marking.

SBR rubber (Styles 1-3 and 10) has excellent abrasion resistance. For indoor use. Temperature range is –20° to +225° F. *Styles 1-3* are marking and *Style 10* is nonmarking.

Silicone rubber and ***foam rubber*** (Styles 3 and 6) have excellent high temperature resistance. Temperature range is –85° to +450° F. For indoor and outdoor use. Material is nonmarking. *Silicone foam rubber* is closed cell.

Conductive EPDM rubber (Style 10) has a surface resistivity of 1.41 ohms. Temperature range is –20° to +250° F. For indoor use. Material is nonmarking.

To Order: Please specify length from available lengths listed below.

8-Piece SBR Rubber Edge Trim Assortment— Includes 6″ lengths of items marked with ★.

Vinyl Trim

Unlike metal trim, vinyl offers flexibility.

Adhesive Backed— Just peel off the release paper and press into place. Trim is extra-hard with a durometer hardness of 90A-97A. Temperature range for vinyl and acrylic adhesive is –20° to +150° F. For indoor and outdoor use. *Styles 1* and *5* are nonmarking; *Styles 2, 3,* and *4* are marking.

Plain Back— Install *Style 5* with tape that has adhesive on both sides (not included). Trim is extra-hard with a durometer hardness of 90A. Temperature range is –20° to +150° F. For indoor and outdoor use. Material is marking. Install *Style 6* with contact cement (not included). Trim is extra-hard with a durometer hardness of 74D-78D. Temperature range is 50° to 90° F. For indoor use. Material is nonmarking. *Style 6 white trim* matches Wilsonart Frosty White 1573, Nevamar Solid White S7004, and Pionite Carnation White SW806. *Style 6 black trim* matches Formica Black 909, Wilsonart Black 1595, Nevamar Black S-6-1, and Pionite Black SE101.

To Order: Please specify 10-, 25-, 50-, or 100-ft. length.

Self-Gripping Vinyl Edge Trim with Metal Core

A metal core and one or two gripping fingers hold this flexible vinyl edge trim in place. It's easy to install—just push onto an edge. Material meets FMVSS 302 flammability rating. Temperature range is –20° to +150° F. For indoor and outdoor use. Material is nonmarking.

Styles 7, 8, 10, 11, and ***12*** are hard with a durometer hardness of 80A-85A. ***Style 9*** is medium-hard with a durometer hardness of 65A.

6-Piece Assortment— Includes 4″ lengths of items marked with ★..... **8451A5** **Each** $4.04

To Order: Please specify length from available lengths listed below.

Plastic Edge Trim

Because these edge trim strips are flexible they'll conform to flat and round edges. Just cut to desired length and push onto edge—the firm, positive grip holds the strip in place. Materials are nonmarking.

Polyethylene trim has a temperature range of –30° to +149° F. *Styles 1, 3,* and *5* are for indoor and outdoor use; *Styles 2* and *4* are for indoor use. Choose trim with an adhesive strip located on its inside top for an additional grip. Material is extra-hard; *Styles 1, 3,* and *5* have a durometer hardness of 51D-54D, and *Styles 2* and *4* have a durometer hardness of 88A-92A.

Nylon trim is extra-hard with a durometer hardness of 98A-102A. Temperature range is –40° to +180° F. For indoor use. Meets Mil. Spec. MS-21266.

Nylon-Coated Stainless Steel Edge Trim

Use these Type 304 stainless steel edge trim strips to protect wire, cable, and hose from sharp edges. They're flexible so they'll conform to flat, round, and irregular-shaped edges. To install, just push onto the edge—the firm, positive grip holds the trim in place. For indoor and outdoor use. Material is nonmarking. Meets UL 94V0 flammability rating. Use cutting shears (sold separately below) to cut edge trim to desired length.

Nylon-coated stainless steel trim is excellent for harsh temperatures, shock, and vibration. Temperature range is –40° to +285° F. Meets Mil. Spec. NASM22529-1.

Cushioned nylon-coated stainless steel trim has a channel that provides additional cushioning protection. Temperature range is –40° to +185° F.

Push-In Stem Polyethylene Trim

A barbed rib anchors this polyethylene trim in place and provides a snug fit. The trim flattens against the surface when installed. Trim requires a groove or opening 0.002″ smaller than stem thickness (C) for installation. It is extra-hard with a durometer hardness of 95A. Temperature range is –10° to +150° F. For indoor use. Material is marking but nonstaining.

To Order: Please specify black or white, and length from available lengths listed.

Clear Vinyl Edge Trim

In addition to providing wear and abrasion resistance, this vinyl edge trim meets FDA requirements for food applications. Just press-fit it into place. Temperature range is –45° to +165° F. For indoor and outdoor use. Material is nonmarking.

For information about plastics, see page 3564.

Adhesive-Backed Plastic Trim

Made of a flexible polyolefin/polypropylene blend, this trim has an adhesive backing so it installs quickly. Material is extra-hard; durometer hardness is not rated. Temperature range is not rated. For indoor and outdoor use. Material is nonmarking.

(A)	(B)	Color	Lg.		
1″	1/4″	Black	6 ft.	1684A23	$15.96
2″	1/4″	Black	6 ft.	1684A25	24.56

Wear-Resistant Plastic Trim

Place this durable edge trim over rails and guides along conveyors to minimize friction. Press-fit it on edges or mount with screws; screws are not included.

PTFE (polytetrafluoroethylene) is chemical resistant and provides a nonstick surface. Material is extra-hard with a durometer hardness of 55D. Temperature range is –350° to +500°F. For indoor and outdoor use. Material is nonmarking. *Style 1* mounts only with screws.

UHMW polyethylene has excellent wear resistance. Meets FDA requirements for direct food contact. Material is extra-hard with a durometer hardness of 68D. Temperature range is –22° to +180°F. For indoor use. Material is marking but nonstaining. *Styles 1, 2,* and *13* mount only with screws.

MDS-filled (molybdenum disulfide) nylon 6 is resistant to ammonia and oils. It provides better abrasion and wear resistance than regular nylon. Material is hard; durometer hardness is not rated. Temperature range is –40° to +225°F. For indoor use. Material is nonmarking. *Styles 4-8* and *11* press fit on edge.

To Order: Please specify length from those listed below. The last length listed is full-roll length.

Metal Trim

Give your edges maximum protection with this tough metal trim. Just press-fit or screw onto the edge to install. Length tolerance is ±1/4″.

Stainless steel trim offers corrosion resistance. *Type 430* has a highly polished look, *Type 304* is a good general-purpose stainless steel, and *Type 316* has the best corrosion resistance of the stainless steel trims we offer. ***Aluminum*** trim is easy to machine, lightweight, and offers good corrosion resistance. It is also anodized for a tough finish.

Styles 1-6 are ideal for panels, boards, signs, and mirrors. *Styles 5* and *6* can also be used to join two edges together. *Style 7* is for outside edges. *Style 8* is used to finish and connect panel sections. *Style 9* is great for step nosing. *Styles 10* and *11* protect walls and cabinets from impact.

Trim with Screw Holes—Fasteners are not included. *Styles 2* and *3* have holes on 4″ centers and require #5 fasteners. *Styles 4, 9, 10,* and *11* have countersunk holes on 6″ centers. *Style 4* requires #8 fasteners. *Style 9* requires #5 oval-head fasteners. *Style 10* ***aluminum*** trim requires #5 oval-head fasteners; ***Type 304 stainless steel*** trim requires #4 fasteners; and ***Type 316 stainless steel*** requires #8 fasteners (unless noted). *Style 11* requires #8 fasteners (unless noted).

Tool-Installed Two-Piece Grommets

Grommet and Plain Washer

Grommet and Washer with Teeth

Grommet and Washer with Extended Neck

Rolled-Rim Grommet and Washer with Teeth

Give your holes some extra reinforcement with these metal grommets. Trade size is often stamped on the grommet and refers to the size of installation tool needed and the hole size to be cut into the material before setting. Use the Grommet Hole Cutter and the Grommet-Installation Tools, sold separately on page 3775, to install. *Brass* and *nickel-plated brass* grommets meet MIL-G-16491D, MS-20230, and AN-230 (Army-Navy). Use indoors and outdoors.

Grommets and washers with teeth prevent rotation and loosening, especially in woven materials. ***Grommets and washers with extended neck*** have an elongated neck that reinforces the hole in lightweight materials. ***Rolled-rim grommets and washers with teeth***, also known as rolled-rim grommets and spur washers, have a rim that provides added grip.

Self-Piercing Tool-Installed Two-Piece Grommets

Grommet and Plain Washer

Rolled-Rim Grommet and Washer with Teeth/ Extended Neck

The sharp neck on these brass grommets cuts the material as you set them. To install, use the proper die set (sold below) with bench press 95715A690, sold separately below and on page 3299. Trade size refers to the size of installation tool needed and the grommet's hole size once set. Use indoors and outdoors. ***Rolled-rim grommets and washers with teeth/extended neck***, also known as rolled-rim grommets and spur washers, have teeth on the washer for a more secure grip on the material.

Grommet-Installation Tools

Punch and Die Set

Hand Press

Die Set for Hand Press

Got the grommet? Now get the tools. Create a hole with Grommet Hole Cutters (sold below) and then use either the Punch and Die Sets or the Hand Press and Die Sets to set grommets.

Punch and Die Sets

Punch and die are stamped with the corresponding grommet trade size. Strike the punch with a wooden or rawhide mallet to set grommets.

Easy-Install Two-Piece Grommets

Just snap the two parts together in a hole you've cut to size; no setting tools required. Use 96135K49 with hole cutter 9611K14; 96135K54 and K55 with cutter 9611K17 (both sold separately above). Grommets are made of polypropylene. Temperature range is 0° to 115°F, except 96135K49 is not rated. Durometer hardness is not rated. Use indoors and outdoors.

● Has a chrome plating. Does not have a slot cover.
♥ Dimensions refer to the area covered by bristles.

Round

(E) With Removable Slot Cover— Made of ABS plastic. Maximum temperature is 225°F.

(F) Slotted— Polystyrene plastic with a max. temperature of 225°F.

(G) Floor Access with Swivel Cover— They're made of ABS plastic and designed to withstand foot traffic. 5039K14 has four openings to keep cords from tangling. Temperature range is –40° to +100°F.

(H) Type 304 Stainless Steel— Handles large groups of cords. The optional cover for the 6″ grommets tilts in to allow materials to pass through.

Push-In Expandable Grommets

Flexible

Rigid

The center hole flexes to tightly hold cables, cords, and tubing.

Flexible grommets are thermoplastic and are installed by squeezing the sides and pressing them into a hole in a panel. Durometer hardness is 50A. Temperature range is 5° to 250° F. Use indoors.

Rigid grommets snap and lock into place. They're nylon with a Rockwell hardness of R118. Temperature range is –40° to +250° F. Use indoors and outdoors.

Push-In Military Specification Grommets

Manufactured to meet MIL-G-3036 and MS-35489 (unless noted), these grommets are also AN (Army-Navy) approved. They insulate and seal around holes cut into panels, while damping vibration and minimizing abrasion. Durometer hardness is 50A.

Flexible grommets are made of Buna-N rubber, have a temperature range of 0° to 250° F, and are black in color. Use indoors.

High-temperature flexible grommets are silicone with a temperature range of –60° to +500° F. Color is red-orange. Use indoors and outdoors.

Also Available: Additional Flexible MS-35489 grommet numbers 1-156. Please ask for 9307K92 and specify MS-35489 number.

Push-In Grommets

Style 1

Style 2

Style 3

Style 4

Insulate and seal around holes cut in solid panels, while damping vibration and minimizing abrasion. Durometer hardness is 55A. Use indoors and outdoors. Color is black. ***Flexible*** grommets are made of SBR rubber and have a temperature range of –56° to +200° F. ***High-temperature flexible*** grommets are made of fluoroelastomer and have a temperature range of 10° to 450° F.

Push-In Locking Grommets

Snap and lock these grommets into place with just a push. They fit a range of panel thicknesses so they're ideal around sharp edges and unevenly drilled and punched holes. Made of rigid nylon. Rockwell hardness is R118. Temperature range is –40° to +250° F. Use indoors and outdoors.

To Order: Please specify color: black or white.

Shrink-to-Fit Sealing Grommets

Just turn up the heat and these grommets will shrink around wires and cables for a snug fit. A water-resistant rubber adhesive around the inside makes the bond tight, while the flange covers imperfect holes. Grommets are polyolefin and shrink at 257° F. Durometer hardness is 45D. Temperature range is –40° to +212° F. Use indoors and outdoors. Color is red.

ID (A) Before Shrinking	After Shrinking	Flange OD (B)	(C)

Sealing Grommets for Pipe and Tube

Press Fit

Snap In

Tightly seal the gap between pipe or tubing and a panel wall, keeping water and oil-based liquids from leaking through the seams. Made of flexible PVC. Color is black.

Press Fit— A tapered inner wall expands when pipe is inserted. Durometer hardness is 75A. Temperature range is –20° to +160° F.

Snap In— Grommets bend and move to compensate for pipe misalignment and movement. Durometer hardness is 60A. Temperature range is –40° to +200° F.

Telescoping Tapered Metal Covers

Overlapping spiral coils extend and retract to protect equipment from hot and sharp chips that are too harsh for coated-fabric bellows. Covers are made of 1095 blue carbon steel. For a proper fit, choose a cover with a small end ID that's at least 1/4" larger than the small end diameter of the item to be covered.

Flat Bellows

Three-Sided Way Cover Bellows

Place these three-sided bellows over equipment for protection from liquids and particles. They have a notched opening with perforated tabs that can be removed to widen the opening. Made of neoprene-coated nylon with PVC stiffeners along the edges of each fold to enhance rigidity. Wall thickness is 0.02". Temperature range is –40° to +225° F. Color is black.

To Order: Please specify expanded length in 1-ft. increments.

Mounting flanges are made of aluminum and are furnished in six pieces.

Top Way Cover Bellows

Choose these flat flexible bellows for one-sided coverage—they're ideal for protecting equipment from light dust and mist. Made of permanently pleated, melamine-coated polyester, they resist abrasion, coolants, and oil. Meet UL 94HB for flammability. Wall thickness is 0.01". Temperature range is –10° to +200° F. Color is black.

To Order: Please specify expanded length in 1-ft. increments.

Bridgeport Way Cover Bellows Set

Upper Column Way Bellows with Rear Knee Way Bellows

Front Knee Way Bellows

Guard against damage caused by flying chips and abrasive particles on your Bridgeport machine. Made of 0.032" thick Goralon-coated fabric, the ends wrap around your machine for quick mounting and removal. You'll get bellows for upper column way, rear knee way, and front knee way; plus mounting hardware. Fits all standard 9" and 12" travel Bridgeport machines except Series II Bridgeport machines. Temperature range is –30° to +260° F. Color is black.

2963A13 ..... $557.14

Round Bellows with Cuff Ends

To install, slide over your machine's rod or shaft and secure cuff ends with hose clamps (not included). Color is black, except for *rigid* bellows, which are gray. Venting is recommended for *sealed* and *molded* bellows. *Sewn* bellows are sewn along the edge of the ID and OD, so they have a more rugged appearance.

Flexible, Molded

Flexible, Sewn

Ultra Flexible—Sealed

Made from tear-resistant polyurethane with a wall thickness of 0.01″, these bellows are extra flexible. Bellows are die cut and then welded together into one piece. They resist oils and abrasion. Temperature range is –60° to +225° F.

FDA-Compliant Round Bellows with Cuff Ends

Made from FDA-compliant neoprene, these rigid bellows slide over your machine's rod or shaft. Secure with hose clamps (not included). They're molded, so venting is recommended. Wall thickness is 0.06″, unless noted. Resist oils, coolants, and abrasion. Temperature range is –25° to +220° F. Color is off-white. **Also Available:** Custom lengths. Please ask for 95635K35 and specify ID, OD, and expanded length in 1″ increments up to 2 ft.
